It's very useful for people who need to hoist their scanner with a kite; they won't need to land it every time they need to change something.

Frank

I currently use the stock antenna for my local counties emergency services related stuff, but anytime I wish to utilize other counties programmed into it, a better antenna is always utilized. And that is band specific if we are talking about using it in portable mode. As far as using it in the house, the exterior antenna is primarily designed for the 140-150 range but does well for many other bands, and does improve other bands reception even though it is not a perfect match to those bands.

I would check some of the major scanner or ham radio retailers. I tried using a dual band antenna I bought for my ham HT to replace the rubber duckie, and definitely noticed a positive difference. (Its one of those 2m/70cm ham antennas you supposedly can tie into a knot, and then untie the knot and it returns to its original shape.)

1444. FS: scanner stuff

Newsgroup: rec.radio.scanner
Date: 2003-09-15 15:13:41 UTC
From: info@haruteq.com
Message-ID: <3f65d6db.2642994@news.cogeco.ca>
Source record: 26247

I'm no longer interested in this hobby and after cleaning
out my basement I have the following scanner stuff for sale
or trade (banjos, planer/jointer, bandsaw?):

Realistic Pro-2004 scanner with TF2
TF2 PL/CTCSS tone finder interface installed.
This external TF2 PL/CTCSS tone finder instantaniously
detects the PL tone (if present) as soon as the scanner
locks onto any valid frequency.
Modifications: high speed, 400 channels, cell.
Instruction manual for both the scanner and the TF2.
This 2004 has a weird intermittent (very sporadic)
problem, sometimes it won't stop on any valid signal.
Switching the power off for about 2~3 minutes and switching
it back on does the trick. Someday it'll probably fail to
do that so here's the scoop: this combo also includes a
spare, working and totally virgin Pro2004 & service manual.

Realistic Pro-2006 scanner with Opto456
Optoscan456 computer interface installed (covers cellular)
and a legit (upgradable) original copy of Probe (version 3)
highspeed software to run it. All manuals & docs included,
mint condition.

Uniden Bearcat 895XLT
300 channel trunktracker scanner
instruction book included, mint condition.

Optoelectronics 2210
LED frequency counter w/instruction book (no AC adapter).
The outer case is scratched pretty good.

Optoelectronics 2810
LCD frequency counter w/instruction book (no AC adapter)
The outer case scratched pretty good.

Haruteq Scanner Book, Quebec & Atlantic edition.
I discovered several brand new copies of this older
bilingual 1998 edition hiding in a box.

I'm open to realistic offers and can ship anywhere using the
postal service (or other if you specify). I'm located in
Hamilton, Ontario (Canada).

Bart Veerman.
(yup, the Haruteq dude).

Message-ID: <yJn9b.7424$3Y2.2419@news2.central.cox.net>
Source record: 26150

I am trying to build a box to use a headset with a microphone a scanner and a FRS radio. I want to be able to listen to the Scanner and communicate with the FRS radio using a PTT button on the box to activate the mic on the headset to talk thru the FRS radio. I know someone has done this and has probably put this project on the net. If anyone has seen this type of project I would appreciate any advice. I have no real electrical experience. I have made such a box but it has some bugs. I get feedback thru the mic from the scanner so it transmits both the spoken word and what is being heard on the scanner. As I said I am no electrician so I am not really sure how to rectify this problem

1448. For sale or trade

Newsgroup: rec.radio.scanner
Date: 2003-09-15 20:43:05 UTC

Hi:
I am looking to purchase a portable scanner to be used in my car. I have found two models that appeal to me. First is the 200 BCXLT. I want at least 200 channels. The second is the SC200. I like the alpha tagging feature, but it looks like the buttons may be cluttered/too close together. My question is: Does one out-rate the other in terms of reception, etc. I really want a scanner that has alpha tagging, but the buttons looked a little cramped on the the SC200. Can anyone give any feedback on these two models or recommend a different model altogether?
Thanks

>
> How does it stack up against the Diamond D-130J?
==========

I have one of the Pars, currently not in use. When I had it up
I wasnt really overly impressed with it. Its biggest drawback is the
UHF and 800-900mhz elements are not directly tied to the main
element, which seemed to give somewhat lower performance. Im
currently in the process of testing a discone, the "the new and improved"
scantenna, a scan king , and the Par on my VR5K. I think the VR5K
is going to give me better results than trying them on a scanner. The
Par's biggest asset is its strength, for me in Iowa when the ice storms
hit thats fairly important. To directly answer your question the discone
beats the Par for general reception. So far Im not overly impressed with
the scantenna, it works but I think its going to be too flimsy for the nasty
winters we get sometimes. I had one up before and the ice brought it
down, and I dont want to be doing antenna work when its -0 F with
20mph winds. That 1.7dbi gain figure is for VHF and since they are
using dbi instead of dbd that isnt saying much. There isnt a general
coverage recieve antenna out there that is omni directional
that has any real gain. Actually the Par is very similar in performance
to the RS 20-176 for 24.95.

I am quite sure it was actually SCBA (Self Contained Breathing Apparatus)
and the reason why they probably said to leave the immediate area of the
fire, is that there are many/multiple carcinogens and poisons in fire gases.
It is also a requirement as well I am sure too......

You might try moving the radio or antenna just a foot or two ... might make all the difference. I have to do that when picking up WTKM 104.9 FM from here ... some 35 miles distant ... moving the radio 6 inches can make or break the signal.

Or look around for someone that still has the VX-5R in stock; most of the
7R's major features, for a fair bit less.

Ummm.. That's MINNESOTA, not Michigan he is talking about there... I don't know which type of modulation Michigan uses, but it seems Minnesota is still out of luck when it comes to proper monitoring of the digital system...

I have some. No, you can't re-program it, since the frequencies are in an EPROM or ROM in there. The priority, I dont really remember if you can turn it off. It's actually designed to specialize in picking up local simplex police transmissions, like on mobil repeater mode and car to car, thereby warning you that there is a cop nearby. Pretty good in its day, but falls short in this age of digitization of these transmissions.

I got a full-size one that is a combination auto workshop and woodworking
shop. It's amazing what you can do in limited space if you hang everything
up and build good workbenches...
I even got Acetylene torches and Welders in it.
Next year, we put in the big air compressor in the back.

1468. Scanner advice needed please (UK)

Newsgroup: rec.radio.scanner
Date: 2003-09-16 14:38:43 UTC
From: Henry <henry@spamtrap.com>
Message-ID: <bk779kjvk1@rdel.co.uk>
Source record: 26171

I am looking for a scanner so that I can have portable coverage from 100 kHz to at least 850 MHz, with SSB/CW as one of the modes.

I have tried the Alinco DJ-X10, and returned it as faulty because the performance was awful (very deaf below 90 MHz with the supplied antenna, and blocked horribly with a short wire), and have been told that it was in perfect working order.

Any suggestions for an alternative that I could try around the same price that will give reasonable sensitivity down to 100 kHz as a portable (no wire antenna), and with minimal or no blocking if a wire antenna is attached.

regards

Henry

I was wondering. I have a cheap normal radioshack home based scanner, which
works fine. It doesn't trunk track or anything, but my PRO-95 does all that :)

I pickup all the weather stations from my house with both.
So I figure I'm picking up tons of information.
How much would it cost me to build or make a home made antenna
that can go outside or inside and pickup more freqs?

Kev
http://www.scanthis.com = # 1 site for all types of freqs.

It cant, of course, but the bulk of these close field transmissions that would trigger the warning light off while you were on the superhighway would probably be on police frequencies. At least, on police frequencies of yore... It worked pretty well, actually, and many times a few minutes after the light would go off, sure enough, you would come up on a cop.

No antenna is at DC ground, if it is going to function as an antenna. As far as static building up on the outer braid of coax, if you have your antenna firmly mounted to the pipe metal to metal, then grounding the pipe at the bottom is as close to "grounded" as you are going to get, and this will ground any "ground" radials that are not active elements of the antenna, and usually put the shield of the coax at ground, also. There is a more important reason to ground the antenna pipe, and thereby the shield of the coax. It keeps local electrical noise and interference from penetrating into the coax , and raising the noise and interference in the reciever. The signals you are trying to pick up on the scanner or radio are hundreds of times weaker than a lot of local noise is, and the noise will tend to over-ride the signal if this is not attended to. (the coax actually acts like an antenna when the shield is not at ground).
This will tend to severely limit your hearing range on the radio , especially in locations that are rife with electrical noise , like in the city, near a factory, etc, etc, etc

My AOR8000 is very impressive Below 90MHZ. So impressive on in fact, that I sold my Dedicated HF Receiver! I'd recommend it to anyone, and as it's quite old now you may want to go for the AOR8200. They're sure to be even better.
A friend of mine has a DJ-X10, and my 1986 Yaesu FRG9600 proved much more sensitive. I consider that a pity, because the X-10 is such a compact but capable scanner compared with others.
Another one to consider is the Yaesu VR500 (the handheld, not VR5000!). Probably the smallest scanner to have SSB e.t.c. Just a pity they couldn't incorporate the Yaesu VX-1 transciever into it, with it's incredible battery life e.t.c.
Have fun.
Joe Landy
P.S I use a crossed-dipole for most VHF and UHF reception, I made it for weather satellite reception, and it proved better than my discone and moonraker vertical.
I use a home-brew longwire for HF reception. Ideally I'd like to buy a decent HF vertical, but neighbour co-operation is already stretched to the limit!

I reply:

Uh, I hear the Michigan State Police just fine using the PRO-96. It
decodes the digital signal flawlessly. As far as the DNR goes, it
uses the same APCO-25 trunking system as the Michigan State Police,
so, I would assume that I can hear it (although there don't seem to be
any DNR transmissions in the Detroit Metro area.

anyone out there going to try and monitor \
police and fire comms in the suggested area of which isabel is possibly
traveling??
if so can u update us on how intense and or if any comms fail??
also any ipn members in that area??
thanks
ron

Uh, i "got that notion" from every single book on the subject, i own, from about 30 years of antenna experimenting, winding my own baluns, building my own beam, vertical, loop, and horizontal dipole, zepp, and other antennas. I might ask YOU where YOU got the notion that "RF ground and DC ground are two seperate things". They most certainly are not. ground, my friend, is ground, period. if you are going to ground the signal element of an antenna, you are going to either get nothing for a signal, or a highly reduced signal, depending on just how long your ground path is. ground is a funny thing at RF, and it becomes progressively more difficult to get a good one as the frequenncy becomes higher. Yes, there have been antennas that were buried in the ground, but that would refer to antennas that operate in frequency ranges so low that it would have little or nothing to do with scanners ! (when was the last time you listened to 160 meters on YOUR scanner) ? I get extremely tired of being second guessed by people who *** think *** they know something, and know almost nothing about the subject under discussion, and like to adopt an opposing, diametrically opposed view point on almost everthing, like yourself, simply for the sake of being "different", and stirring up trouble basically. I dont know where you studied antenna theory , but what you had to say here is seriously "out to lunch". I am certain that Bill Orr would be glad to argue with someone like you, he was the author of quite a few thick tomes on this subject, and was world famous. I wont waste the time on you. Sorry. Life is far too short to waste on this. ground is ground. anyone who knows anything knows at least that.

Hardly true at all. The antennas that I use here on HF are all directly grounded
at the matching transformer. I could take you out back and we could run the
meter between the antenna itself and the ground rod and you would find it to be
a direct short. That's a DC ground, not an RF ground. Then I could take you
inside and have you try to tell me that reception was reduced. LOL

Va Beach and Norfolk are on Motorola trunking systems. These are analog so there are not APCO25 and don't require the new "digital" scanners. Va Beach was still using Type I talkgroups last time I checked but Norfolk is using Type II.

Newport News is also on a Motorola Type II trunking system (analog). The city of Hampton uses an analog EDACS system (actually 2 systems).

All of these can be monitored on just about any trunk tracking scanner.

I don't know about any other systems in that immediate area.

John

Yes, life is to short to waste explaining to someone who thinks he 'knows it
all' the difference between RF and DC ground.

Get back to us when you finally pass 'Antenna School'.

This is not exacly what you asked for, but why not see if the FRS radio has a VOX option. If so, you could put the FRS radio next to the scanner and it would transmit the sound from the scanner....

Of course, that may not be legal....

Glad to hear that, and if you chat with anyone actually recieving the DNR communications as well, PLEASE let me know.
It will make the difference of whether or not I am gonna get one of the PRO-96's.

Thanks,

You know, the key word here is "matching transformer". Obviously, you dont get the fact that the "matching transformer" may isolate these from ground at RF , but that does not mean that RF ground is a different entity electrically from standard ground. so you have a balun or tuned circuit in place. big deal. many antennas use this arrangement, since they have to radiate from all the elements. (there are no "grounded" elements.) I think it's about time you bought a few books on the subject, since anyone with any experience can see that you are operating from "assumptions" rather than hard info. I have an antenna tuner as well, but i dont make assumptions and draw conclusions concerning its functioning, the way you have. the tuner does nothing to "change the nature of ground", my friend. It simply BLOCKS the antenna from being grounded in a reactive sense.....
and from this reactive isolation, you have drawn the conclusion that there is some nebulous "RF ground" that is completely different from "earth" ground. I can assure you that this is not the case.

1506. Embarrassing Moments Caught on Tape

Newsgroup: rec.radio.scanner
Date: 2003-09-17 21:10:09 UTC
From: dlizama@nashentertainment.com
Message-ID: <21c8f9ef.0309171310.4b214f1c@posting.google.com>
Source record: 26109

I am a Segment Producer with Nash Entertainment and working on a FOX Television special tentatively titled "Embarrassing Moments Caught on Tape." I am searching for blooper-style law-enforcement video.

I'm basically looking for silly stunts, accidents or mishaps by criminals/ suspects where the action is caught on tape--lighthearted stuff where nobody is seriously hurt but where the viewer is left wondering, "what were they thinking?" We are not trying to make anyone look stupid, rather we are demonstrating the unpredictability in life and how it is often funny and hilarious.

We pay a reasonable license fee for each clip we use and our clearance department will negotiate the licensing fee with whomever owns the tape. We license footage based on the visual appeal of the 'caught on tape' aspect of the footage. We also will pay a 'finder's fee' for referrals that lead to bonafide 'caught on tape' tape; that is, where we actually license footage from someone to whom we have been referred.

Keep in mind that the most appealing aspect we look for is spontaneity since we are not looking for footage that has been "staged" or in any way shot with the intention of misleading viewers into thinking that it was anything but genuinely "caught on tape."

Please call or write me soon if you or any of your members would like for us to consider video footage for inclusion in our show. I can provide my FEDEX account for overnight shipping purposes.

Do you know of any other clubs or groups that I could also contact for this type of request?

Thank you for your time and consideration. I look forward to hearing from
you and your members soon.

Sincerely yours,

David Lizama

Source record: 26111

I have a RadioShack DX-398 All-Band Shortwave Radio 4 Sale. This radio is the same as the Sangean ATS-909 except the AC adapter and reel antenna are not included and the color is black.

For additional information see the following Internet web pages:

http://www.grove-ent.com/ATS909.html

http://www.transistor.org/collection/radioshack/radioshack3.html

http://www.rnw.nl/realradio/ats909.html

A copy of the DX-398 Owner's Manual:
http://support.tandy.com/support_electronics/42500.htm

I have the original box, manual, and the carrying case.

The DX-398 is in excellent condition and works fine. The selling price of $110.00 includes shipping costs within the continental United States.

Please email me direct if you are interested. Do not reply to this message. My email address is: rbird2@peoplepc.com

Thank you,

Rodger

May I take exception with your statement? Many antennas are operated at DC ground. A J-pole, and any beam that is of "plumbers delight" construction come to mind as I type.

As far as the shield contributing to noise, pure nonsense. If the shield and the center conductor are connected to the radio it has an RF ground from the antennas counterpoise. In the case of a long wire, a ground is necessary to provide a counterpoise. A ground rod does a very poor job of providing one. The main reason for a ground rod is lighting protection, and static a bleed off path.

No grounding system in the world will remove common mode noise.

Dude. Tell the guy holding the gun to your head and forcing you to read this
stuff to back off.

This guy has had a reply like that coming for a long time. Notice that he's
quiet as a mouse now. Sometimes you have to deal with people on their own
level. I don't know what kind of doctor you are but even an average joe like
me knows that.

Think on this good doctor, not only did you click on a header that by it's
very content denotes an off topic flame is contained therein, but you then
perpetuate it by responding! And *I'm* the one with a language deficit? HA!

Tell you what - since you're so butthurt over it, I changed the subject
line. Happy now?

Sheesh, some people's kids...

You can take exception all you want, but if you study any antenna design you will find that it either has grounded elements, and the active element is not grounded, or it has some kind of reactive isolation of the active element from ground. the antenna simply cannot function unless one of these conditions exist. period.

byt he way, what do you think this "counterpoise" IS ?

As far as common mode noise, i was not referring to common mode noise. I was referring to noise that penetrates the un-grounded shield , which is about as effective as a shield when not grounded as wet toilet paper. All this info was well known and written about 50 years ago . Where have you been ? Now, the fact is, when you ground the antenna pipe , on a 1/4 or 1/2 wave vetical antenna , you usually ground the shield of the coax also , since the GROUND radials on these antennas are designed to be hooked up to GROUND. They therefore are usually made so that these ground radials have a connection directly to the anntenna mount where is clamps to the pipe, in order to facilitate this grounding. I cant believe i have to keep explaining this stuff , that any NOVICE had to know a few years back, to you people. Your wonderful "j-pole" does NOT operate at ground, since it is a stub tuned antenna, and this is what provides the isolation for the active element, jesus , get a book and read it once in a while , will you, instead of spending all your time on here talking sheer idiocy ?

What next , hambrecht ? Are we going to discuss rhombics ? and what would that have to do with the average scanner user, that uses a 1/4 or 1/2 wave vertical for an antenna ? ABSOLUTELY NOTHING. So far, we have heard from people about their "hf wire antennas", we have heard from you about "plumbers delight" beams (which , by the way still need a matching system) , and we have now heard this "the antenna is directly grounded" nonsense from you, all over again. Long wires ? I was probably running one when you were still in diapers....
By the way, i never said the shield on the coax "contributes to the noise". that is not what i said. I said, for all practical purposes, that if you dont ground the damned coax shield, then it electrically does NOT EXIST. Sure you have a ground on it in most cases , if it is hooked to the rig. the rig either has a three wire cord that provides a ground (not to mention the white lead in the ac cable, that is hooked to the same place), but you should have grounded the rig's chassis to ground yourself anyway, to shorten the ground path ! (you DID ground the rig, didnt you ?) What was that you say ? the rig runs off a 12-volt power supply, and there are only two leads to the rig, plus and minus ? then you better go out there and drive a ground rod ! because the CHASSIS Of THE RIG IS NOT GROUNDED ! (and neither is the shield on the coax !) It's an epiphany. Oops sorry about those 10-dollar words ! I got that bad habit by actually studying to GET MY LICENSE. No dick bash books around here..... quite a few Bill Orr, ARRL, Bill Cheek, etc... but no bash.. hmmm.

I know I shouldn't feed the squirrels, but...

All those books, all that education, and you still don't understand the simple
concepts of DC ground and RF ground.

Amazing, truly amazing.

On 2 meters I use a copper J-pole. The entire antenna is soldered pipe and any point can be measured to ground with an ohm meter and is at DC ground. The antenna is fed a few inches up from the bottom with the braid going to one point on the DC ground and the center lead to another point on the DC ground. The RF impedance is in the area of 50 Ohms.

I have no earthly idea what you are referring to when you use the term "reactive isolation". Once any reactive element is brought into the equation, we have left the DC world.

DC ground is included in no antenna equation I am familiar with, but I stand ready to be proven wrong.

I reply not to be argumentative, but in the furtherance of knowledge.

I don't know if I'd go Hot Glue and leather.. sounds like it would fall apart at the hot glue seams. Maybe a few stitches would reinforce that better?

I see that Zombie Wolf is carrying on in the finest Bill Cheek tradition here on r.r.s. Bill loved raunchy foul mouthed personal attacks and perpetrated them at every available opportunity (which was most of the time). I suspect he's up there somewhere in heaven rolling on the floor in laughter every time he reads a Zombie Wolf post. It's almost as if he never died. Bill would be so proud of Zombie Wolf. Now if the Zombie would just site some references instead of making groundless assertions, we could all have a good laugh.

yep and then i can spend a month educating you , as well. I dont think "damned" really falls into the category you are talking about since it is even allowed by the FCC , Emily Post.

As far as Bill Cheek being proud of me, well, that would be a great honor. Unlike YOU, he actually knew somethng about the subject at hand ...

Now let's see- you want references to find this stuff ? well, buy some books on the subject ! You can start off with the ARRL Antenna handbook , then move on to the Vertical Antenna handbook (same source), then you can get "Building and using your own baluns" from them. That ought to keep you busy for at least the next millenimum. Then you can try a few Bill Orr books , just to round you out . since Bill Orr was quite a prolific (and knowledgable) writer and authority on just about any facet of radio, you have your work cut out for you there. Then you can pick up a few Bill Cheek volumes , (Another good solid source of info), if you are very lucky, and maybe his excellent newsletter, if you can find someone willing to part with theirs (I'm not). That about wraps it up for "references", pal. I have a lot more stuff, but for a beginner like you, these will provide a solid grounding (pun intended). I doubt you are going to grasp this stuff anytime in the near future, since if you didnt grasp the previous, simple to understand posts, it's unlikely that you are going to grasp the difference between balanced and unblanced lines , resonance vs non-resonant, smith charts, reactance, tuned circuits, velocity factors, the superhetrodyne reciever, Q factors, or about 300 other concepts that are about 14 stories over your head. But dont let it stop you from at least TRYING....

Having books and having comprehension are two different things. When asked for a reference, one does not state a list of ARRL books.

It is this writers experience that a person that responds with vitriolic messages and personal attacks has little else to substantiate an argument.

Your understanding of DC and RF ground is rife with misinformation, your blustery comments to the contrary.

Had you a real grasp on the subject, you would lead us neophytes down the path of understanding step by step.

Multi frequency system that is computer controlled. "Channels" are not used. Instead, computer-assigned, "talkgroups" are used. Communications traffic on one talkgroup can be assigned different frequencies on a first-come first-served, basis.

A conventional scanner cannot follow a specific conversation, due to this system. A trunking capable scanner can follow this traffic easily. A more advanced trunking scanner, like the pro-92, 93, 95, and 96 can also allow you to put alphanumeric "tags" on talkgroups, thus allowing you to identify them at a glance.

Check out Lee's Electronics BP1700 NiMH battery for $24.50

www.leeselect.com

No, I don't work for them - but I did see their ad in PopCom and
ordered one for my 245xlt.

I used to drain the life out of my factory battery constantly - now it
sometimes takes several days before I need to recharge (or course,
your mileage may vary depending on how much you use yours).

Definately worth checking out - good luck!

ground the chassis , to a ground rod driven in the ground.
This will also take care of grounding the coax shield, if you use coax. In the case of a long wire, the ground is a mandatory item, if you want the antenna to work right.

Well, I got my new scanner antenna up down south today. Works great only had one small problem.
I was testing away and thinking how great I had done when my girlfriend came out and asked why the lights were not working in the front of the trailer.
I guess I use a little longer screw then was needed. I changed the screws out on the mass support and put a new fuse in and the lights work.

The new antenna sure beats the rubber ducky I have been using on my BC245. I had to lockout a lot of freq.'s!!

^ The new antenna sure beats the rubber ducky I have been using
^ on my BC245. I had to lockout a lot of freq.'s!!

Receiving too much is a very annoying problem. In some cases setting attenuation on those channels is enough. In other cases I've had to move the frequency to a radio that has tone squelch, then I permit only the applicable tone. Another option would be to put those frequencies on another radio with the rubber ducky again.

I'm no longer interested in this hobby and after cleaning
out my basement I have the following scanner stuff for sale
or trade (banjos, planer/jointer?):

Realistic Pro-2004 scanner with TF2
TF2 PL/CTCSS tone finder interface installed.
This external TF2 PL/CTCSS tone finder instantaniously
detects the PL tone (if present) as soon as the scanner
locks onto any valid frequency.
Modifications: high speed, 400 channels, cell.
Instruction manual for both the scanner and the TF2.
This 2004 has a weird intermittent (very sporadic)
problem, sometimes it won't stop on any valid signal.
Switching the power off for about 2~3 minutes and switching
it back on does the trick. Someday it'll probably fail to
do that so here's the scoop: this combo also includes a
spare, working and totally virgin Pro2004 & service manual.
$300 U.S. / $450 Cdn or best offer.

Uniden Bearcat 895XLT
300 channel trunktracker scanner
instruction book included, mint condition.
$125 U.S. / $175 Cdn or best offer.

Optoelectronics 2210
LED frequency counter w/instruction book (no AC adapter).
The outer case is scratched pretty good.
$40 U.S. / $65 Cdn or best offer.

Optoelectronics 2810
LCD frequency counter w/instruction book (no AC adapter)
The outer case scratched pretty good.
$60 U.S. / $95 Cdn or best offer.

Haruteq Scanner Book, Quebec & Atlantic edition.
I discovered several brand new copies of this older
bilingual 1998 edition hiding in a box.

Scanner Modification Handbook 1, Bill Cheek
Scanner Modification Handbook 2, Bill Cheek
The Ultimate Scanner, Bill Cheek
$25 U.S. / $40 Cdn for the 3 of them

Monitor America, 2nd edition, Scanner Master

Monitor America, 3rd edition, Scanner Master
whatever, best offer.

Shipping extra on all items, I'm open to realistic offers and
can ship anywhere by postal service (or other if you specify).

Bart Veerman.

Hello from Amsterdam,

Last week bought a combination of the aor -8200 latest model and the Aceco FC 3002 a 1mhz-3ghz rf finder also available from other brands like optelectronics etc.
In my manual i cannot find anything about how to let it work together i have the right cable from ar8200-8 from Thiecom .
PLEASE let someone who has more brains or has more knowledge from these things give a reaction (tune).
I like the reaction tune so hopefully i get more reaction from the readers of this newsgroup then i have until this moment from my i thought supercombination to discover all hidden transmitters in my small town.
Thanks in advance for any reply and please make me happy!

Robert (TUSCHINSKY) one of the eight eBaY EMBASSADORS in the world.

The "boxes" or equipment cabinets contain the radio base station
equipment, which includes the radio transmitter and receiver
equipment and site controller.

Howdy Burr,

I was monitoring this incident from when the call went out (just after 11:00 am) to its conclusion. There were only 2 fatalities in this and three others (including 2 children) were air-lifted to MLK and Children's Hospital. According to CHP comms, the vehicle was WB 60 in the #3 lane (second from the right) when the driver lost it, crossed the #4 lane and went over the side. I am familiar with the location of where it occurred and there is a steep embankment where the vehicle went over.

Very tragic indeed.

Glad that's all there was to it. I heard some kind of engine
report the four dead and still had one more in the rear. I
went through the area Thursday and came back to the 10 then
turned east.

> acept these crystals?

I haven't seen alot of scanner radios being made NOW that accept crystals, but there are a ton on the used market, that you could find. Garage sales as well as hamfests yield good results. If it is not worth repairing, then finding one this way might be worthwhile. Granted the old rock-based scanners aren't as fast and definitely limited on the amount of frequencies, but they typically have an awesome sound to them, and of course there is the "nostalgia" factor as well.

I personally collect "rock-based" (crystal) scanners working or not. Let me know if you choose to not repair it, as I might be interested in it for parts.

Hi. . .

I have an Alinco DJ-X2000 scanner and I'm having trouble connecting it to the computer to use the computer control software. I have the correct RS232 serial cable and the scanner is connected properly to the computer using this cable. When I start the software and click on 'read from scanner', I get a message "a communication error occured: 1.". And then "Cannot find DJ-X2000". I assume that I am having a problem with the port configuration.

Can anyone help me figure this out? How can I find out what comm ports I have physically on this computer, and if they are being used.

I love this scanner, but really need to use the software to help program the freqs. into it.

Thanks in advance, Barry

If those radios have plastic chassis then a convenient grounding point would be the antenna connector. Either solder a wire directly to the connector or insert a T adapter with a ground wire soldered to it.

Inside is the receivers) and Transmitters for the Cell site, and a few other stuff, but yes there is cooling fan's inside due to the heat made from the transmitters and from day time heating. I had a chance to work on and with Cell site's when I work for Motorola until they lay-ed me off. It's was some cool stuff.

1593. Entering Trunked Info Into 780: new user questions, please

Newsgroup: rec.radio.scanner
Date: 2003-09-22 13:47:21 UTC
From: Robert11 <rgsrose@tiac.net>
Message-ID: <J3Dbb.59385$NM1.21164@newsread2.news.atl.earthlink.net>
Source record: 26095

Hello:

I'm retired now, and thought I'd take up a new hobby.
So, I just bought a 780, the Arc780 software package from Butel, and
the ScannerMaster and Police Call books.

Whoever wrote the manual for the 780 should be fired.
They spend a zillion bucks on developing these radios, but can't put a
reasonable
effort, in my opinion, in the manual, so a true first time beginner, can
make sense out of it all.

Was able to get the Conventional frequencies loaded, and going, though.

If anyone can help me out a bit, I would truly be most appreciative.

My questions concern the Trunking aspects.

I live outside of Boston, and would like to hear the trunked Mass State
Police
two way conversations.

I understand that these are Motorola II.
Not sure what "Plan," though ?

1. In the Scanner Master book, 9 ed.,, page 124 for Troop A/H:

Are these listed 856. xxx, etc. frequencies "Control Frequencies" ?

2. If not, how does one go about finding the Control Frequencies to enter ?

3. In the Police Call book, page 283:
Are these numbers like 33200 what's called "Talk Group Tags"

4. Which does one enter in the 780 ?

-Frequencies, or Talk group Tags ? Both, or either?
-Does either "get you there"

5. For anyone using the Butel 780 software:

When one goes to TRUNK from the main page, an Edit ID List comes up.

It has columns for ID, and one for TAG.

What goes in each ? The Talk Group Tag number (in which column?) ?

Or, are you supposed to enter Control Frequencies?
If so, where would they go ?

Much thanks,
Bob

You will want to add both the freqs and talk groups(numbers like 33200)
into the scanner. The "tags" is going to be like Police, Fire or
whatever you want them to be called. Now onto the 780 software. You will
want to put the talkgroups(the numbers like 33200) in the first column
and you tags(police fire ect) in the second column. For more help on the
software I suggest joining the arc780-software Yahoo group found here
http://groups.yahoo.com/group/arc780-software/
All in all the manual is written pretty well once you understand
trunking.

Dwayne:

Much thanks for reply.
Am a member of the software group, but thought I'd try here first.
Have always gotten quicker replies here.

Could you just tell me about this, if you get a minute:

If I put in the talk group numbers as you suggest, what about
the control frequencies ?

I'm real confused about the necessity about (also) putting in these Control
frequencies.

Is this too required ? Where would it go in the software?

And,

In the Scanner Master book, 9 ed.,, page 124 for Troop A/H:

You would put all the freqs in whatever bank you want them in. Make sure
you turn trunking on for each freq(3rd row over). Click on trunk at the
top and choose system settings and set bank 1 for Motorola typeII 800MHz
(I think you said it was a typeII). Click on the trunk again and enter
in the talk groups you want to hear. Under the setup at the top you can

select Bank tags and name the bank to what you want. Where ever you see "tag" is where you can put a name in for the ID or freq. If you have anymore problems we could go to email and I could send you my mem file so you could see what it should look like.

Solder the ground wire to the shell of the coax adapter, then run it to the common ground point.

Does anyone have info on the MATEC 615 "tuned receiver" (that's how it is described)?

What is it, specs, when made, etc. I couldn't locate anything searching the web.

Thanks!

Ouch!

1610. The average scanner listener

Newsgroup: rec.radio.scanner
Date: 2003-09-23 17:04:36 UTC
From: "J.C. Jones" <>
Message-ID: <78dbaa8d64e41b7044e282066ca8cad6@news.teranews.com>
Source record: 26013

The average scanner listener from years of observation...sorry if this offends.

5' 71/2"
320 lbs
48" waist
28" stride

Highschool (the MIT of scanner listeners) nicknames:

Frumpy
Pudgey
Dumpy
Stinkpot
Stinky
Smelly
The Round Mound of Artificial Ground

Radios clipped all over him, and he doesn't know when to turn them off. The seat on his bluejeans hanging almost to the ground. Doesn't use deodorant because "I have a reaction to it". As digusting a sight as you'll ever see or smell.

Teranews is hardly anonymous. What do you want to do, email his ISP and tell them how your killfilters are so very difficult to operate?

Perhaps if you'd brush your teeth more than once a year the smell would go
away.

Hello,

Does anybody have a schematic of a interface cable to connect a Yaesu
VR-120 to a PC?
For Icom there exists the OPC-478 cable. I've read that it can be used
to download data
from the VR120 to a PC, but uploading seems to be not possible.
For this OPC-478 cable are schematics availablle on the web.

I've seen some circuit with 2 transistors, but I was wondering if
there is a schematic with
a MAX232 which works for download and upload for the VR-120 as well.

Thanks for your help,
/Marc

This shouldn't be a problem, as long as you keep them reasonably seperated.
they are both receiving antennas , so there is unlikely to be a problem with
interference.

Because something needs to be done about these obnoxious, smelly, fat, out of shape & horrifically boring scanner listeners. They are the ruination of good, decent communications enthusiasts with their constant "can you top what I heard" attitude & downright illegal actions. Plus, they are taking up more than their fair share of blue jean material with their massive 48-60 " waistlines and 28 " strides.

It's time someone put their foot down and that foot is me!

7!!! Me thinks your rating system needs revision, 3 is probably the best
this person rates.

The best he can do is scanner listeners look and smell funny and a lame
assed attempted at mocking simple oneupmanship. How many hobby groups
don't engage in those types of conversations? Last time I checked sharing
experiences was an intergal part of any hobby.

This one needs to do some serious research on how to troll....

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 2001 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises
http://www.grove-ent.com but views expressed in this
article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229, email: electra@tcon.net,

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Multec Communications repairs several model Uniden scanners, but not Electra models. (http://www.rfwiz.com or email multeccomm@rfwiz.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is

temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: BC700 Will Not Stop on Active Frequencies |

Over time, Cliff Sharp's BC700A became less and less able | to stop scanning when it hit a signal. For the last couple | of months it would not stop at all, even on the strongest | of signals. |

Adjusting the discriminator coil so that the superimposed | DC voltage of the discriminator output was 1/2 Vcc fixed | the radio. Note that the sound was only distorted enough | when misadjusted that sine waves appeared a TINY bit | nonsymmetrical. There was no significant distortion in the | audio from the misadjustment. Further checking showed the | range of the discriminator output is not fully to Vcc; with | 10V on pin 4 (supply), noise peaks are only 8V and flat- | topping there. |

So Cliff readjusted the output to have 4V superimposed on | the signal, with no change in functionality. Sine waves | appear much more symmetrical now. |

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. |

Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855.

Batteries Plus has stores across they country and some have
rebuilt Uniden NiCd packs for under $20.

Source record: 26042

Hi Guys

The only negative Ihave read is that the audio quality is very poor and there is a rather complicated mod to improve it.

I have a pro-2045 and it is my only reference and it sounds fine, not tinny at all.

Opinions?

thx

bob

(sorry for the crosspost from alt.scanner)

Get a soldering iron, turn on the radio and start heating components until it quits. Replace the one that caused it. Normally it will be a capacitor that is the problem.

Sorta like tune for maximum smoke and replace all charred components. ;>)

another 245 ?

anyone know for sure which rat shack adapter fits on the
radiao shack a/c adapter??? Yea I know its a little confusing.
I'm talking about the little adapter part that fits in the radio with
a two prong plug that fits the a/c adapter cord. The have letter
designatiions... I got the H version because it looked like the best
fit, but I'm not sure its the correct one, because I'm having problems
chargiing the battery.

Surely this not some special type of deal you have to buy from
uniden......

<steelgtr_95127@yahoo.com> wrote:

>How does it stack up against modern scanners?

The R7100 is not a scanner. It is a communications receiver.

That particular model is a piece of junk. Two bad FETs,
underspecified, were installed at the factory and there is an ultimate
100% failure rate on them. Replacing them is fairly involved. We used
to service the things.

The R7000 is/was a winner. The R7100 was trash and not worth the
postage to ship them. Same with the R9000 in all versions.

The R8500 is a pretty nice little receiver for the price and is
reliable and reasonably rugged. We sold many hundreds of them before
we got religion and got divorced from ICOM.

The R100 (NOT PCR-100) was a nice mobile receiver also.

ICOM carries all receivers in its amateur line, not the commercial
line, so that tells you something about their own perception of the
product.

The R7100 also had a noisy IF, full of spurs. Other problems. We
documented them, ICOM engineers kept promising a fix, and finally gave
up and discontinued the thing from production relatively early in its
life cycle to avoid the hassles. There was a gap while the R8500 was
being designed, and it was and remains a friendly little receiver.

For hobby use I'd go with an R7000 which are inexpensive anymore, or
an 8500. Don't touch the 7100 or the 9000. We no longer will service
either of the latter, and never enjoyed servicing them when we were an
ICOM servicing dealer.

For professional use, consider a professional receiver, used if
necessary. W-J/CEI, Rhode & Swartz, Harris, Microtel, Cubic or one of
them. A completely different experience.

If the circuit breaker inside the power transformer was bad,
the scanner would be dead and stay dead.

Based on your description, I would first replace Q204, a TIP29
transistor located on the Feature board. When you install
a new one, install some type of heat sink to the tab to prevent
the replacement from overheating. I sometimes homebrew a
small heat sink from 2 solder lugs and fastening them
to the tab using a screw, lockwasher, and nut.

I have several 2006's as well as a 2004, a 2005 and a 2045. While there are other radios with better receive audio quality the 2006's is no worse than any other scanner out there. You can improve the audio quality by improving the speaker used, I have had good luck using refurbished surplus GE Mastr2 speakers as well as Motorola mobile speakers.

I ran a 2005 in my cars for years until last February when I bought a new car and replaced the 2006 with a BC780. Since my mounting required an external speaker I used a Moto speaker purchased at a hamfest and it worked fine.

I have not done any of the published audio mods on my 200x series radios, never felt the need. I have a 2006 on my desk at work, 2 in the shack at home and another in storage. The 3 I use every day seem to have plenty of audio punch, the 2005 I used in the car(s) for about 10 years drove an external speaker just fine in a mobile enviornment.

The 2045 seems to have decent audio as well. I despise the button layout however, being so used to the 2004/5/6. Mine also has a pretty loud transformer hum, so I run it on 12 VDC instead. Receives fine, just a pain to program.

I've had two, no problems at all, running 24/7 for several years. They were a nice reciever. I bought both of them used, one from a friend, and one from a guy in this group. Neither had been touched, and both were over 2 years old. They do run hot on 110, but on 12 volts they are nice and cool. I only got rid of them because I needed cash to buy a new PC.

One of them was bought by a friend and it's still chugging along, no problems whatsoever. It's got to be 11-12 years old.

7000's are decent, but there are caps that need to be replaced on a lot of them and some of them are 17 years old, and getting creaky, solder joint and display wise.

Either turn off the monitor or see if an LCD display will cause less
interference.

Not much you can do but get the radio away from the PC.

I don't know if it will do any good (probably not), but maybe try changing the refresh rate on your monitor. The reason I suggest it is that it's about the only setting on your computer that you can really fiddle with easily, that could be a source of interference. It's possible that your monitor might produce less emissions at a different refresh rate.

1671. 7.5 KHz Step Increment Question ?

Newsgroup: rec.radio.scanner
Date: 2003-09-26 15:10:36 UTC
From: Robert11 <1234@tiac.net>
Message-ID: <MFYcb.14461$ai7.5056@newsread1.news.atl.earthlink.net>
Source record: 25974

Hi,

Have a 780

Question concerning step sizes.

Let's say I have a bank I would like to scan that has frequencies preloaded
in
it for which a 25 KHz step size is probably appropriate.

These might be, e.g.,
xxx.5000
xxx.2500
etc.

Now, if I add one or two freq's in this bank for which a 7.5 KHz step would
seem right, e.g. xxx.9875, what happens ?

a. If I leave all the steps at 25 KHz, does it just skip over this xxx.9875
?

b. Does the radio round it to something commensurate with the 25 KHz steps
set for all the freq's
in the bank (which I guess would mean passing over this freq. ?) ?

c. BTW: where does the stepping increment start from? Is it always
xxx.0000 ?

Thanks,
Bob

The bc780xlt doesn't program step sizes by bank, it is done by frequency.

> a. If I leave all the steps at 25 KHz, does it just skip over this
> xxx.9875 ?
Depends on the frequency range, different ranges have different default
step size. If the frequency entered doesn't fit within the specified
step size progression it will change to the closest frquency.

>
> b. Does the radio round it to something commensurate with the 25 KHz

See above. If you forced all of the channels to 25k, it's time to go
back and reread the manual.

> c. BTW: where does the stepping increment start from? Is it always

Bob; I took out the power transistor with the 3 leads soldered and can't find one now. Rat Shack does not have them and still looking on net. It was real hot if that was proble, Allaround it seemed blackened from heat but not blown. Hope that is what it is. Not even sure of name. Would sit under the soldered side under the power transformer and from the underside near the largest can capacitor and has a tri axial lead near the squelch wire solder point. It has a hole on top but no heat sink of any kind to disapapte that kind of heat. Says from what is readable Texas Instruments and some number but no rating etc. Any more help here. nick

Nick,

Stepping back a bit, I should have suggested you
try powering the BC-250 from a good, external 12 - 13 VDC
power supply instead of from the AC wall outlet.

If the BC-250 works consistently well for a long time when run from an
external battery or 12 - 13 VDC power supply, then I would
suspect a defective component in your BC-250's power supply stage.

I'm not sure I understand which transistor you removed.
If it is under the main power transformer, then that's
not the transistor I mean.

Transistor Q204 is on the smaller circuit board.
Turn the BC250 upside down, with the case off.
Notice the smaller (approx 3" by 5") circuit board,
called the Feature board. It is located towards
the front edge of the scanner and has a flat ribbon
cable soldered to it. There are 2 huge ICs in sockets
on it, as well. The feature board contains the CPU and
digital logic for the BC-250.

Transistor Q204 (Texas Instruments TIP-29)
is located near the upper right hand corner
of the Feature board. The TIP-29 has a metal tab with
a single hole drilled through it and runs too hot.

Hi

My friend has an unblocked scanner and can only hear one side of the conversation (cell). Yes, he is listening to the base, not the mobile frequencies. He says he thinks he is hearing the land line side of the conversation only because he will hear a tech support guy or a business talking at times.

What can I tell him?

:)

thx

Nick, I have a number of BC250 scanners and replaced that transistor with a 3 terminal regulator in all of them. They've been running that way for at least 15 years.

I used 7808 - 8v regulators and used the 16v terminal on the On/Off switch. I drilled a mounting hole in the chassis and ran the wires from there. The collector of Q204 was the 16v line and the emitter is the 8.4v output.

The original transistor is a T.I. TIP 29

The easiest way to do this is to purchase a pack of binding posts, the kind you would find on a power supply..They are usually red and black and rat shack used to sell them...Just drill a hole in the metal chassis, insert one of these and you now have a convenient grounding terminal that doesn't require any tools to connect or disconnect..

Try Ferrite chokes on all the lines coming out of the computer. Keep the chokes as close to the case as possible. Also try all the monitor tricks you can find they are notorious for generating interference. Try another scanner because R/S is prone to cheep construction and no filtering. You can also try an outside antenna and keep the coax well away from the computer, monitor and all the cables. Good Luck

Here is a RS DX-398 in great condition. This radio has several improvements that have been implimented over a "stock radio". These are as follows: 1-an additional broadband rf amplifier has been added internally to boost reception with the telescopic antenna. This really helps boost weak signals. 2-Tuning mute and smooth knob tuning to eliminate the stepped tuning knob action and chugging when bandscanning with tuning knob. This makes for much better feel when tuning than on a stock radio. 3-The audio has been improved to get rid of the tinny sound normally found in a stock radio. It has good volume and punch. This one is easy to listen to for extended time. 4-The stock radio has a very weak green led backlight system for the LCD display. It makes it hard to read in dim light. The dim green leds have been change to brighter blue leds. This makes it much easier to see in dim light. Also note that when using an AC adaptor the light can be selected to stay on all the time. 5-The stock radio has a very slow AGC, this has been corrected to a fast AGC time which makes station reception on worldband much better. These modifications make an already good radio much better. This is the best portable I have owned. The audio is much better than stock. Sensitivity is excellent! I can listen to 80 meter hams easily with the whip antenna! I just don't use it much. I need a scanner. Thanks for reading!

I'm looking to trade for a mint RS Pro-95 or ?

Well, I found that regular I spoke of at a small electronics store 25 miles away and soldered it in and no nothing now. No display, volume, sound, squelch. Now what could it be or was I wrong in the first place. Ready to give up on it. It did spark once on the one that is screwed to the fram eon side with wires coming out on a mini male plug if that is any hint. I'm a newbie and really don't have much experience or equipment but trying. Nick

1694. Any 780 Users: "Channel Activity Indicators" Not Appearing: Why ?

Newsgroup: rec.radio.scanner
Date: 2003-09-27 22:25:41 UTC
From: Robert11 <1234@tiac.net>
Message-ID: <F7odb.18096$pP6.2608@newsread2.news.atl.earthlink.net>
Source record: 25997

Hello:

Have a new 780. New to scanning hobby.

(using the Butel software to load freq's., etc. into radio)

Can't seem to get the "Channel Activity Indicators" to show up on the
radio's display, no matter what mode, etc., I am in.

Funny, as when I played with the radio when I first received it,
about two weeks ago, they did appear.

What might I be misssing, or doing wrong ?

Also, assuming I can ever get them back, might someone explain to me,
please, what information they convey, and how to interpret what's shown
(such as the small black bars, etc.)

Manual not all that clear on this.

Thanks,
Bob

Well, yes the ad is full of BS, but there are two true things -

1. You can't find it in any RS store - the reason being that RS
is only selling it via special order - so far.

2. Technically, because you have to order it (and they charge
shipping - up to $45) - the total comes to over $500. (Even for those
in tax-free states). (and there is a way to avoid the shipping charge
on ordered items - professional RS shoppers know how....)

I see that RS is selling a programming kit for their PRO 92,93 etc radios. The included cable looks just like the CT-29A I use for Yaesu and Icom
Anyone tried this? Cheap solution for a cable if it works on other brands.

Actually there was. The first batch had to go back as the pre-programmed
freqs were missing. The radios that were involved were the very first
batch that had gone out to developers and sales as well as a few
selected vendors. The second batch out had that problem corrected.

At $499.99 plus tax and shipping there was (and is) no place to get the
radio now for less than $500.00. While the List Price is indeed a penny
less than $500.00 the ad is fine.

Laws vary. You might try to do an internet of your state statutes.
Here is Florida it is prohibited with 3 exceptions. Newspaper agencys,
some Alarm Contractors and, fortunately for me, any person with a
valid Amateur Radio License.

I keep a copy of the my ham license and a copy of the statute with the
Ham license exception in my glove box because I don't expect our LE
agents to know everything.

Not necessarily true. The satellite dish antenna includes a low-noise
block convertor. Depending on the local oscilator frequency in the LNB,
there could be interference to some frequencies in the upper range of
the scanner.

He was asking about the technology which effectively put an end to
cellular monitoring, not about the law, which did not do anything
meaningful to stop the practice of cellular monitoring.

Every time someone brings up cellular monitoring, or file trading,
some twit just has to pipe in with, "b-b-b-but that's illegal!
<sniffle>". Why do you ninnies think anyone cares about laws,
against harmless activities, the violation of which is nearly
impossible to detect?

>What can I tell him?

Take your pick:

1. Welcome to 2003, where cell monitoring is mostly a thing of the
past.

2. Keep scanning, you might occasionally find someone using an older
phone, and in that case you will hear both sides.

3. Get a second receiver, subtract 45 MHz from the base frequency,
and listen for the mobile on that frequency. However, for this to
work, he would need a very tall antenna, in a very strategic location.
Remember, we're talking about low power devices. You may be able to
hear the cell site miles away, but you will be lucky if the cell phone
can be heard the same distance as an FRS radio can.

4. Try cordless instead.

Depends on where you are at. In some areas installing digital systems
that is correct. Yes, most ads overstate the importance of items but
this ad happens to be pretty much on the mark.

I don't know the guy who has the radio but if I hadn't already bought
one (for $560 with tax and shipping) I would be bidding on it...

HA! LMAO!! Now that is *FRIGIN FUNNY*!! - and what's even funnier is that
there are already *19 bids* and it's up to $123.50.......

I think I'll start collecting "Smog from Los Angeles" next
summer.....hehe....

Thanks Ken, I needed a good laugh!

1712. Winradio - Custom Demodulator?

Newsgroup: rec.radio.scanner
Date: 2003-09-28 16:06:26 UTC

Hi!

I'm interested in getting a Winradio PC-Based receiver. I've read that they do all the demodulation in software. So, did anyone ever try to write their own demodulator for a mode which Winradio does not support natively? Is it possible?

I know that their api is quite well documented, but do they give you access to all the methods you need to accomplish that? Say, if you would like to write your own fax decoder to receive weather satellite images (like the one from their advanced digital suite: http://www.winradio.com/home/ads-fax.htm), would it be possible?

Cheers!

Having a 7100 in my collection, I'd be interested in the specific FETs that are under rated. If your performance data is emailable, I'd appreciate that, as well. I'd like to be able to fix mine if it goes belly up! So far, it seems to be working OK.

Thanks, Ken

The BC250D works with Fairfax County and the surrounding counties, but you do need the digital card. You can get the frequencies for FCPD at www.trunkedradio.net

The LO in the convertor would likely bein the GHz range so it's still
unlikely to cause interference.

Does anyone know what Frequencies Time Warner Cable's Digital channels are on?

Years ago before you could get a Cable ready TV you had to use a converter, just like you have to do now to get the Digital channels, but if I get a new TV I want it to be Digital ready.

I would appreciate any info anyone may have.

Thanks.
Bill..

11.250 GHZ for your standard North American DSS LNB.
Could be 5.150 and/or 10.750 if he was talking about a big old
mesh dish.

Doesn't seem like much chance of interference though.

^ ... Morse Code (obsolete) ...

Morse code isn't obsolete -- it can still extend to greater distances than voice.

Another advantage of Morse code is that several conversations can simultaneously exist on a single frequency. Each station uses a tone different enough to be distinguished by ear and an experienced operator can mentally filter out all but the tone he's copying.

This is not true.

If the "tone" is different at all, then the carrier is on a different
frequency.

Two (or more) CW transmissions on the same frequency will have the identical
"tone".

You can fit CW transmissions very close together, but not on the same
"single frequency".

1737. AirShow Scanner/Radio

Newsgroup: rec.radio.scanner

I find myshelf taking 2 or three scanners/radios to an airshow. One to listen to Civil Air, another one to listen to Mil Air, freq. counter, and Amateur HT. I'm trying to cut down on the carring load.

1. What would you suggest on a scanner to take to AirShows?

2. Is there any Amateur HT that will receive Civil Air & Mil Air?

3. Is there any scanner that will receive Civil Air, Mil Air, and a freq. counter?

Thank You.

If it's code, it's not on a single frequency in the first place. Not only theorically! Listen to code through a 10Hz filter and it's nearly uncopyiable.

The audio effect is that the filter rings as loudly as the signal. But it's actually a mathematical effect. You're cutting out too much of the bandwidth that the code actually occupies.

There are several scanners, new and used, that cover both bands. The Pro 43 comes to mind {I'm an old timer]. If you're in a hurry [like for the "San Diego Miramar" show next month,] take a trip to your local ham radio store or do an Internet vendor search. There's got to be a lot of good buys available. Try EBAY also.

I'm sure that others will soon direct you better than I can...

OK, I was under the impression that a tone was transmitter on the carrier and that the tone could be adjusted. But that would be modulation.

Ron Hardin <3F78D1EA.51C2@mindspring.com>...
^ If it's code, it's not on a single frequency in the first place.

A single freq is not possible. You're only picking on words. "A single frequency" always implies the frequency that the signal is centered on.

Another advantage is that CW has a narrower bandwidth than any voice modulated signal.

Jack <lprhnvgk2u8d1s5pedaajbi919tc28e6ma@4ax.com>...

^ CW is an unmodulated transmission ...

^ Radioteletype (RTTY and AFSK) also use unmodulated carriers. On HF
^ bands, most use unmodulated Lower Sideband. As with CW, the receiver
^ reinserts the carrier, causing the AF-shifted beat note.

And CW requires only the transceiver and key while the other data types
require another, often more expensive, piece of hardware.

So am I still correct that the advantages of CW are:

- Narrower bandwidth. The bandwidth is effectively even narrower because
overlapping adjacent signals can still be distinguished by the human ear.

- Greater effective range.

- Less equipment than other data types, which also have greater bandwidth.

- Can be used without a microphone and without a key. Just open the box and
short a couple of contacts.

Frank

With BPL coming Morse Code might be the only way left to communicate on HF.

Sorry I'm not a ham and I don't want to see CW go. It call BASICS!
Once you start forgetting about the basics then you start developing a
backwards nation.

Just look at school, they don't teach the basics any more they just
throw the kids on computers. Do you know a single McDonalds employee
who can make change in their head???

CW isn't hard to learn, not even a ham and I can receive 15 WPM and
actually enjoy it....

There is CW -- interrupted continuous wave -- the most common for Hams -
requires a BFO circuit in the receiver to give an audio tone.

and
MCW -- modulated CW -- at the transmitter -- an audio tone modulates a
carrier.

And when two or more CW signals are very close to each other -- the human
ear is very discriminating to pitch.
So indeed with a reasonable bandwidth, one can hear and distinguish two or
more CW signals.
Copying more than one at the same time is a different matter -- some ops can
do it.
But most can "Brain-Filter" so as to concentrate on the desired one.
Kinda like filtering out that loud-mouthed Mother-In -Law and 6 screaming
kids and hear the wife only (:-)
And of course one can insert filters to pull out the desired CW signal and
attenuate the others (within limits)

From the ARRL License Manual 1976:
CW Bandwidth = wpm X 4 (e.g., 40 WPM = 160 Hz)
"With proper shaping, the necessary keying bandwidth is equal to 4
times the speed in words per minute for International Morse Code;
e.g. at 25 words per minute, the bandwidth is approximately 100 cycles."

Normally the bandwidth of an SSB transmission is about 3.5 kHz. It of course
can be much wider if the transmitter passes frequencies above that. Listen
around 3.945 MHz and you will hear a group that has enhanced audio and they
get broadcast quality SSB along with the expected increase in bandwidth
.

^ With BPL coming Morse Code might be the only way left to
^ communicate on HF.

So you think CW will come through the interference fairly well? I guess everything will if the range is close enough, like within a few blocks perhaps. You're probably already aware of it but ARRL conducted some field experiments in areas where the power companies are testing BPL. I didn't read the report but I recall hearing that the interference was about S9 in those areas.

1762. Outdoor Antenna and lack of intermod

Newsgroup: rec.radio.scanner
Date: 2003-10-01 01:41:46 UTC
From: Soliloquy <invalid@invalid.com>
Message-ID: <Xns9406DCB4363DBHamletsSoliloquy@216.168.3.44>
Source record: 25815

Once upon a time, there was a semi-crazy man that posts mainly to the shortwave NG. This crazy man had bought a Uniden 785D multiband scanner but soon discovered that the scanner was virtually destroyed by intermod, even with the simple telescoping antenna that came with the radio. Unfortunately this man lived very close to a cell tower and not so far from some television transmitter antennas. Woe was this man, being reduced to using a 1 ½ inch portable antenna for the Uniden, lest the intermod monster drive the man even more insane. The man lived with tolerance of his 785D, realizing that it could be much much more, but having to content himself with the abundance of local police, fire, and paramedics. One day, as the man was cleaning his basement, he discovered his outdoor scanner antenna from days of yore. He thought, "for old times sake, I'll hook this antenna to my 785D to see how bad the intermod is!" To his great surprise, when connected in a causal manner, (the antenna standing on one of the elements, with another element leaning against the wall), there was no intermod, even though the temporary configuration was on the end of the property nearest the cell tower. The man was intrigued. He next pondered "I wonder if I can use this antenna permanently, so he moved the antenna to the desired permanent location, but withheld the final wiring until sure. Lo and behold, the antenna worked there as well, though a little tweaking of the location was necessary to insure optimum performance. The permanent location was to the rear of the house, and the first trial location was to the front. The offending antennas would be on an axis of about 45 degrees if the front of the house was assumed to be zero degrees and the rear of the house 180 degrees.

Bottom line, when I got the radio, I had hoped to use my outdoor antenna, but had the intermod problems as described above. I did not believe it possible to use the outdoor antenna, since any form of indoor antenna would produce grotesque intermod distortion from the cell tower and television stations. ALL of my portables are plagued by intermod in this location, though the Yaesu VR-500 and the Alinco DJ-X10T can handle the intermod if their attenuation features are used. My Yaesu VX-5R is hopelessly plagued by intermod in this location.

Any insight into why the scanner antenna would permit normal operation of the 785D without the problems of intermod being a real nuisance? My outdoor antenna is identical to the Antenna Craft ST-2 seen (minimally) here http://www.durhamradio.com/scanacc.htm and http://www.starkelectronic.com/scanner.htm and http://www.valcoelectronics.com/scanner/scanner.htm though I purchased it at Radio Shack several years ago.

I thought that if the telescoping antenna caused massive intermod that there wasn't a chance to use an outdoor antenna, where I figured that the signal levels would be higher. With the Uniden, the reception in the upper 800 MHz range seemed dismal with this antenna, but I connected the Alinco DJ-X10T and viola, great signal levels. Apparently my 785D isn't very sensitive at those frequencies. Oh, and by the by, when I connected the Alinco DJ-X10T to the antenna, I got surprisingly good shortwave reception, at least on the several frequencies that I tried. The antenna is fed by coax, so I don't believe the feedline helped with reception. Any insights into why the scanner antenna would offer augmented reception down to as low as the 7.415 that I tried it at? It is rated to 30MHz, I guess that might be part of it.

Using the antenna, I am now able to use the Uniden Service searches, such as aircraft, railroad, CB, FRS, and marine with a high degree of success.

Regards.

john <"(remove this)johnd"@wzrd.com> wrote in news:3F78C61B.75B1@wzrd.com:

Increasing amounts of equipment use methods to transfer the display and other signals from one internal board to another without firm connections, such as the previous use of direct soldering or ribbon cables that actually plug into a slot and firmly seat the ribbon against the connectors. I have a Fluke meter at work that has a rubber pad that apparently has graphite impregnated into it, and one end of the rubber pad presses against one board, the other end against another board. Once in awhile, the unit stops working correctly, and I need to take it apart, clean the rubber pads on the ends, and the mating areas on the circuit boards. Put it back together, and it works. I have also seen display faults in the DX-394 by Radio Shack caused by the same thing.

Anyway, it may be something as simple as a bad connection in the display area.

Regards

What is the USA waiting for?? Will we be the only country in the world
with a morse code requirement??

Ireland and Singapore have become the latest countries to
remove the requirement for Amateur Radio applicants to pass a Morse code
examination for HF access.

In addition, Switzerland, Belgium, the UK, Germany, Norway, the
Netherlands, Austria, New Zealand and Australia have moved to drop their
Morse requirements.

Yet the USA will surely be the last to join the rest of the world in doing what
is obvious to everyone else.

So what? If all these countires jumped off bridges would that mean we would be nuts for not jump too? What these counties do are their own business and who wants to be put in the same class as Germany anyway!

> Yet the USA will surely be the last to join the rest of the world in doing what
> is obvious to everyone else.

Oh I hope not, I hope the USA never joins the rest of the world. We don't need a 80, 40, 20, and 15 meter CB bands. God forbid that we have something happen here far worse than 9/11 which renders Voice communications useless and we need to go back to basices. After all its a lot easier to build a CW rig than a voice rig in the event of a national emergency. Once you stop teaching/learning the basics then you'll gradully become a less educated national. Just look at workers in McDonalds, when the computer quits working they can't make sales.....

Hello:

Can someone please tell me under what circumstances
to set "Step-Size" for 7.5 KHz ?

e.g., do you use 7.5 every time the last 4 digits ends in 75, such as
xxx.2175 ?

How about if the last 4 digits ends in 25, such as xxx.2125 ?

Or,... ?

Thanks,
Bob

An SSB signal is about 3000 cycles/sec (i.e. Hertz) or 30 times as wide. AM
and FM are even wider.

Pretty close. Some of the other digital modes are narrower but as you
state, you need more hardware such as a computer. In addition each of the
other digital modes has its own unique set of advantages and disadvantages
in on air operation.

Clint <vnn38gm40uib35@corp.supernews.com>...

^ (1) what will you say after 6 months or a year, and the
^ nations you listed have seen no such degredation in band
^ quality after dropping the code requirement?

What is their population compared to the U.S.? Do those other countries have the trouble on the 11 meter band that the U.S. has?

If the code requirement is unnecessary then what about the electronics knowledge requirement? Is it necessary to know how a transistor functions in order to operate a two-meter radio? Should we also drop that from testing? Should the exam be nothing more than a test of the FCC rules? Can you come up with reasons to drop that also? Someone will, eventually, if we continue to drop knowledge and ability requirements.

Clint <vnn3dv59e83cbd@corp.supernews.com>...
^ It's just that it no longer needs to be forced down
^ people's throats *involuntarily*

But it isn't forced and it isn't involuntary. An Amateur license is something that is voluntarily sought.

^ The road belongs to motor vehicles.

Not true. In the U.S. it is a privilege to drive a motor vehicle but walking is a right. Before motor vehicles everyone either walked or used horses in some manner. If you do not wish to use motorized transportation then you still have the right to move about the country by other means. In most cases the only way to get from one place to another is via a public highway. Pedestrians and bicycles have a right to use public highways, for motor vehicles that use is only a privilege.

^ What does it mean when they say a "roller"?

They are checking for wants and warrants on a moving (rolling) vehicle
instead of on a vehicle stop. Generally the vehicle behavior is suspicious or
its description is similar to a wanted vehicle so they're calling in the
license to see if it's wanted.

^ Whats "Tiberon" (spelling?) ?

How is it used?

A "roller" is a term used for a scout car. You might have heard some plainclothes surveillance units refer to that.

Frank, you are correct about "rolling" meaning a vehicle being followed by the scout car. It has a different meaning than "roller". Cars will sometimes call up for a "rolling registration", meaning they want it run through LEIN fast because its moving.

Hello everybody,

Yesterday I bought a Gp900 UHF 2 channel handheld portable from Motorola.

See also http://www.bsab.se/Produkter/GP900.htm

It works fine, but I want to expand the number of channels to 16. This is possible, I have allready made the hardware modification and the channel knob can be turned to 16 channels.

It is the same modification as for the Gp300/P200 radio's.

Now I only need a codeplug for the 16 channel version of the Gp900 UHF or Visar UHF (it is the same codeplug), should be modelnumber H01RDC9AN3AN.

The current modelnumber is H01RDC9AN1AN.

Please help me by mailing me your codeplugs.

Many thanks in advance.

Well PSK31 is narrower than morse code but the problem with it (according to our local PSK31 guru) is that because it is narrower, it is hard to find the PSK31 signals unless you know exactly where to look. I.e. just dialing around, you easily zoom right past them without ever knowing they are there. For that reason, I believe they have established calling frequencies in each band so they can find each other. Plus they use some type of software to scan and show peaks. I'm not into myself but we have several in the local club who are.

> there any differences in performance?

Major difference. The 785 suffers from FM overload and Intermod
problems. So much so that it lowers the sensitivity to nearly the
point of uselessness in the 225-400 MHz range.

The 250 does not have any of these problems and appears to be a very
well built (from an electrical/RF standpoint) radio.

I have many many radios in the shack (19 scanners plus HF rigs) and the
785 is the biggest dissapointment I've seen. The 785 however will
receive digital systems well, but when it comes to Milair or Civil air
bands forget it....

No, you need a native codeplug, and you have to re-align the whole
radio after loading it!!!
Or you change the model number with an hex editot and re-build the
file to fit the checksum.

Sensitivity and selectivity are the easy part. I know of no handheld
scanner with the intermod immunity of the PRO-2006.

Very strange. Obviously your scanner can't handle the strong local signals picked up by your small "rubber duck" antenna. So obviously the outdoor antenna is delivering LESS signal to the scanner. You may be hearing more signals, because the scanner is no longer being de-sensitized by strong signals.

I suspect you're getting a lot of loss in the feedline.

What type of coax are you using? What length of coax? And how old is the coax?
If it's a long run of old weather beaten RG-58, that would explain it.

As the saying goes, "Scanners don't need pre-amps, they need attenuators."

n2ah@hotmail.com wrote in
news:774a2c02.0310021200.27a7a850@posting.google.com:

I'm glad that someone wrote in response. The purpose of the post was to pique the interests of those that also have been plagued by intermod.

As to signal strengths and feedline loss, the signals are actually greater now then when using the "rubber duck" antenna. I was unable to use the "Service Searches" that are part of the Uniden 785D system. There simply was no signals available with the indoor antenna, save for the blasted and incessant intermod. Nothing has changed in the local cell tower, since my Yaesu VX-5R is virtually destroyed in this location, as are the other handhelds that I have if I use them un-attenuated. I have still to try the experiment of using the VX-5R coupled to the outdoor antenna to see if it is still plagued by intermod.

Brand new, RG6, Radio Shack supplied and about 85 feet. The antenna has a 300 to 75 ohm matching transformer. At first I was concerned that the RG6 should have been RG58, since the antenna is older (I came across the Radio Shack info for another scanner antenna that they offered, and it recommended RG-58). I notice that the newer scanner antennas (such as my model) recommend RG6. Eventually I came across this link http://www.barovelli.com/radio/scan/scanant.htm as well as other links, and came to the conclusion that for scanner work, the difference between 50 ohms and 75 ohms could be ignored.

Anyway, if it wasn't for the greatly augmented "Service Search" capabilities with the outdoor antenna, everything ranging from CB, Aircraft, Marine, Railroad, through FRS, I would also have thought that attenuation would have explained it. Someone suggested a bit of directionality might account for the increased resistance to intermod, but with the antenna involved, it would be hard to believe that was the case.

Regards.

news:20031002135632.15380.00000133@mb-m28.aol.com:

Try listening to them when you are on the ground.

Seriously folks, how far are you from the Airport? UHF and VHF tend to be line of sight only, if you are too far away, you won't hear the airports. The planes are line of sight to your locale, so you can hear them with less difficulty.

Outdoor antennas will improve your reception. You can get multiband or single band antennas. If airports are what you seek to hear, a directional antenna at the desired frequency will add considerably to the signal level, but only in one direction. You'd have to have another scanner with an omni-directional antenna to hear the planes.

HF (shortwave) radios offer the ability to listen to certain aircraft operations, but not very likely in your area. Mostly planes into New York and other coastal cities.

Have fun.

That's pretty normal unless you live near an airport or one of the air trafic control remote transmitter sites. You are hearing the aircraft from a long ways away precisely because they are in the air and reception on these frequencies is generally line of sight.

I've often wondered about that term ever since hearing it in The Blues Brothers movie. The reference below is to the police car?

Elwood Blues has just passed on a red light, and a police car rolls up behind them. The words are said in the same rhythm as a blues song ("Soothe Me") on the car stereo]
Elwood Blues: Shit!
Jake Blues: What?
Elwood Blues: Rollers...
Jake Blues: No!
Elwood Blues: Yeah.
Jake Blues: Shit!

File -> New -> Auto Mode File -> Get from Rx

Save it as something else and work with a copy of it if you want to
change it. Its a text file and you may find it easier to edit/change
anything with a text editor rather than the Workshop just make sure you
follow the same format on each line. You can use "Edit -> Check and ->
Renumber on a new file to check data before uploading.

There aren't any add-ons- yet. There's been much discussion on the
various boards about how APCO phase 2 systems (which use a different
form of modulation) renders the 96 (and any of the other digital
trunktrackers) unable to track. I have a feeling this is to what you're
referring.
There are *rumors* that the new BC296 et. al from Uniden will cover
phase 2 systems; and at least 1 *rumor* that the 96 *could* have a patch
to cover trunking phase 2 systems. But nothing substantial as yet.

^ Well PSK31 is narrower than morse code but the problem with
^ it ... is that because it is narrower, it is hard to find the
^ PSK31 signals unless you know exactly where to look.

I didn't know that the bandwidth was narrower but I have discovered that the signals are hard to find. So is RTTY for me; but then I'm new at this.

This thread is in too many groups and I only read one of them so I'm backing out of the discussion.

Thanks to you and the others who have provided informative replies.

Frank

^ Frank, you are correct about "rolling" meaning a vehicle
^ being followed by the scout car. It has a different meaning
^ than "roller".

This jargon must have a different meaning in our two areas. A "roller" in California has always been a request for a 10-28/1-29 on a moving vehicle -- one that has not yet been stopped. It's used by patrol officers. The term is used as follows:

UNIT: Paul 6 with a roller. (Or ... clear for a roller?)
DISPATCH: Go ahead.
UNIT: California 9ABC876.
DISPATCH: No wants, registration is current to a ...

In years past the term was used as "Paul 6, rolling 28/29 on California 9ABC876" but the term is now so common in the state that it's been condensed to just "roller" in many areas.

I concur with Frank on this one, "28/29 on a roller". Also, I I'm pretty
sure I've heard CHP units on accident scenes use it as in "Can I get a
roller and a regular rig" - the roller being a flatbed roll back tow vs. a
regular tow.......

MIRA LOMA, Calif. (AP) -- Promising rookie sports car racer Paul Mumford was one of two men killed when the small plane he was piloting crashed and burned this week, a close friend said Thursday.

Mumford, 31, of Yorba Linda, was with Chris Premer, 31, of Costa Mesa, said fellow racer Brian Provost. Provost said the two men were good friends.

Riverside County officials declined to release the names of those aboard the Piper Cherokee that crashed Wednesday, three miles from Chino Airport as the pilot tried to make an emergency landing.

PSK31 is simple. Almost all the programs have spectrum graphs, or
waterfall displays to show signals within the passband used. Yes, most
PSK is on an established freq, +- . You don't "dial around" for PSK31.
You tune the radio to the set frequency, and the software is used to
"tune". Say 20m, you would tune in 14.070.15 and all the rest is done
in the software. You see a spectrum graph that shows all the signals
in the passband. To receive one, you just click on it. Bingo, it locks
up and starts to receive. The program I use "hamscope" can receive two
at a time in separate windows. Also works rtty, bpsk, etc..Most all
the common PSK freq's are at .070.15 per each ham band. IE:
3.570.15
7.070.15
14.070.15
21.070.15
28.070.15
Maybe be others such as novice PSK, etc .. MK

They were made in Refugio, Texas in the late 1960's thru the '70's.
There was a High VHF, Lo VHF and an Aircraft unit. They were tunable and
available with a separate squelch unit that attached to the receiver by
a motorola plug. The squelch units screwed to the bottom of the
receiver. It made for a nice compact radio that worked off your car
radio. Just set it to the end of the AM band and tune the dial!

They were one of the cheaper units available at the time and were very
reliable. I had all three but gave them away when I moved to an 895 XLT.

Wish I had them back; the'd be worth a mint on EBAY...!

Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbists who are frequency hunters. You will find lists of Ontario radio frequencies that are not listed on any web page, published in any scannner book (Haruteq or Scantrix) or listed in the government frequency list (Industry Canada's TAFL). This list is all based on research and the patience of the people who contribute to this web page.

Soliloquy <Xns9409A84488EC2HamletsSoliloquy@216.168.3.44>...

^ How about radiation patterns.

^ Is there an analogy to radiation patterns for reception (onmi-
^ directional antennas, still, as someone has suggested, perhaps
^ a degree of directionality) and could this be a factor?

I know that a Yagi is similarly directional for both transmit and receive so it may be true for most antenna configurations.

You can make a very simple directional antenna by placing an element that is slightly longer than your antenna's radiating element about one-eighth wavelength from the antenna:

```
|
| |
|
```

The diagram isn't to scale -- the longer element should only be a few percent longer. The shorter element is the antenna. In the diagram above, the main lobe (the best reception) would be to the right. The longer element is a reflector and tends to block signals from the left while enhancing signals from the right.

If the additional element were a few percent shorter then it would enhance the signal from the same side. This additional and shorter element is a director.

If you place your antenna near other metal objects then a similar effect might occur.

If you use both a reflector and a director

```
|
| |
| | |
| |
|
```

each one-eighth wavelength from the antenna in the center, then you have a Yagi. The antenna in the center should be a have-wave dipole. You could add additional reflectors to the right, each a little shorter than the previous, at one-fourth wavelength intervals:

```
|
| |
| | | | | |
```

| |
|

The spacing between elements is as stated but the antenna can be enhanced by using precise measurements for the elements (reflector, antenna, and directors) that consider the wavelength and the velocity factor of the conducting material. But anything close will have some effect.

^ Does anybody know how to scan the FRS channels and
^ subcodes at all? I have a PRO -92.

Just enter in the frequencies and you will receive everything -- code or no code. The CTCSS (code) is only used to keep all except signals with that particular code from coming through. But if that is what you want -- to block all but one with a certain code -- then I don't think any Radio Shack scanners until the PRO-96 will do that.

They certainly belong on the sidewalk since they can't even come close
to the legal speed limit. Why do you think everyone hates them?
It's not because they look stupid, it's because they seem to enjoy
causing unsafe conditions on the roads!

The 43 is good, but VHF high above the regular PSBs, there's a ton of
intermod. My 43 was useless when trying to listen to RR stuff.

A few of the ham dual banders are really good performers, RF wise, but
are really slow scanning, and some are a total pain in the ass to use.

Source record: 25766

Mark;

Here is a source of the FRS frequencies:
<http://www.strongsignals.net/access/content/faf.html>

Scroll down to the section listing them. And try the GMR and color 'DOT'
frequencies also.

After programming the above frequencies into a band of there own on the PRO-92,
scan them in the "OPEN" mode
and any CTCSS tone codes will be displayed. You may not see many CTCSS or
Digital Tone Codes on the
Family Radio Service-FRS band. But on other bands they show up all the time.
Check the manual to find out
how to us the CTCSS/DCS feature, here's a link to the manual.

<http://support.tandy.com/support_electronics/56346.htm>

I use the tone code squelch search feature on the ICOM IC R-2 (CTCSS only)
and CTCSS/DCS on the Uniden BC 250D
and use the CTCS/DTC enty only capability -feature with the RELM HS-200 hand
held radio.

"Soliloquy" wrote:

> As to signal strengths and feedline loss, the signals are actually
> greater now then when using the "rubber duck" antenna.

How are you determining what the signal strengths are? (I'm talking about actual rf signal levels at the input to the scanner, NOT what you're seeing on an "S" meter or hearing from the speaker.)

If your outdoor antenna were delivering more signal strenghth to your scanner, your intermod would get worse, not better.

As I tried to explain, when the scanner is subjected to STRONG local (unwanted) signals, the scanner will be de-sensitized. This will make it difficult to hear weaker signals. If attenuation is placed between the antenna and scanner, this "de-sensitization" effect will be reduced, and weak signals will actually appear stronger. In other words, less signal strength may actually improve reception in your case.

Often folks try using pre-amps to improve reception, only to find that the preamp degrades reception (especially with handhelds). This is similar to what I described above. Sometimes, less is more!

> my Yaesu VX-5R is virtually destroyed in this location, as
> are the other handhelds that I have if I use them un-attenuated.

There you go. Adding attenuation improved your reception. I'm speculating that the attenuation (loss) in your feedline is having the same effect.

> Brand new, RG6, Radio Shack supplied and about 85 feet. The antenna has a
> 300 to 75 ohm matching transformer. At first I was concerned that the RG6
> should have been RG58

RG-6 is much better than RG-58. However, 85 feet is a pretty long run. All coax cables have higher loss as you go higher in frequency. If your overload/intermod problems are indeed caused by nearby cell sites, those 800 MHz signals will be attenuated more than signals at lower frequencies. And your outdoor antenna is probably less effective at 800 Mhz than at lower frequencies. So your antenna and feedline are acting like a "low-pass" filter in that they attenuate the higher frequencies. All of that is consistent with what you are hearing.

In many areas around here, Bicycle riding on the sidewalks is "NOT"
permitted. When I was a young man, the rules for riding bicycles were taught
to use ON THE ROAD! Riding "with" traffic for one thing, on the side of the
road, having a mirror for viewing what is behind you, and so on. Even taught
turn signals by hand.. Those rules aren't taught anymore, like so many
things that aren't taught and should be. THAT is a large part of the
problem, NO ONE CARES! In some cities, at least the ones I know of and have
been to, the pedestrians wouldn't have a chance with the cycles on the
sidewalks. Especially the elderly and handicapped. The rules of the road
apply to all who use them, EVERY ONE must pay attention and exercise care.
Sadly, this isn't the case. It is every man for himself anymore. ROAD
RAGE!!!!!

Hitting people "intentionally" on a bicycle IS attempted murder at the
least. You have to be a kook to even applaud such and action. Maybe that is
one of your kids or relatives one day. It always comes back home, you
know.....

For that D.J. to suggest such a thing, he was an ass to say the least.. Our
CC stations here do some wild stuff, but NOTHING to condone injuring others.
Matter of fact, they look down on those things. So it isn't CC doing it,
it's the idiots they have at that particular station.

Lou

NO problem! And I DO stand by what I've said. I drive a vehicle and ride a bike, I'm getting the best of both worlds. With Gas prices, I'm surprised you don't see much more bicycling. Lou

To Edna or whoever you are....

I "AM" a law maker here locally, and I'll tell you. SIDEWALKS are for PEDESTRIANS. WE DO NOT ALLOW bicycles on our sidewalks.. SO WE ARE NOT ON OUR DEAD ASSES. WE ARE DOING OUR JOBS. Bicycles being on the road, is nothing new. It's been that way for YEARS. YOU need to get a life and learn how to deal with society. YOU are not the sole inhabitant here. IF you can't deal with that then you may want to consider seeking some therapy or Prozac or both. I'm sure glad you don't live here. I can just about imagine what fun we would have. And I don't mean in the humorous way. Lou

(snip)

Curious .. maybe the short hand held antennas are more resonant to the
cell towers signals than the outside antenna. Thus using the outside
antenna will decrease the ratio of 'bad' signal to 'good' signal enough to
let the radio work as it is supposed to....but that's just a guess.

Not to flip you off Bob, but ask the folks at RS.

The wire(s) that go to the speaker will be rerouted to
the new jack. New wire(s) will go from the jack to the
speaker. There is a switch built into the jack that
will disconnect the speaker when a plug is inserted
into the jack.

If I had the jack in my hand for us both to look at the
above would be clear as a bell.

Tom,

OK.... The only thing I can think of that serves meals on the train are in AMTRAK crew, METRA does not serve meals on there trains... The best thing other than waiting for a reply that might not be a "right" answer is do what most of us do.. Check out the radio that they are using and try to figure out what band they are in "VHF","UHF","800" then do a search with your scanner... OR like what I do is get my Scout or any frequency counter and wait until one of them key up on the radio...

Let us know what you find out..

Thanks

Fred Shabec

The Winradio API is extremely well documented and I had no problems controlling their receiver from my own software.

It is certainly possible to write your own demodulator, but be prepared you will need to know quite a bit about DSP theory. Don't expect to be able to write a demodulator if all you have done before is a simple 50-line program in Visual Basic.

All in all, the Winradio receivers are the best solution for an experimenter who wants to do his own software stuff - there are no other receivers as well documented and supported in this regard as the Winradio ones.

FRS: Family Radio Service, no license required, 1/2 watt max., no antenna modifications.

GMRS: General Mobile Radio Service, license required, used to be used by some small businesses, but was turned back over to "Citizens Radio Service".

ITIN: Itinerant, low power, usually mobile situations, used at random, (not fixed), locations. Typically used for business.

The colors, and stars, were used to designate various frequencies, without actually showing what they were.

Five of these Itenerant freqs in the VHF band have been turned over to MURS
now
(Multi-Use Radio Service) Kind of like FRS but with more power allowed

Check the wiring for the plug and external speaker for continuity, but
not shorted.

It that checks outm then most likely you mis-wired the jack. It could be
you
reversed the _input_ and the _output_ connections of the built in
switch.

My childhood was wonderful, I rode my bike on the sidewalk!
As for now, I drive approximately 150 miles a day and poses a safe driver
endorsement on my license, no tickets in over ten years!
None of that changes the fact a pack of morons on bikes going 10MPH on a
road designated for 50 MPH causes a safety issue for everyone involved!
Don't the rules of the road specify a MINIMUM speed?
Don't you feel 50 riders clogging an entire lane is a problem?

I personally love when some impatient ahole passes around them into
oncoming traffic..

So you want to beat me up for my opinion that you aholes
belong on the sidewalk, and not doing 5 - 10 MPH on a road designated
for 50 MPH?
I'll bet you do that in your car as well!
If anyone needs help, it is you guys who thinking creating an unsafe traffic
situation FOR YOUR SOLE benefit is OK!
I guess bikers are just a bunch of folks who feel the world owes them something.
Their are lots of designated bike routes for you guys that cars are exempt from. Use them.

We have way too many laws on the books in the US already.

If the cyclists would just realize that they are causing a problem, and start using courtesy and reasonable discretion in choosing where to ride, then no new restrictions would be needed, and public animosity toward them would go away.

Cyclists on roads with a designated bike lane present no hazard or obstruction, and those who want a downhill thrill can find steep places (like a ski run during the summer) where there will not be any hikers and uphill riders to mow down.

A much bigger problem, though, is slow moving vehicles, leaving a recreation area. Their mirrors should tell them that traffic is backing up, but they don't pull at the next turnout and let people pass.

No, that is something that the US would do, and the other countries would not follow. They did not jump off bridges, they eliminated a ridiculous requirement. We should have shown how much better we are than they are by have been the FIRST country to drop it.

> What these counties do are their own
> business and who wants to be put in the same class as Germany anyway!

They were smart enough to know there were no weapons of mass destruction in Iraq and not get involved in wasting billions of dollars a month on war. Instead they use that money to provide health care for their citizens. I sure wish we WERE in the same class as them in many ways, one of them being smart enough to eliminate a retarded requirement. The US military dropped it, why are civilians being made to keep it?

> > Yet the USA will surely be the last to join the rest of the world in doing what

That so much makes no sense on so many different areas. First of all, these bands ARE for the citizens, thus they ARE citizen band now. Second of all, the only thing that makes 6 meters and above any different from the 11 meter CB band is NOT morse code, because there is no morse code requirement now. (idiot THINK!) It is the call sign requirement which keeps people from being anonymous which makes the difference, not morse code.

> God forbid that we have
> something happen here far worse than 9/11 which renders Voice
> communications useless and we need to go back to basices.

Basics as long as voice is used, since most of the population does not know morse code. The president or emergency broadcast system (now EAS) will NOT be using morse code to talk to the public ever, no matter what the emergency.

Cops, Ambulance, Fire, none of them learn or use morse code, and they work more with emergencies than anyone else. No one at homeland security is learning morse code.

> After all its
> a lot easier to build a CW rig than a voice rig in the event of a
> national emergency.

A crystal receiving set is even easier yet, so you can listen to emergency broadcasts. Build a CW rig and who the hell are you going to talk to? Who is going to UNDERSTAND your message? Certainly not the American public, your neighbors, police, fire, red cross, etc., etc.

> Once you stop teaching/learning the basics then
> you'll gradully become a less educated national. Just look at workers
> in McDonalds, when the computer quits working they can't make sales.....

And neither will they ever understand your morse code messages that you will be sending. Those bastards don't even understand ENGLISH so they will just all have to die. Not a big loss there.

Do some research on the past hurricane, tornado, 9/11 emergencies we have had where hams have assisted in providing communications. Morse Code is never used, it is always voice.

Police cars, Ambulances, Fire trucks, do not have morse code keys in them, they have microphones and speakers. Try using your morse code radio to call them for help and they will never understand or come to help you. I will call in plain English and receive assistance.

Live and learn.

Or don't forget the time you will be stranded at the north pole with nothing in sight for miles but a phone booth
with a telephone where the microphone is missing and you have to use the touch tone pad to send a message in morse
code with! I love that one. Always some sort of ridiculous situation that would never happen to try and come
up with an instance where morse code could somehow be used. But then don't forget when you use that phone, the
operator, police, or whoever you call will not understand morse code, and that is the most important point everyone
on that demented side keeps forgetting.

The Emergency Broadcast System never sent messages or tests in morse code, but English voice. The public would
never understand it otherwise.

Commercials and spam are always in plain English so the message can reach as many people as possible, not be
limited to the two people who know morse code. Note how only idiots post binaries on newsgroups in yenc, but
spammers don't, because they want EVERYONE to be able to decode and view the spam, not just two people.

In a national emergency, people are not suddenly going to understand morse code, so that would be worthless unless
you want to try and communicate with some 80 year old ham radio operator that is a hundred miles away. I would
rather reach some emergency agency personnel that are not going to know morse code, but spent time learning
important stuff instead that will now be useful in an emergency.

Mommy, Mommy, make that mean 'ol FCC man give me a license.... Mommy, I cain't learn the code, I have ADD... Mommy,
Mommy please give me more Ritalin....

On and on it goes, there are those who can, and those who can't. Next you'll be bitching about the requirements to get
into medical school... to stringent for ya? Too bad.

>
> What is their population compared to the U.S.?

What does that have to do with anything? Is this the "big bully approach" again? The US will eventually drop the requirement like EVERY country on this planet, the point is why the US always has to be so behind the times and the LAST one to figure out how to do it. We should have been the great example to the world and been the FIRST one to drop it, not the last.

> Do those other countries have
> the trouble on the 11 meter band that the U.S. has?

What trouble? That it is all nothing but Mexicans with illegal amplifiers anymore? What does morse code or having to get a license or use call signs have to do with that?

> If the code requirement is unnecessary then what about the electronics
> knowledge requirement?

If you are going to build and set up high power transmitters, you had better know the requirements needed to operate the equipment. If you are going to use a microphone, then you have better know how to speak too. But needing to know morse code before you are allowed to use a microphone on HF is like adding a Russian speaking requirement before you are allowed to drive a car on a US road.

You still need to know the rules of the road, but you don't need to take a test to show morse code before you drive a car either.

> Is it necessary to know how a transistor functions in
> order to operate a two-meter radio?

No, that is not needed. What is needed is to know about antenna systems, interference issues, band plans, laws, and anything else needed to know before setting up and operating a ham radio transmitter setup. No we don't get tested on how a car engine works before getting a driver's license, so we don't need to be tested on how a transistor works before being allowed to use a radio. That is as ridiculous as having to know morse code before being allowed to use a microphone.

If you want to use morse code on ham radio, then you should be required to learn how to use morse code first. Those not wishing to ever use morse code do not need to learn it, just as we don't all learn Chinese before we can post on newsgroups in English.

> Should the exam be nothing more than a test of the FCC rules?

Think WHY one has to be tested on the things we are tested before being allowed to get behind a car and be on the road with other drivers. Now apply that to getting a license before being allowed to use a radio that could cause harm to others if it is not operated properly.

> But it isn't forced and it isn't involuntary. An Amateur license is something
> that is voluntarily sought.

Same with a driver's license. So let's make a morse code requirement for that too then?

The biggest disadvantage would be narrowing down the percentage of people on the other end that would be able to decipher your emergency message.

If you are calling for help, you want as many people on the receiving end of your transmission to be able to UNDERSTAND your message as possible.

The emergency broadcast system (now the EAS) works on English Voice, NOT with morse code. And it is designed to be used in an emergency. Same with police, fire and ambulance radios.

Imagine the president addressing the public with a morse code key. Might as well talk to a wall.

> Mommy, Mommy, make that mean 'ol FCC man give me a license.... Mommy, I cain't learn the code, I have ADD... Mommy,

I would love to see you cry to your mommy when you can't get your driver's license when you turn 16 because they may add a
requirement that you have to learn Russian first as a requirement to drive a car.

> On and on it goes, there are those who can, and those who can't. Next you'll be bitching about the requirements to get
> into medical school... to stringent for ya? Too bad.

If morse code was a requirement to get into medical school, then yes, so would everyone. (except for insane ham radio
operators without common sense reasoning abilities)

actually the 9000 covers the 700mhz band, the 780 does not
for programming the 780 is hands down the best scanner on the market.
however my 9000xlt has been my workhorse for about 7 yrs and it will be
until analog is gone all together
i had a 895 and would never buy another
the big difference between the 9000,780 and 895 is that the mode is not
selectable on the 895, it is band dependent, meaning 108-136AM, 136-174NFM,
etc.
you can not manually select a mode.

Funny, but most people I hear complaining about the requirement already learned and passed the morse code test and are General and Extra license holders.

I wish that the next time you wanted to fill your car up with gas, you had to waste time learning Chinese first or no gas for your car. If you whined about it, we would all laugh at you, call you lazy for not taking the time to learn Chinese.

Please don't be stupid. Stop, read COMPREHEND what you are reading and THINK about things before you start making statements that make no sense.

Yep, that's me, no common sense. However I was bright enough to be able to learn the code. :-)

I turned 16 a long time ago, and already have my drivers license.

You should certainly follow your own advice! I already did stop, I did read, and I did comprehend. I passed the 13 word per minute code requirement!

In emergencies hams are NOT broadcasting to the public. They are using
their skills to pass messages from the public and emergency services to the
public and emergency services via the ham network. No has to be able to
understand the message while it is in transit except the hams. Thus hams
can and will use any means at their disposal appropriate to the situation,
that includes voice, computer digital modes and good old Morse code.

Strange. That flies in the face of all the available surveys. The General
and higher class operators heavily favor keeping it.

Surveys are never accurate with reality. That is just how unemployed mall rats who actually talk to telemarketer and clip board survey takers feel.

Of the 15 - 20 ham friends I have, we are all Generals and Extras and ALL against the morse code requirement. Half of us also hold the GROL commercial licenses with radar endorsement.

If you know of anyone who is a General or Extra who is for keeping the requirement, that is because they feel that since they had to do it, everyone else should have to too. A very childish and selfish emotional reason that is not based on logic or common sense.

Everyone I know had to take the code test, but we still have sense to know it was wrong and understood it was only because of the stupid world agreement that we had to endure it. Now that that excuse no longer applies, everyone is dropping it. So will the US, but they always have to go through their long drawn out political ways to make a simple decision take months and years to finally get something done, even when it is as simple as this. Look how FAST other governments were able to drop this. Very impressive!

Hey, our ancestors had to own slaves and not allow blacks to use the same rest rooms and water fountains as whites, so everyone else should have to continue by those requirements too, right? When we dropped the slavery thing, that was because people were too lazy to beat slaves and now the world is like citizens band because we don't have slavery in the US anymore, right?

Yeah, we all had to take the stupid code test. And most of us ended up forgetting it right after the test because we never used it. We never intended to use it, but we wanted to use microphones on HF frequencies, so we had to learn it because of a world agreement. The military dropped code because there was no world agreement forcing them to keep an outdated antiquated worthless mode. (the microphone and speaker were since invented, thus we have telephones in our homes and not telegraphs)

Well, the world finally agreed that the code requirement is silly and dropped it. But now each country has to do the paperwork to drop it from their respective country's law books and it is a quick process in efficiently run

countries, but will take months and years in governments like the one in the USA.

In case you are too slow mentally to realize it, the debates here now are no longer about if we should keep or drop the requirement, that debate is now over for good. The new argument is why it is taking the US government so long to change the wording and text in our laws to reflect the change.

Keeping the requirement when no other country in the world has the requirement would be even more idiotic than the whole requirement was in the first place! Surely if you sit and think about that for a while you can see something as obvious as this.

Then again, you don't even know what the argument is about. You still think it is about if or not to have the requirement still. It is about the slowness of the US to change the text of the law.

Obviously it is fact that the requirement will be dropped in the US and every country in the world (it already has been) it is just a matter of watching how fast or slow each country's government can rewrite a law if they put effort into it.

Look how fast the US government could act to change the name of french fries to freedom fries. They can do it for silly things, why not when it comes to serious issues?

Billions every month for war against a country that didn't have any WMD just like they kept saying they didn't, yet not one dollar available for health care and now more US citizens are without health care and insurance than ever before.

Yet, knowing and learning morse code is your priority in life. How pathetic.

The last time I used morse code, was decades ago when I had to pass the test at the FCC field offices a long time ago, never used it once after that. Talk about lazy, YOU probably only had to receive and recognize a few words and select a multiple choice answer. We didn't have it that easy, but we don't start whining that all of you should have to do it the hard way just because we had to, we realize it is a silly and ridiculous requirement and NO one should have to take it unless they intend to USE morse code on the bands.

In the later case, even those using 2-meters should have to learn it if they intend to use it there.
Only makes sense. Something many of you know nothing about.

In an emergency anyone is broadcasting to ANYONE that is listening. If you think a ham or anyone else in an emergency is not going to want a non-ham to help, or will refuse to deal with a non-ham you are crazy.

In an emergency you can even use frequencies and radios at your access that you would not normally be licensed to operate on. We are talking about EMERGENCIES here. No time to waste playing morse code or taking the time to pound out a cry for help one letter at a time in a mode that only ends up sounding like silly beeps to most of the people listening on the other end that would otherwise be hearing your cry for help.

Next time you are stranded in your car and need a tow, why don't you call on your cell phone and punch our your problem in morse code with the touch tone pad and see how fast you are able to get any assistance. Your call for assistance will be taken as a prank phone call and they will hang up on you and you will remain stranded until you decide to talk into the microphone so that someone can hear and understand your message.

Common sense folks. You can pretend to say otherwise here on this newsgroup, but when the real emergency arises, the last thing on your mind will be playing with morse code! Then see how fast you can use a microphone and your voice!

> They are using
> their skills to pass messages from the public and emergency services to the

MOST hams don't understand morse code either! The no-code tech class has outnumbered the other license classes for years, and those that did learn the code only did so to pass the test and many never used it after the test. (like myself and all my ham friends)

Send code to us and it will be nothing more than beep beep beep beep. I remember SOS and the letter R for some reason (probably since most repeaters end with R on their id) but that won't tell me where you are or what the problem is. Unless you talk to us, you can consider yourself dead in an emergency.

> Thus hams
> can and will use any means at their disposal appropriate to the situation,
> that includes voice,

It sure does.

Since Morse code is used in the HF bands and you need to pass the code test to get the license to work the HF bands, it seems to make sense to me.

If you really want to work the HF bands, learn code and be done with it. By your own argument it must make sense.

Well you have a good driving record, that is great. Good for you. Minimum speed for a bicycle? None exists. By "rules of the road", I meant with hand signals, making turns using them, mirrors for safe viewing in rear, traveling in same direction and so on. Even wearing a helmet now, since they have been introduced in previous years. IF you ever see the pamphlets and they have been printed in previous years regarding bicycle safety you would know.

Bicycles have been a long standing part of our society among others. More so than cars or trucks at some periods. I'm "NOT" advocating bicyclists to ride like idiots on the roads. I'm saying they should do it safely and with the "rules of the road".
The problem is, between unsafe cyclists, road rage by vehicle drivers and such, we have a real problem.

To advocate what I've seen in here though, purposely running cyclists over and so on, is UNCALLED FOR. That is nothing short of attempted homicide. That won't correct a problem. It creates more. I've already spoken to one gentleman in here regarding cycling.. I suggested that since he is involved in some cycling organizations, that perhaps they put a push on for a renewed sense of cycle safety. Will it happen? Maybe with some. When you take a test for a drivers license, they try to drill it into you about safe use of a vehicle. That doesn't stop some people from driving like idiots afterwards. Same with bicycles. You can teach safe riding courses, it doesn't mean all will comply. Best to start when they are in infancy riding tricycles. Teach good habits and usually they'll be retained. IF those who cycled would retain the rules of the road, they would fair better. I guess too, that they must remember they are on a cycle. Around here, most - if on the road - go to the side with oncoming traffic. BUT in some cases, it isn't possible. They could hit a rut and have an accident, maybe even throwing them into the path of the oncoming traffic.

Speaking of bikes on the sidewalks, at least around here, skateboards are becoming a problem. Now, combine skate boards, bicycles, etc, and what room is left for pedestrians to walk safely? NONE. Where do they go?? ON THE ROAD. So, it is a big problem for all. Lawmakers in cities are between a rock and a hard spot often. They want to try to protect all, but at the same time not infringe on people's freedoms.. It isn't easy... try being in "local" government. You try to pass something to keep kids from using sidewalks in a reckless manner perhaps even to save them from injury, and

your hit with taking "away from the kids".
IT IS NOT EASY. SOME ONE ends up on the short end of the stick. It's a no win situation - simply because KINDNESS and MUTUAL RESPECT do NOT exist anymore.

Again, it takes courtesy and rules of the road by "ALL" who use the roads. OR any other place for that matter. When this happens, as it used to be not too awfully long ago, THEN and ONLY THEN can things run a bit smoother.

Lou

1933. AR-2002 problem

Hello.
I bought an used AR-2002 which works fine but when I power up the radio, it always starts scanning memories.
Is it normal ?
Is there any way to start on the last frequency I entered ?
Thks for your help

"I" am not beating you up for your opinion. You're entitled to it.. The
same as I am mine. See my previous post just filed. But first of all, "I" am
not an ASS HOLE. I don't think I bent that low in my reply to you... I
mentioned you may have had a miserable childhood, since you hate cycles so
much or so it seems. I thought maybe you were cheated out of one perhaps as
a child. I mentioned that it may be worth following you in a car, to view
your driving. You did sound as though you had a "road rage" type of aura.
NOTICE I'm NOT ACCUSING. But I NEVER - least not that I can see, called you
an ass hole or a derivative thereof. SO why the problem? Can't we be adults?

I'm merely pointing out MANY use our roads, they don't belong to any one group. RULES OF THE ROAD APPLY TO ALL!

YOU have a point, you made it.. I'm sure there are "some" cyclists who aren't keen to others road usage. I made mine in this post and previous. Only when people again start to respect others and the rules for living among others as they apply, then maybe we can get back to the business of living in a "get a long society". Road Rage among car drivers is - at least here, a bigger problem than cyclists. Take Motorcycles, many hate them too! Buses, same thing. 18 wheelers.. EVERYONE has their pick of what they hate on the road when it is in their way. People pull out in front of them, cut them off, etc to try to save time or just because! Usually resulting in injury or death. So, there are multiple problems when it comes to use of the roads. WE MUST SHARE the road. It wasn't put there for any ONE person's benefit. Furthermore, DRIVING IS A PRIVILEGE granted to you by the state department of motor vehicles, it is not a God given right. WE ALL must earn it. Some choose to ABUSE it.

The main thrust of my posts to start with is NO ONE has a right to advocate HITTING cyclists to cause injury or death, just because they are on the road. That is Attempted Homicide OR could even go to PREMEDITATED MURDER if you "look" for doing those things. Doing that is down right preposterous. There is no easy solution to the problem, it is one created by society and will have to be corrected by society.

Getting back to the D.J. thing, telling others to "run cyclist's off the road" or hit them as the case was. I'd hate to be in the drivers shoes when he/she does that and injury or death results. You're plea will be what? Guilty? Innocent, because someone told you to do it, it wasn't your idea? Temporary insanity? WHAT? We're all born with a brain and a conscience. Just because someone tells us to do something doesn't mean WE DO IT. I can hear your lawyer or the judge OR the DA now... So, you killed this person because some one told you to? IF you were standing on a bridge and they told you to jump after them, would you???? Anyone following this D.J.'s "orders" wouldn't have a chance in court. HE/SHE may be prosecuted for Accessory to commit or some other charge, but the actual doer faces the stiffest penalty I think (you had the option not to follow along).
AND FOR WHAT? HOW STUPID IS THAT?????? Reminds me of say the Jim Jones case or some other where one man speaks and many gullibles follow him. USE YOUR BRAIN that you were given by GOD to "THINK" with.

No, I'm not "beating you up for your opinion". I'm trying to show how silly this all is.. WE ALL must live on this planet til we die. Things are getting out of hand everywhere. It isn't "just" the cyclists. It's is others as well. When we're lying in bed waiting for death to take us, these petty arguments such as this, are so miniscule, you must wonder why they had to begin anyway.
Surely, there are more important issues to argue especially to the higher forms of government who DO have the powers to strip our rights and freedoms OR at least get away with it. Try fighting for something more meaningful. If nothing else, and you want to stay on the cyclists, follow through with your

local areas and try to get a movement going for safe cycling - surely SOME could use it. Be an activist in the right way. The other way solves nothing. An example is: bombing abortion clinics, its not going to present one's cause (anti-abortion) in a positive light. You just can't go off half cocked to present an issue. Use statistics if you can, to prove your case.. Present them, present alternatives (not hitting cyclists).. Try to change things in a positive manner or at least a mutual solution if doable. ANY THING is better than the ridiculous notion of "hitting cyclists" on purpose. Lou

Many areas are not so lucky to have specified riding/driving areas... Again,
the rules of the road apply to ALL.

Gee, how did I know not to use my real name because some wacko like you would be looking me up on QRZ to get my address and whatnot. Why were you trying to look me up? So you could put me on all sorts of mailing lists or come visit my house and throw eggs at it? Grow up!

We may be forced to give out our callsigns on the ham frequencies but anyone that does it here is just asking for trouble. Might just as well post your real email addresses here too while you are at it so you can get lots of spam.

Now instead of trying to find my address so you can pull your pranks, why not read the rest and learn....

Morse Code is also used on 6 meters and above! But you don't have to pass a code test to use them. See?

If it makes sense to you that you need to learn morse code before you are allowed to talk into a microphone on HF, then we know all we need to know about you.

Q. Why do we not need to learn morse code on 6 meters and above to talk into a microphone, and why did we need to learn morse code to talk into a mic below 6 meters?

A. International Law.

But now that International Law has dropped the requirement, you no longer need to "learn how to ride a horse and surrey before being allowed to drive an automobile"

> If you really want to work the HF bands, learn code and be done with it.

I already learned the code years ago when I got my license. The fact that you assume that everyone that is against the code requirement did not learn morse code just shows how limited your mind works.

Likewise, you don't have to be a murderer to know that murder is wrong.

Now make sure your brain is engaged next time before putting your mouth in gear.
Right everyone?

I totally agree with the comment below.

I used to give my callsign and e-mail address on the NG's and had terrible grief as a result.
I never flamed anyone and was as diplomatic as possible if I had a different view or disagreed with a poster.

95% of my posts were to help people. I answered several hundred over a 5 year period.
Being a ham for over 20 years and retired, it gave me a sense of satisfaction as an Elmer.

Then came the spam, false signups, hate mail, false posts in my name, and phone calls.
An idiot even cracked my password to QRZ and modified my Bio in a most hideous way.

Another person here who is female was getting several obscene phone calls a week when someone used QRZ to find her address, then the phone book for the number. She had to bring in the authorities to get it stopped.

So that is why so many regular NG posters are anon.

Giving your callsign and true e-mail address DOES NOTHING TO ENHANCE CREDIBILITY

Hey, Butthead, I looked you up because you claimed to be either a General or an Extra...
you are neither. So why don't you grow up? As someone else said, if you'd put *half* the
effort into learning the code that you do into whining about it you might actually get
somewhere.

Steve, N8KDV, General Class... look it up Butthead!

> I thought you said you had some GOOD news?

It would have been good news if it really were true. I have not nor will I purchase a PRO-96 because it lacks MilAir.

But to say a scanner receives MilAir when in deed it doesn't it one step from fraud. NO the PRO-96 does NOT receive MilAir.

However with software you can "trick" the scanner into thinking it can receive MilAir. This as been done before with other scanners and has always produced POOR results.

First, who wants to lug around a LapTop computer with them when they're out monitoring mobile. I can just see it, all these happy PRO-96 guys carring a laptop with them while walking around an airshow.....Nothing like drawing attention to yourself...

Next, the software will force the scanner to tune to the MilAir freqs however since the scanner was never designed to receive 225-400 the scanner does NOT have the correct filtering to receive these freqs. NOR is the RF amplifiers in the radio designed to pass these freqs. In fact I bet you'll find out there are actually filters in the radio to PREVENT 225-400 MHz freqs to pass. The reason for this is to prevent Cell phone images to show up in in the 225-400 range or images freqs there of....

So in short for a piece of software to advertise that it will allow a non MilAir scanner to receive MilAir is one step from fraud. The scanner will be VERY deaf in this range, something software can not change.

During the late 80's and until I retired from the Army in '95, I ran a BBS in the metro are of DC.

The only reason I ever checked passwords was that, invaribly, when the new member was a "ham", she or he would use their callsign as the password.

So I would send them a polite message asking that the person change the password to something not everyone in the world would know.

The general response I got was: "Thanks, I never thought of that".

Were you using your callsign as your password?

Thanks for letting me know its freeware, wasn't aware of that.

Can't remember which package it was (however it wasn't free) which offered the same thing (can't remember which scanner either). But it would only program the scanners search range for MilAir, not actual channels. But either way bottom line is poor performance as the scanners internal hardware is not designed for 225-400 MHz...

Besides, there is no way to know that those that are giving call signs are not
just assuming that identity and it is really someone else's call sign or name.

There is no way to verify that ANYONE here is using their real name or call, nor
does it matter. No one should be concerned with anything other than the
statements being made.

>> Gray Shockley asked "Were you using your callsign as your password?"

No but I used my old expired (for 20 years) callsign, dumb I know as some sources have your old callsign.
Guess that is how they cracked the password.

But you made a very good point and to add to it -- a regular change of passwords is a good idea also - which I now do.

My e-mail address is an alias from my provider and I change the alias every 2 months or so depending on spamming. I get very little spam these days. My friends and relatives are very tolerant of frequent address changes.

Also I ask friends never to send me an e-mail with several others in it -- (i.e., mass sending of jokes as everyone seems to like to do), rather I tell them to send by using blind copy ONLY --- Bcc. This hides the recipient list.

Sad commentary on today's society -- BUT one must take steps to prevent spam, etc.

Also if you put your e-mail address on a web page -- DO NOT PUT IT IN TEXT FORM -- use a jpeg or gif.
Apparently the spiders can not read the @ sign when it is in picture form.

> Why would he want to do that?

I don't know, why not ask him? He is the one that for some reason feels the need to know my name and address. Not needed to have this discussion. I don't need to search and find some name and call sign that belongs to someone else and pose as that identity as this guy does. At least I am honest and don't need to hide behind someone else's identity.

> All he wants to do is verify that you
> actually walk the walk, and anre not just talking the talk. He's
> posting his call in the clear,

Who says that is HIS call sign??? Just because someone posts with a real sounding name or call does not mean it is theirs. I doubt even he would be so stupid to post his real call sign knowing that his address and other personal info is available to everyone here and then start causing arguments as he is doing. Then again, he doesn't seem to understand why learning code has nothing to do with using a microphone, so perhaps he IS that stupid. Point is, there is no way to know if he stole that call sign or not without further investigation.

Never assume someone posting with a call sign really owns that callsign.

> There is an ancient saying: "On Usenet, nobody knows you're a dog."
> Anybody can claim to be anything (or anybody) they wish. The
> operative word is "claim."

Exactly. Don't assume he is who he says he is. He just wanted to prove he was a General and posted with a general's call sign. I could just as easy find an Extra callsign and pose as that person too. That would not be a nice thing to do, however, as then this nut will go and vandalize the house and property of some poor guy who had nothing to do with this argument at all.

> You make a rather roundabout claim to to be General or Extra and even
> a GROL,

Yeah and I had the first class license too, before they made us turn them in for the GROL which is nothing more than the same questions that is on the Extra ham exam, only without the morse code requirement. If you take the Extra, you might as well just sit through the GROL because most of the questions were taken from one to put on the other.

<snipped>

I would NEVER give my call sign out over here. It proves nothing. Some could hack it to make it look as their own, which adds no credibility to it - as was already stated. OR, as I've seen - some see a call sign and assume you're being a smart ass trying to prove a point. Nah, that is ok. I can chat or give advice or viewpoints without divulging my personal info. IF anyone wanted to find it bad enough I'm sure they could, so let them work for it if it means that much.
Lou

Yeah, we all are supposed to believe that a 50 year old man is going to use phrases like "butthead" and call names like a school child. Next time steal an identity that is closer to your age.

It also loses credibility for you to tell other people to learn code, when you pose as a General who is too lazy to learn and get his Extra class license.

Now that you only have to know 5 wpm to upgrade to Extra which a General would already have credit for, what is keeping you from upgrading?? Perhaps the questions are too hard for you. Those are things you should know before operating a transmitter, not morse code.

Hey, if I go find someone else's call sign like you did and post under that, will I then have the great credibility that you have on this newsgroup to all those gullible enough to believe that a 50 year old is going to use phrases like "butthead"?

Yep, I'm 50 years young Butthead. Nice try. I guess I could upgrade, but why? I rarely get
on
the air. But if I did, I'd be operating some CW. You on the other hand don't even have the
opportunity, why?, because you're to damn busy shooting off your mouth. Get to studying!

Lots of misinformation in this thread. First, there is no fraud here - the author of the Win9x programs was clever enough to open up the coverage on the GRE scanners to include mil-air. This is a bonus, something the radio is not advertised to do. The PRO93 and 95 have good sensitivity at the bottom of the band, gradually worsening to pretty bad at the top end. The software is required to enter these frequencies. Win93 and Win95 are freeware.

The PRO96 seems to have better sensitivity across the band than the older radios and once the expansion is enabled with the software, the frequencies can then be entered from the radio's keypad. Early reports indicate pretty good reception on some of the frequencies at the top of the band. We'll have to wait for someone to do some measurements to see exactly what the performance is. I would not expect that it will be good enough to satisfy someone whose major focus is mil-air in any case. Win96 is not freeware but there is a fully functional time limited demo available to try.

The RF amplifier in the radios is broadband and front end filters are responsible for the frequency selective characteristics users observe. Clearly it is possible to cover mil-air and still meet the cell band rejection requirements - Uniden does it.

Have any of you actually taken an 95 or 96 to an airshow? I have and
my Pro95, programmed at home (no dragging laptop) was able to receive
excellent audio from the USAF Thunderbirds. (200-350Mhz) These are
portable units and I wouldn't be using it on my desktop for serious
scanning. JMO.

Surely, you must have mistaken scanner listeners for ham radio operators.

You buy a 96 when you have no other choice because my area is digital 9600 baud. No 96 and I simply do not listen. No Military Air around here to speak of so it really dosn't matter on that count either.

cool.

i think these radio's need to be benchmarked.
like the pro96 vs the bc250d.
i'd be really interested in how both perform.

Even safer is to just use one password once (keep a text file on your desktop
or hot-keyed).

> My e-mail address is an alias from my provider and I change the alias every
> 2 months or so depending on spamming. I get very little spam these days. My

One of my current web site providers allows two hundred e-mail addresses so
I'm thinking about setting up so I know which passwords (if not all <sigh>)
have been compromised. (however, that's really just curiosity).

I'm pretty crippled up most of the time so I can sit here a lot and it's
sorta fun to watch my spam program do its thing ("Spamfire" for the Macintosh
is a *great* program).

> Also I ask friends never to send me an e-mail with several others in it --

Oh, I hack some pretty weird people off (like "nazi's - not under Godwin) but
wacko's quoting their mental dwarf him/itself).

And then they help beta test my despammer <grin>.

> Also if you put your e-mail address on a web page -- DO NOT PUT IT IN TEXT
> FORM -- use a jpeg or gif.
> Apparently the spiders can not read the @ sign when it is in picture form.

The spiders can't "read" an image - not any of it.

Think of an optical character reader (ocr) and you'll get the "image" <dux>.
It can read the pages but a "straight" ocr can't do a thing with graphics.

Anyway, I have been on line since 1985 and have always used my name and
city/state.

I hate to disappoint you guys, but I'm listening to the Voice of Russia
right now on 17595 kHz on my Pro-96, after having used Don Starr's software
to enable "test" mode. The station isn't booming in; but then it's not
booming in on my Grundig YB400 either. The Pro-96 can hear outside of its
specified tuning range, trust me.

1965. Desktop Pro 96?

Now keep in mind, this is one of those guys that complains we need morse code to keep the "CB people" off the ham bands.

Yet listen to the ham bands on HF and you hear people like this with phrases like this all the time.

On CB, you hear nothing but Spanish now.

Sure! That's why before you can get a license to drive an automobile, you have to pass a test to show that you can ride a horse first. Or why you can't get a license to practice law before you can pass a test to show you can bake an apple pie.

Want to talk into a microphone on HF? Learn morse code first.

Want to use morse code? Learn and pass a test on how to speak and understand Russian first.

Don't be lazy! All you whiners who want to get on the ham bands and use morse code without having to learn Russian first stop your complaining and get studying!

Doesn't matter if you never intend to USE Russian, the purpose of the requirement is to make it harder for people to get a license. I don't ever use morse code, but had to learn it before being allowed to talk into a microphone on HF, so get busy and start learning Russian!

Before you know it, these lazy morse code lovers are going to want to be able to go to the store and just BUY a gallon of milk without having to take any written exams first, or be able to walk on the sidewalk for free without having to learn and pass a test on egyptian hieroglyphics first.

How lazy can you get?

Gee...a straight shootin' lateral thinker (like me) for a change!

Yair... we have the same problem in Oz where some idiots think that
putting a ham callsign at the end of a usenet post is going to provide
some golden aura of revelation about the individual placing the post
and that anyone who doesn't put their ham callsign (if they have one)
on usenet is anonomously 'hiding'.

I mean...you're dead right (and my line of thinking is) that *all*
anyone is going to be able to do with a ham callsign is to run off
like a snivvelling little sneak to a database and (possibly) get a
name and an address. Then what? Are they going to send a posse around
and blow up your household mailbox? Or sit scouring the airwaves
hoping to come across you on-air so that they can give you an earful?

And the argument that putting a ham callsign into a post provides
'credibility' is a load of hooey. Let's face it, if anyone can pirate
a ham callsign on-air...they can sure as hell do it on usenet as well.
And the average newsgroup player would be absolutely *none* the wiser
about the person or the personality on the other end of the post.

Is a mere ham callsign going to tell them anything more about an
already anonomous situation? It is going to tell them whether you're a
beer-swilling yobbo or a connoisseur of fine red wines, or whether you
drive a beat up jalopy or drive a Rolls-Royce.

As I profess, a ham callsign is nothing more than a mere *radio*
transmission identifier and usenet is all about computers, landlines
and stuff. But, no doubt, you have your fair share of poor misguided
souls who seem to think that a ham callsign is some sort of extension
of their personality.

What he's really saying is that if he did have a callsign, (he doesn't), then he wouldn't even give it out on the air for fear that someone actually might look it up in a database. LMAO

The key thing here though is that poor Jeff doesn't have a call, and won't have one till the Morse requirement is dropped.

I'm thinking about buying one of these from the Uniden website. I was wondering if anyone has any good or bad comments about them? Both buying from the site and the scanner. Any tricks or tips? Would you recommend another scanner instead that has the same frequencies? Currently the website is selling them for $89.95 so it seems a bargain.

Any info or comments welcome.

I have recently released a program for generating Bearcat 101 switch codes. It has a few other goodies as well. Details are at http://members.aol.com/xfire905/bcprog.htm.

And now, to prove that I'm actually here to have a conversation, not just to plug my little program [which, I absolutely swear, I will NOT do forty times a week]... Who else in here has a BC101? I was given one back in February by the original owner, who bought it just after it was first introduced in the mid-1970's. Said he didn't need it any more. Well, I'm sure having fun with it! Interesting old unit, this one... I got a photocopy of the manual and code book, but you BC101 owners know how incomplete that book is, so I went to work on writing a code generator for myself because I knew I'd need it.

I'd like to know if any of you have any real experience with programming out-of-band frequencies. I'm sure the receive sensitivity is going to drop off outside of the published bands, but how sharply? Just how far out-of-band can the BC101 go? I REALLY doubt it would actually go all the way down to 10.745 MHz, but that's the lowest frequency represented by the lowest possible switch sequence [all switches UP in the low band]. Might it be possible to pick up, say, the 10m ham band - assuming, of course, there are FM signals? That's not too far below the 30 MHz given in the specs.

Go to Radioshack.com.
Click the "Product Manuals" tab at the top.
Click "Communications."
Click "Scanners."
Click "20-148" or "20-148B."
Click "Detailed Parts List"
Look down the list of parts for the Service Manual
Take down the Cat# for it (10822963) and go to
the Shack and order it.

I see messages like this posted a lot here, I hope
this helps! Just pick the correct category and look
for your particular model.

I have a BC101 that has been in storage for about 5yrs now. A while back I wrote a Visual Basic version that would calculate the switch combos using the instructions from the manual.

I was never able to get the programming to "take" when attempting an out of band frequency. In cases like this, reception on an image frequency was always quite good.

Beware, there's a voltage regulator bolted to the inside of the chassis that gets quite hot and has a tendency of failing. I presume because no heatsink compound was used during manufacture. You might want to add some to yours.

Pompeii's Radio Page has recently undergone a major overhaul. I'm looking for scanner listeners (especially those in Lehigh and Northampton County) to help me get the site moving. All of the frequency information (including 10-codes, unit numbers etc) has been retained and several new features have been added.

- Message boards ? including local boards, mailing lists and select usenet newsgroups. I really need some help getting the local boards moving!
- Download Areas ? freeware and shareware programs for digital decoding, receiver control and more.
- Interactive Links Database ? allows you to follow a link already in the database as well as add a link to your favorite web site.
- FCC Database ? an extract from the FCC files for the Lehigh Valley area, nearly 30,000 records that you can search in seconds!

If you're interested stop by www.pompeii-online.com and select the Radio Page link. When you're prompted to login, simply enter ?guest? for both the username and password.

Your comments and suggestions would be greatly appreciated!

Thanks for reading?

Hi and tnx for reading,

I bought an old JIL SX-200 at a local ham fair.
It works fine, especially on the aeronautical band.

I tried to use it for receiving acars traffic with Wacars, but without
success.
I have a lot of raw traffic, but nothing useful.

Is there a modification to do or another point where I can take the
audio signal other than the phone or rec sockets?

Thanks for help,

Fac

Did you ever distribute it?

I have VB6 here, but I never use it, and I don't really know how to code for Windows. What I need is a really basic [pardon the pun] started guide - "Visual Basic 6 for Dummies" or something like that. Older dialects like PDS, though, which I used for BCPROG... I can usually accomplish what I'm trying to do with that. I started out on TRS BASIC in 1978, but the first computer I owned was a Timex/Sinclair 1000. So, I've been using dinosaur dialects for a long time, but I've just never learned "visual" programming. I wouldn't mind being able to do a version of BCPROG for Windows, though!

BCPROG works just fine in a DOS box. I compiled it so it should run on just about any class of PC all the way back to 8088-based XT's.

> I was never able to get the programming to "take"

I've tried a few CB channels - of course, I wouldn't expect to be able to pick up anything intelligible, but I hoped I might get SOMETHING, however garbled. I can't say I've had any luck. I just wondered if maybe my BC101 might at least be able to detect whether a signal was present.

You're a ham, so tell me - is FM ever used on 10 meters? And if so, what sub-band?

> Beware, there's a voltage regulator bolted to the inside

I've never opened mine up - I used to have a bad habit of taking things apart, or at least just opening them up to see what's inside, but I learned through hard experience to stop doing that. <grin> I got the schematics off the web, but that doesn't mean I have the slightest idea what I'm looking at.

> on usenet is anonomously 'hiding'.

And keep in mind that many just look up and steal a callsign and identity like this other guy did. How many 50 year old men do you know going around on newsgroups calling people "Butthead"?

He made the mistake of not picking a callsign that belonged to someone closer to his real age.

> I mean...you're dead right (and my line of thinking is) that *all*
> anyone is going to be able to do with a ham callsign is to run off
> like a snivvelling little sneak to a database and (possibly) get a
> name and an address. Then what? Are they going to send a posse around
> and blow up your household mailbox?

The type of person that goes around calling people names like "Butthead" when there are statements in a discussion he does not like MIGHT do something like that, yes.

Thus the reason you never post your callsign or personal info. Keep in mind if the callsign this guy was posting was really his, he would not be calling names and starting fights for the same reason that everyone can find his name and address too! But since it is not his callsign, he doesn't care if you would do anything to the house of the poor person who the callsign really belongs to.

Anyone who would be posting with their REAL callsign would not be stirring up fights with anyone on a newsgroup, would they? Or course not. His actions and age have shown us what is going on here.

> Or sit scouring the airwaves
> hoping to come across you on-air so that they can give you an earful?

He doesn't have a license, or he would not have made the statements he did, like that you need to learn morse code to get a ham call sign. Any REAL ham knows you don't have to pass a code test for well over a decade now and can still get a ham license and call sign. The fact he didn't know this shows he is not a ham.

> And the argument that putting a ham callsign into a post provides
> 'credibility' is a load of hooey.

What it provides, is proof that the person is either an idiot, or that he stole someone else's callsign.

> Let's face it, if anyone can pirate
> a ham callsign on-air...they can sure as hell do it on usenet as well.
> And the average newsgroup player would be absolutely *none* the wiser
> about the person or the personality on the other end of the post.

Except when, as in this case, he steals the callsign of someone who is much older than he is not knowing the age of the real callsign holder, and makes statements about ham radio that are not only wrong, but would be something all real hams would know and not make a mistake about.

> Is a mere ham callsign going to tell them anything more about an
> already anonomous situation? It is going to tell them whether you're a

> drive a beat up jalopy or drive a Rolls-Royce.

No, it just provides the guarantee that your house will be egged or rocks will fly through your windows by some angry teenager that can't stand to lose debates on newsgroups.

> As I profess, a ham callsign is nothing more than a mere *radio*

Or in some cases, belongs to the personality it was stolen from.

> The key thing here though is that poor Jeff doesn't have a call, and won't have one till
> the Morse requirement is dropped.

People have been getting ham call signs for over a decade now because the Morse Code requirement WAS dropped that long ago. If you were really a ham, you would have known that.

If the code requirement was truly what was preventing me from getting a call, I could still have gotten a call over 10 years ago. And in the same 1x3 format that the call you are posting under is.

So now that we all know (and you have just now learned) that I indeed could have a callsign without knowing morse code, not posting it must instead be for the same reason I don't post my
social security number, real email address, and mother's maiden name on newsgroups, because only uneducated people make that mistake. There are too many people like you out there that use that information to hurt people just because they can't have civil debates and discussions like mature adults.

You have made too many mistakes in your statements that a real ham would not have made. You also go around name calling with names that a 50 year old man would not use. But since you had no way of knowing the age of the holder of the call sign you are using, you didn't know that until now. Perhaps in a few weeks you will come back posting under a different call sign.

Since you claim to be a general that passed the code requirement, and since you don't need to
ever take a code test again to upgrade to Extra... Why don't you have an Extra class license? Surely you can memorize the answers to the written part? Cripes, 8 year old children are getting their Extra licenses in one sitting, why can't you, since the code is not
even an issue here as it is only 5 wpm across the board (something else you would not know) and you would not need to take another code test to get your Extra.

See, this makes no sense either and shows contradictions revealing lies.

And the further you try to stand on your lies, the more you will have to create and only dig
yourself deeper into contradictions.

I will no longer reply to any idiotic statements made by those just arguing for the sake of arguing.

> You have NO proof of that, and you're still a jackass.

Forget all about that for a minute, and read his statement that I could not have a call sign
until the morse code requirement is dropped. That is very revealing about him! Any
real ham would know this is not true! You can indeed get a call without ever having to
learn morse code, and have been able to do so for more than 10 years now.

So now we have PROOF that he is not a ham, and therefore stole someone else's call sign.

Perhaps we should email the callsign holder at the arrl.net email address that can only be
used by the real holder of the callsign and let the holder know that his call sign is being
used on this newsgroup?

Let's see if he can come back and post the text of that email back here on this group proving
he is the true holder. If he can't do that, then he is not the true holder. We will
wait and see.

If I'm on a ham band calling for help, I don't expect non hams to be
listening.
If there are, well, so much the better, but I would never *expect* any
to be listening. If I get on a ham band, I'm transmitting to other
hams, and other hams only. If I want a non ham, I would get on my cell
phone or yell real loud.

B.S. Most hams on the HF bands know code well enough to get a simple
message through.
I've actually dealt with a marine emergency on the radio. Have you?
Wanna know how the boat got our attention though all the noise on 40m?
CW. They were too weak to get through on fone until we actually knew
they were there. After they got our attention, yes, we went to phone.
Mainly because the coast guard station in Miami was on phone.

>

Yea right....Any other goofy "no one in their right mind" scenarios
you want to dream up?
>
> Common sense folks. You can pretend to say otherwise here on this newsgroup,
> but when the real emergency arises, the last thing on your mind will be playing
> with morse code! Then see how fast you can use a microphone and your voice!

Speed is not usually an issue. Solid copy is more important. Sure, I
would try to use phone if possible. But if not, I can get the job done
on CW. Can you? I guess they would die. Too bad....Another day ,
another $2.34 ...

>
> > They are using

> myself and all my ham friends)

"Most" hams on HF do though. At least well enough to tell someone is
trying to call them. Myself, I know code fast enough to keep up with
just about anyone. They can send 50 wpm, and I'll still copy just
fine. I can send or receive a message using CW just about as fast as
voice. To me, CW is almost voice. Just really monotone...
>
> Send code to us and it will be nothing more than beep beep beep beep. I

> is.

That is a personal problem that shouldn't be confused this with "us".
I wouldn't be so fast to speak for all of hamdom. All of us semi-old
farts ain't dead yet.

Unless you talk to us, you can consider yourself dead in an
emergency.

Not me. I'd fix his ass up right fast. He can use any freaking mode he
wants.
I'm not particular. CW, RTTY, PSK, SSB, AM, FM, hell, I don't
care...Whatever works on their end.
>
> > Thus hams
> > can and will use any means at their disposal appropriate to the situation,

I didn't distribute my VB version because I wrote it as
an assignment for a VB class taught by another amateur
who was fascinated by my little "Beastie101."
The assignment was to convert decimal to binary.
The code for the BC101 does this in a roundabout way
during it's calculation.

CB being AM, probably wouldn't sound very good if it
could be programmed. You would at least be able to tell
there was a transmission on a particular channel.

FM on 10M is generally used above 29.500MHz

29.510 to 29.590 Repeater inputs.
29.600 National Simplex Freq
29.610 to 29.690 Repeater outputs.

Generally, repeaters are paired this way:

29.520/29.620
29.540/29.640
29.560/29.660
29.580/29.680

You wont hear much unless the ionosphere co-operates.
Generally, If you hear a ton of CB skip, then 10M could
be open. Check 29.660 often. It seems to be the
most reliable repeater output.

Have Fun! -N3KCT

Sorry if this is a newbie question. I currently have a UBC3000XLT and would like to upgrade to something with computer control. Liking portability I looked at the AOR MK3. When I asked what there was to listen to above 1300Mhz. I was told there is no "voice" transmissions above this. I'm assuming there is something that can be decoded, etc. that was not mentioned. What is it??? Usually I would gather info off groups such as this but am heading out of the country in a few days and could pick up a U version. Thanks in advance.

Actually MORE people who are not hams could be listening with their scanners than hams with their 2-meter radios. You just don't know they are there because they can't talk back, but they are listening. Just like when the cops say things they shouldn't on their radios because they think the only ones listening are the other cops.

> If there are, well, so much the better, but I would never *expect* any

Even with that mindset, MOST hams don't understand morse code, especially those that would be on 2-meters which would most likely the band you would use to call for help.

> If I want a non ham, I would get on my cell

> B.S. Most hams on the HF bands know code well enough to get a simple
> message through.

Most hams only learn the code to pass the test, then never use it after that. You are also not going to be using an HF radio to call for help, you would use the 2-meter radio. God help you if you had to use the HF radio to get help! Keep in mind what frequencies and bands the police, fire and paramedics use, and why they don't use HF for emergency radio use. They also don't know or ever use morse code in any emergency. In fact in disasters such as hurricanes and earthquakes when we assist them with our equipment and resources, we don't ever use morse code either, we use voice every time.

> I've actually dealt with a marine emergency on the radio. Have you?

No, all mine have been on land, but I am prepared to do so. The testing requirements for getting a GROL means you know what frequencies to monitor, and at what times you have to be monitoring them and all that other good stuff relating to marine emergencies, even though I got the license for broadcast use. Actually, now the GROL doesn't even have any broadcast use, but some stations still like to see that you have it if you want to be chief engineer. It is not required, but they like if you have it. But getting it means you are tested on all this stuff too. Interesting enough, morse code was never a requirement for that.

Even when there was the First Class Radiotelephone Operators License for chief engineers of Broadcast stations, there was no code requirement. You could be working on and operating transmitters operating on 50,000 watts of power and not need to know code, but for a citizen's hobby ham radio license where most are using substantially less power, you needed to know code. It was an international requirement, although Japan found a nice way to get around it, and the US decided that you could get out of the international agreement by getting a doctor's note.

Lazy handicapped people? Or is it that when you are handicapped or injured in an emergency, you may not be able to operate a code key, only a microphone??? Aha!

> Wanna know how the boat got our attention though all the noise on 40m?
> CW.

That doesn't do any good to those monitoring for a "mayday" like every GROL licensee is doing. No mention of Morse Code is ever brought up. You are to ask for help with the international distress call of MAYDAY.

> They were too weak to get through on fone until we actually knew
> they were there. After they got our attention, yes, we went to phone.

Of course you did. You needed to know where they were and all the other details. If they had to pound it out one letter of the alphabet at a time with morse code, they would have been dead before the message ever got out.

> Mainly because the coast guard station in Miami was on phone.

That's right. They don't use morse code, and neither does the military. Neither do ANY emergency services like Police, Fire, Paramedics. No time to play around with morse code in a real emergency. If it had ANY sort of advantage at all, they would require the military, police, fire and paramedics to learn it. But they don't, do they? Of course not. Case closed.

Wow, you didn't even comprehend what you read, did you? It was meant to be a goofy scenarios that would never happen, it was an example of the type of crap the morse

code people always bring up. Glad to hear you think it is goofy like I do, but too bad you didn't even read what it said before you commented on it.

You just proved you are not reading any of these statements, just looking where a paragraph ends and then making up an argument for the sake of argument.

Now everyone here knows you are a troll.

All of these databases are already on the web for free, not $19.95 for 6 months.... And it can't get much fresher than direct from the FCC database (which is free at www.fcc.gov) or from the FAA's own aircraft database (which is free at www.avweb.com)....

I'm not talking about 2 meters. If I'm close enough to use a repeater,
I'm probably just as close to a phone or able to hit a cell site with
my phone. Any emergency that I would use a radio to call for help will
likely be so far away from any civilization, 2 meters will be useless.
I know when I'm on the highway, 2 meters is useless most of the time.
Thats why I live on 40m in the day, and 75m at night when I'm on the
road. I like to actually be able to talk to people on a regular basis.
But just to ease your mind, I can work any band from 160m to 70cm when
mobile or portable.

>

Where do you get this 2 meter mindset at? The chances of me ever using
2 meters to call for help is very remote at best. Also where do you
get these weird ideas about who and who doesn't know cw? Sure, many of
the no-coders on 2 meters don't know the code. But I wouldn't use 2
meters. It's obvious you must not know too many people on HF.
>
> > If I want a non ham, I would get on my cell
> > phone or yell real loud.
>
> Ham or not, you would use the cellphone if you had one over any ham radio.

Maybe, maybe not. My cell phone is useless in many parts of the
country. IE: lets say I drive out to the Fort Davis area in west
Texas. Cell phones don't work worth a hoot there. But my radio sure
will. My radio works everywhere in the world on some particular band.
No cell site or repeater required.

So you say...Quite a few still use it after the test. Maybe you don't,
but you ain't everybody.

You
> are also not going to be using an HF radio to call for help, you would use the 2-meter
> radio.

You must be high. The HF radio is the only one I would ever be likely
to use. If I have to use a ham radio to call for help, I'm too far
away for 2m or my cell phone to be of any use. If I'm not far way, I
wouldn't use a radio to call for help. None of them.

> God help you if you had to use the HF radio to get help!

What do you think the sailboat I mentioned was using? A 70 cm HT? We
were on 40m.
That is HF. Being they were well off the coast of Mexico out in the
Pacific, what would you suggest they use? Tin cans and a string?
Flipper, with a message in a bottle tied around his neck? Oh, I get
it. You would insist they waste their time and valuable battery power,
and uselessly holler for hours on end on 2 meters...:/ I'm starting to
think you are the troll...

Keep in mind
> what frequencies and bands the police, fire and paramedics use, and why they don't use
> HF for emergency radio use.

What do they have to do with anything we are talking about? I'm not
going to get on a radio and talk to the police or whoever directly.
They throw you in jail for that around here. And I don't care to hear
about any emergency clauses...I'm not getting on any public service
freq with my uncertified radio. I wouldn't trust the bastards any more
than I could throw them. I've seen people go to jail for that here in
Houston. One was a "in training" police officer who had a handheld
motorola sabre radio in his car. He didn't even use it. He was just

caught in possesion of it. They dialed around and heard police
officers. They noticed it could transmit. He went to jail. If the
emergency requires that I talk on a public service freq, I guess the
poor bastards will just have to die.
I'm not risking my ass over it. Besides, my radio is not opened up,
and is incapable of such a thing anyway. In other words, it's useless
speculation.

They also don't know or ever use morse code in any
> emergency. In fact in disasters such as hurricanes and earthquakes when we assist
> them with our equipment and resources, we don't ever use morse code either, we use
> voice every time.

So what? I wouldn't expect them to. I do expect at least one of those
hams to be capable of it though...If they can't, they ain't much of
an emergency station in my book.
>
> > I've actually dealt with a marine emergency on the radio. Have you?

Again, what does this have to do with being able to hold a CW qso in
an emergency? I could give a rats rectum what the broadcasters do.
>
> Lazy handicapped people?

You said it, not me.

Or is it that when you are handicapped or injured in an
> emergency, you may not be able to operate a code key, only a microphone??? Aha!

If I can push a mike button, I can work a paddle. Besides, the mike on
my 706mk2g can be used as a code key in a pinch. Looks like I just
knocked down those lame ass excuses.
>
> > Wanna know how the boat got our attention though all the noise on 40m?

>
> That doesn't do any good to those monitoring for a "mayday" like every GROL licensee
> is doing.

What does GROL have to do with being able to work a cw qso in an
emergency? , or even noise in general? Do GROL'ers constantly listen
to the 40m phone band for emergencies? Sounds like a waste of time to
me...

No mention of Morse Code is ever brought up.

So? Most are probably too lazy to learn it anyway...Sounds like a
bunch of rubber duck commando's most likely...I envy them. They really
are OFFICIAL LOOKING radio operators. I wish I could hang 5 or 6 HT's
on my beltline without my pants falling down around my ankles. I'd be
a ï¿½real operator then...

You are to ask for help
> with the international distress call of MAYDAY.

Do you really believe all this dribble you are spewing out? You need
to come by and watch me work CW. I'll straighten you out real fast.
It's obvious you have no earthly idea what you are talking about when
it comes to CW. I can receive CW faster than many of these rednecks
here in TX can talk. The coast guard met us on our freq , not the
other way around. If the boat had CW only, I'm sure they would have
dealt with it. How? They would let me do it and I would relay if they
had no one capable. See how useful I would be in such a case? See how
useless you would be? Kinda like tits on a bore hog...
You'd let them drown, not me.

>
> > Mainly because the coast guard station in Miami was on phone.
>
> That's right. They don't use morse code, and neither does the military.

I think they are capable of it. "coast guard" Pretty sure they are as
a matter of fact. They usually have someone in the office that can
work a little CW if it's really needed. They wouldn't be much of a
coast guard if they couldn't.

Who cares about the military. I'm not planning on bombing a small
country.

Neither
> do ANY emergency services like Police, Fire, Paramedics. No time to play around
> with morse code in a real emergency. If it had ANY sort of advantage at all, they
> would require the military, police, fire and paramedics to learn it. But they
> don't, do they? Of course not. Case closed.

You have all these various agencies stuck so far up your heinie, it's
clouded your mind. I could give a flying #$%^ what they do. I'm only
concerned about what I can do, or have done as far as this thread is
concerned. I'm a ham, not a policeman or EMS. Why would I care what
they do? The only thing I care about is their being able to find my
ass, after I call them.

>

Is this phenomena related to the ridiculous crap some non coders bring
up?

Myself, I haven't brought up anything like that. You said in an
earlier post that no one ever works emergencies using CW. Fine. That's
your right. But, I'm flat out telling you that you are full of crap.
You are wrong and you are too stubborn to even consider otherwise. In
other words, you don't seem to like code, or even be willing to
concede it could be useful in some cases. I would call this a mental
block. It seems you think everyone should be like you and ignore a
potentially useful mode. But many of us aren't you. I learned code
when I was in the 8th grade. "32 years ago". I'm not going to quit
using it just because you don't think it's stylish or useful. It may
not be too stylish anymore, but it's still quite useful to people who
can work it. I could probably handle traffic just as fast on CW than I
could voice. Hell, you gotta write it all down anyway. What's the
difference? None to me. Maybe a lot to you. My handled traffic would
likely be more accurately transcribed if I used CW in bad or noisy
band cdx, than if I used phone. No guessing about letters or spelling.

Glad to hear you think it is goofy like I do, but too
> bad you didn't even read what it said before you commented on it.

Oh, I read that silly crap just fine...
>
> You just proved you are not reading any of these statements, just looking where a
> paragraph ends and then making up an argument for the sake of argument.

You are just proving that even with someone telling you CW has been used in an emergency, "me", you don't want to hear anything about it. You just want to spew back all this uselss GROL crap. I'm not GROL. Can we spell mental block?
>
> Now everyone here knows you are a troll.

Well, I'd rather be a troll than someone who has a mental problem dealing with code users. I have no problems with anyone that doesn't want to use code. I could care less. But for someone to get on here and spread ignorant falsehoods about it, that *will* get my goat. You aren't really qualified to comment on the subject, if you can't hardly work CW well enough to make out an SOS. It's like reading the other day that PSK31 is hard to "tune" and operate, being so narrow. Again, B.S...
Only someone who hasn't used it would say that. See a connection? I can handle emergency traffic on any band, using any mode, including cw. I'm ready for anything. You seem not to be. I have no problems with that, as long as you don't mistakenly claim to be just as useful an operator. If you can't work CW, you are inferior as an operator when compared to me. Thats a fact, not speculation. Notice I didn't say ham. I said OPERATOR. MK

Ha...You haven't seen me in action. I've verbally gouged out the
eyeballs of a few people on this group when they got a bit rectal with
me. But they have to earn it first. Some do manage though. And I
post my real call. I'm not scared of anyone. I live at 11119 Burdine
in Houston. Anyone want to make my day? I'll blow so many freaking
holes in any troublemakers, they will need a good quality stop leak
to make it back home. I have nearly a zero tolerance for horsecrap
and smartasses. I can't stand a smartass in particular...I'll tear
them a new one every time. And I'll do it right here in front of
everyone and their sisters. NM5K said that...

Beastie 101? <chuckle>

Yeah, they really are interesting units, no doubt about that. At least it's still possible to reprogram one of these oldies - how difficult is it to find unused cards for a Sears Cardomatic or combs for a Regency Whamo-10 these days?

> CB being AM, probably wouldn't sound very good if it
> could be programmed. You would at least be able to tell
> there was a transmission on a particular channel.

At least. I know that FM receivers generally ignore any AM'ing in a signal, and I doubt I'd be able to understand anything that was being said, but I'd probably hear some telltale noise. I'm close to a major freeway - hell, here in L.A., they're ALL major freeways - so there are plenty of good strong signals on, say, channel 19 [27.185 MHz]. I can't think of any better candidate for a test frequency.

> FM on 10M is generally used above 29.500MHz

I also have a BC245XLT, but that only tunes down to 29.7 MHz. [I'm writing software for that too, but it's a LONG way from release, or even beta testing. I might never release it - there are Windows packages already available to control that scanner.]

> 29.510 to 29.590 Repeater inputs.

Saved for future reference. Thanks.

> be open. Check 29.660 often. It seems to be the
> most reliable repeater output.

What I'd really like to have is an Alinco DJ-X10. :-) My BC245 definitely won't tune down there, the BC101 might not, but I assume you know what that Alinco can do.

Hiya, Mike! We were just talking about my program. ;-)

Since that page already has the details, I won't go into them here - unless anyone asks <g> - but suffice it to say that my BC101 encoder doesn't have any rounding errors and is, as far as anyone has been able to tell so far, absolutely accurate. I "did indeed get such a program to work."

I'm working on the next version now, with some major enhancements to the CTRL+P "View Programming" list. It will have full editing capabilities and a couple other goodies. Originally, I was going to put all that into a "TALK mode" function which was an interactive command line, but I decided to remove that module - much wasted work, but what the hey - and tweak up the CTRL+P list instead. Those of us who use BCPROG for keeping track of our programming, not just for looking up codes, will find it all VERY useful. You won't need an external text editor to modify BCPROG.INI.

<*boink!*> I just got an idea for another new feature. What if the CTRL+S "save last frequency" key gave you the option of putting that frequency into the first available empty channel, assuming one exists? :-) I could add that in a few minutes.

(Note: There was also a report of the same cheap counterfeit
cellphone batteries being sold in the Chicago Regional
Area at discount and "dollar" type stores.
These counterfeit batteries *do not* have any protection diodes
installed inline with the charging contacts, thus if a cellphone
is placed on a conductive surface the internal cells will
quickly overheat resulting in fire and/or injury. The counterfeit Nokia
and Samsung replacement batteries were believed to
have been made in and imported from China)

---------- cut here ----------

Nokia Cites Fake Batteries in Phone Explosions
http://story.news.yahoo.com/news?tmpl=story&u=/nm/20031009/ts_nm/tech_nokia
_explosions_dc

http://www.infoworld.com/article/03/10/09/HNexplodingnokias_1.html

HELSINKI (Reuters) - Nokia (news - web sites) Thursday pointed the finger
at counterfeit batteries after another of its phones exploded and burned
its user, the third such case in two months, and said original batteries
sold with its phones were safe.

The world's largest mobile phone maker said earlier a young Vietnamese
woman was hospitalized with burns after her mobile phone apparently
exploded.

The incident follows two similar accidents in the Netherlands, one last
week and the other in August.

Following the latest Dutch incident, which left a 15-year-old boy in the
town of Hengelo with leg burns, the country's consumer watchdog said it
would probe the case.

"We don't yet have any information on what is the origin of the battery in
the Vietnam case," Nokia Mobile Phones spokesman Kari Tuutti told Reuters.
"(But) there hasn't been a single case of an original battery exploding
anywhere in the world," he said.

Nokia has cited faulty batteries from independent electronics manufacturers
for similar incidents in the past.

Nokia has said these manufacturers violated security requirements which
should prevent the battery heating up after short circuiting, for instance,
after the phone was dropped.

Contraband and counterfeit mobile phone batteries are widely available in Vietnam in local markets at around $2-$3 a piece compared to $20 for genuine product, a local Nokia spokesman said.

"The biggest issue is with counterfeit, illegal batteries," Tuutti said. "Therefore we recommend that retailers and consumers try to verify the products sold have original batteries."

Mobile phones are becoming increasingly popular in Vietnam despite modest incomes and there are around 1.6 million mobile phone users among the population of 80 million.

> > Interesting enough, morse code was never a requirement for that.
>
> What does getting a GROL have to do with being capable of holding a CW
> qso in an emergency?

What it has to do is, every ship has to have someone with with this license, and if you had the license, you would know that CW is not used anymore in emergencies. The test insures you know what frequencies to monitor and use, and the procedures, and to call using MAYDAY, not CW.

> > substantially less power, you needed to know code. It was an international

> my 706mk2g can be used as a code key in a pinch. Looks like I just
> knocked down those lame ass excuses.

Exactly! So why are handicapped people excused from learning the code then? Besides, the test today only requires you to LISTEN to code not pound it out. So there should be no excuse why a handicapped person is excused from the code, but no one else is!

Fine tuning in to hear someone on sideband, and being able to do all the other more complicated adjustments other than a simple closure of two contacts to send code, requires a
lot more dexterity and I don't see how these handicapped people are excused because they don't
want to use code, but the rest of us who also don't want to use code had to learn and pass it,
only to go and forget it again because we had no intentions of ever using it.

> > > Wanna know how the boat got our attention though all the noise on 40m?

> >
> > That doesn't do any good to those monitoring for a "mayday" like every GROL licensee
> > is doing.
>
> What does GROL have to do with being able to work a cw qso in an
> emergency? , or even noise in general? Do GROL'ers constantly listen
> to the 40m phone band for emergencies?

No, but there were two frequencies you were required to monitor, and at specific times of the
hour to, not any HF frequencies, and you were listening for a mayday, not CW. This changes constantly, and unless I am going to be in a marine situation, I don't need to find out what frequency or frequencies are monitored now unless I am going to be doing that, then I
will update my self on what has changed since I was last tested. But the point here is that there were only two frequencies I had to monitor, and anyone else in a distress situation
would know to use those two frequencies since he had the same license. He would also then know that no one would be listening for morse code.

> So? Most are probably too lazy to learn it anyway...

Is the reason you never learned every language of every country in the world is because you are lazy, or because you don't waste time learning things you don't intend to use?

Everytime you tell someone who never intends to use code that they are lazy for not learning
it, they can come back at you with thousands of things YOU must therefore also be too LAZY to
learn.

Did you ever learn how to perform brain surgery? French Law? How to produce fuel for the space shuttle? Marine biology? Russian sentence structure? Rules of the road in Japan? Egyptian Hieroglyphics? Why not? Because you are LAZY?

Now what if I told you you had to learn one of more of those before you were allowed to talk
into a microphone on HF? You would tell me I was friggin crazy! Now you know how everyone else feels when told they have to learn morse code before they can use a microphone.

I am surprised that people that had to learn the code like I did, never found it and odd thing

when they were told they had to do it. I understand NOW why some people want the requirement.... because "if we had to learn the worthless crap, so does everyone else." Well I had to learn it too, but I am mature and smart enough to realize that it is a silly requirement that makes no sense, and can deal with the fact that others will not have to learn
and do what I had to do. I just take satisfaction in the idea that society has gotten rid of a silly law, rather than be upset that I had to do something and now no one else has to do
it, like a little spoiled child.

Imagine former slaves getting mad that future generations will no longer have to get whipped
and be slaves but they had to go through it. I am sure they are all happy that no one has to go through that hell anymore, rather than fight to keep slavery legal.

In essence, people fighting to keep the code requirement are doing the same thing as a black
man fighting to keep slavery around.

> > > They were too weak to get through on fone until we actually knew
> > > they were there. After they got our attention, yes, we went to phone.
> >
> > Of course you did. You needed to know where they were and all the other details.
> > If they had to pound it out one letter of the alphabet at a time with morse code, they
> > would have been dead before the message ever got out.
>
> Do you really believe all this dribble you are spewing out?

If I was wrong and you were right, then the military would not have dropped the code worldwide, the international requirement for ham radio would not have been dropped as it just
was, and police fire and paramedics would be required to learn the code. But it is NOT that way, it is the way things are now, and that backs up my position, not yours.

> You need
> to come by and watch me work CW. I'll straighten you out real fast.
> It's obvious you have no earthly idea what you are talking about when
> it comes to CW. I can receive CW faster than many of these rednecks
> here in TX can talk.

Impossible. CW requires each letter be sent as up to several beeps each. Speech can get entire words out faster than just some individual letters of a word using CW.

Plus, you can hear the distress and urgency in someone's voice needing urgent attention, but
with CW, a distressful emergency message sounds just the same as a friendly chat to someone tuning across the dial quickly and passing it.

> The coast guard met us on our freq , not the
> other way around.

The coast guard doesn't go around scanning frequencies other that those they are required to

in the idea that you are out there and don't know the rules or didn't bother to carry a radio
with the proper frequencies as required by law.

> If the boat had CW only, I'm sure they would have
> dealt with it. How? They would let me do it and I would relay if they
> had no one capable.

So all around the world, you will be there at a seconds notice for this situation.

> See how useful I would be in such a case?

No, everyone out there who is LEGALLY out there knows what radios, frequencies, and procedures
are practiced in such a situation and knows that no one at the coast guard is going to be trained in decoding morse code.

Now if someone is out there who doesn't know this, it is better off they never be found rather
than living in our world endangering our lives and taking our jobs because they don't follow
the laws.

> See how
> useless you would be? Kinda like tits on a bore hog...
> You'd let them drown, not me.

Let them drown for not following proper procedure? That's like me accusing you of letting someone die because they entered our country illegally, then called you for help in a language you didn't understand and you were unable to help them or know what was wrong.

> > > Mainly because the coast guard station in Miami was on phone.
> > That's right. They don't use morse code, and neither does the military.
>
> I think they are capable of it.

We are all capable of learning how to fly the space shuttle, but most people on the planet have no idea how to fly one.

MOST people in the world do not know morse code. Using that as a cry for help means most of those that would be able to receive your signal would not understand your message.

Same would go for a foreign language in voice, and that is why all pilots and air traffic controllers all over the world in every country must know and speak English. They do not learn morse code.

> a matter of fact. They usually have someone in the office that can
> work a little CW if it's really needed. They wouldn't be much of a
> coast guard if they couldn't.

You are wrong. The coast guard made an official statement when they were no longer going to be using code.

From AP news archive:

Months after the code was abandoned under international convention for ships in trouble, the only private U.S. network of coastal radio stations using Morse has turned off the transmitters.

Simple but slow, the telegraph was overtaken decades ago by the telephone, by data systems capable of reproducing printed words at the receiving end, and by satellite for most forms of communication.

But until the newest generation of satellite and computer technology took hold, Morse code endured for mariners.

Now e-mail is within easy reach for many at sea and modern ships have automated emergency beacons designed to allow rescuers to zero in on them.

``Morse code has finally met its match,'' says Tim Gorman, operations director for Globe Wireless, the company that dropped the curtain on commercial radiotelegraphy by ceasing transmissions at its four stations in Half Moon Bay, Calif., and Slidell, La.

Last week the World War II-era Liberty ship Jeremiah O'Brien, docked in San Francisco harbor, transmitted a Morse farewell to President Clinton. ``History is made on this day as we embark on a new era of communication,'' it began.

The message was translated back into English and sent to the White House the modern way, via e-mail.

The International Maritime Organization officially phased out Morse code Feb. 1 for ships in peril, replacing it with the high-tech Global Maritime Distress and Safety System.

Here is the IMPORTANT PART for you to read....

The U.S. Coast Guard ceased Morse operations several years ago and no longer monitors radio frequencies used for the code.

``There's no government facility listening,'' he said. And now with the loss of the radio stations, there is ``nobody privately listening,''

So, now this incorrect argument of yours can be put to rest! :)

anybody got a pro-96 in canada?

how'd you get it and did you have any trouble with customs? ie: brokerage fees/gst etc.

i was talking to a guy who works at radioshack in the states. he said they weren't industry canada approved and thus would be revoked at the border.

thanks in advance.

>even give it out on the air for fear that someone actually might look it up in a database.
>LMAO

Who says it's "fear"? That so far seems to be the *most* popular
conjecture as to why someone won't tag their callsign on usenet.

What if it's a bit of human power play thing? I mean, the world's full
of all these sticky beaks (you probably call them nosey Parkers in the
US) who want to know information for no other reason than wanting to
know. Some of us reckon that sticky beaks should be kept in their box
and be told what they need to know when they need to know. That's
certainly how I operate.

>The key thing here though is that poor Jeff doesn't have a call, and won't have one till
>the Morse requirement is dropped.
>

That seems to be a common affliction in most nations at the
moment...no different here in Oz. There are plenty of existing
non-Morse licence holders here sitting tight waiting for our
communications authority to implement the recent WARC recommendation
so that they get a freebie upgrade to our unrestricted licence. That's
their prerogative, I guess, if they are prepared to wait. Same deal
with anyone launching into ham radio for the first time...if they are
prepared to wait until the licencing conditions change rather than
learn Morse code, then again that's their choice.

I'm new to the scanning hobby, and of course at this point I already
stumbled upon the cell scanning issue.
I curious as to if its still possible. For what I understand is not illegal
in Canada unless contents of the com
are revealed.
Isn't it that most of phones in this days work on digital networks out of
scanners reach ??

Im sure this question has been asked many times before but since Im new, I
couldn't find recent material on this.

Comments will be apprecciated.

2038. Voltage Sensor Problem?

Newsgroup: rec.radio.scanner
Date: 2003-10-10 03:13:59 UTC
From: V65MagnaFan <v65magnafan@nowhere.com>
Message-ID: <Xtphb.269947$Lnr1.194812@news01.bloor.is.net.cable.rogers.com>

Hi,

This query refers to a Uniden Bearcat BC-235xlt scanner. I suspect that the radio has a defective voltage sensor.

Charged overnight, even a new battery sets off the low battery signal after only a couple of hours. Yet, by slapping the bottom of the unit once or twice, the voltage sensor turns off, thereby giving me extra hours of battery use.

So, is it worthwhile to open the radio? Am I able to adjust the voltage sensor easily at the board?

Short of returning the unit to Uniden, is there anything I can do to repair the unit?

TIA

Again this is a personal problem. It takes no more dexterity to work
phone on my rig as it does CW. Probably less.

>

> > > > CW.
> > >
> > > That doesn't do any good to those monitoring for a "mayday" like every GROL licensee
> > > is doing.

What in the hell are you talking about? Who cares about GROL? I don't
have anything to do with GROL. I don't really care what they do. It
has nothing to do with me, or amateur radio. Hams don't monitor for
maydays. If a ham has an emergency, he gets on the radio and calls
someone in a precise, orderly, military manner. Gasping out histrionic
calls of mayday is not the normal procedure used.

> >
> > What does GROL have to do with being able to work a cw qso in an

Again, you are utterly confused. Get off this GROL crap. Amateur
radio is NOT GROL in any form or fashion.

He would also then
> know that no one would be listening for morse code.

No, probably not on a GROL freq....Good grief...You are numb aren't
you. What ever it is you are using, can you send me some? I'll even
pay the shipping.
After reading all this crap, I think I need a new wonder drug to be
able to cope. :/
>
> > So? Most are probably too lazy to learn it anyway...
>
> Is the reason you never learned every language of every country in the world is because
you

You are a silly man. I could care less if they learn it or not. I'm
too lazy to do lots of things. So what? Who gives a rats rectum. How
does this pertain to your original claim that no one ever uses CW in
an emergency. Which I proved you wrong by the way...

>
> Did you ever learn how to perform brain surgery?

No, sounds like fun though. Do I get to stick my finger in it and
wiggle it around?

> French Law?
Naw, I'd rather find a good french whore.

How to produce fuel for the
> space shuttle?

Naw, the only fuel I produce is when I fart. Unfortunately, not enough
energy to propel the shuttle to any decent altitude. I did make some
printed circuit boards that are on the shuttle and in JSC though. Does
that give me 2 points extra?

Marine biology?

Yep, I like to dive with the fishes. I even met Mr. Limpett once. Even
he knows morse code.

Russian sentence structure?

Can we spell VODKA?

Rules of the road in
> Japan?

They have none.

>Egyptian Hieroglyphics?

Yes, lots of fun. But you would never be able to deal with those. If
you can't master a measly 5 wpm of morse code with only 26 letters and
10 numbers involved, those hieroglyphics are sure to bite you in the
ass big time.

>
> Now what if I told you you had to learn one of more of those before you were allowed to
talk
> into a microphone on HF?

Well, I would do it. Like I actually did. Hell, I was copying 18 wpm
when I took my first novice test. The dog ass slow 5 wpm test gave me
time to twiddle my thumbs, fart, and belch all while still maintaining
100% solid copy.

You would tell me I was friggin crazy! Now you know how
> everyone else feels when told they have to learn morse code before they can use a
microphone.

Well, hell yes I know. I grew up in the ham radio of the not so
distant past, where ALL hams had to know morse code. It didn't bother
me at all. I thought it was fun. I worked nothing but CW the first 7
years I was a ham. Didn't even own a mike.

>
> I am surprised that people that had to learn the code like I did, never found it and odd
thing

As I read on further down , it occurs to me, I'd be here another 45
min or more answering all your questions and goofball quotes of
commercial radio regulations, etc. I have better things to do than
banter with someone who is totally confused, and doesn't know the
difference between commercial and amateur radio. Or GROL and amateur
radio...Sooooooooo

SKIP.....

>
> Here is the IMPORTANT PART for you to read....

Whoa daddy! stand back!
>
> The U.S. Coast Guard ceased Morse operations several years ago and no
> longer monitors radio frequencies used for the code.

Where ever did you get the idea that I'm in the coast guard? What the coast guard does doesn't mean jack to me.
>
> ``There's no government facility listening,'' he said.

Who cares. I have my own station. More than one, in fact.

And now with the loss of
> the radio stations, there is ``nobody privately listening,''

Are you kidding me? You really are confused.
>
> So, now this incorrect argument of yours can be put to rest! :)

Argument? The orignal "argument" was that you said no one ever uses CW for emergencies. As one who has been involved with one myself, I proved you wrong. You retort with a bunch of confused, non relevant jibber jabber.
As far as the code- no code argument, you are barking up the wrong tree. I could care less. I will not involve myself with that. I have better things to do.
I have my ticket. I passed ALL the code tests with a perfect score. What you do is not really a concern of mine. If you want to go through life as a confused code whiner, doomed to a life of multiple rubber duck misadventures, don't let me stop you. It's a free country.
If you spent 1/4 as much time practicing the code as you do whining about it, you would be at 40 wpm by now.
We now return to our regularly scheduled program.
MK

Sounds like an intermittent connection, if all the battery contacts are
clean it would probably be inside. If you continue the "Slap" routine you
may well damage something else.

news:01c38a0d$08353ae0$0125250a@simkoxfheifcdjqq:

Thanks for the response, I have been away from this group for a couple of days and didn't see your post. Apparently I am plagued by a pager/cell tower less than 3/4 miles from my home, at 152.18 MHZ and the local PBS broadcaster whose antenna/s are about 2 air miles away, simulcasting their shows on TV channels 13 (at 213.00 MHz) and 16 (at 485.00 MHz).

Though the move to the outdoor antenna finally provided me with the ability to monitor the local police using an antenna larger than a HT stub antenna, and has provided additional "Service Search" capabilities with the Uniden 785D that I was completely unable to do with the HT stub (such as Aircraft and CB), the Marine and Railroad Frequencies are still interfered with (to a degree) by the Pager (most of the interference coincides with the presence of the 152.18 Pager signal), as well as a permanent overload (even with the receiver attenuated) in the upper 400 MHz ranges (460 and up). It's quite horrible listening to the PBS broadcast regardless of the frequency that the radio is tuned to.

I am considering the purchase of some PAR filters, the notch for the 152 MHz pager, and perhaps a more customized one for the 485 MHz PBS station. Before I send the $160 for the filters, I wish I knew how to determine the actual offenders, lest I end up with too many filters and too little money.

I also looked at a Log Periodic scanner antenna, http://users.cis.net/kingpop/Scan-log.htm hoping that most of the desired signals are sufficiently forward of the antenna, wishing to orient the antenna with the cell tower and PBS broadcasters to the rear. I don't know if the Rear Rejection would be sufficient to accomplish the interference relief that I need, nor am I entirely sure of the location of the desired broadcast antennas (Police repeaters and such)

I'd like to have near 100% usage of my Uniden, but I seem to be in Radio Alley. I have a Yaesu VX-5R Handheld Transceiver that I always carry. I bought a Stub Antenna for it, hoping to reduce the intermod that plagues it here. Funny thing is that it actually rejects the intermod better when used with its original antenna. In either case, for the most part, while driving throughout the city, the radio works fairly well, except of course when I near my home, then the intermod starts. This is truly a terrible area to live while attempting to pursue a scanner hobby.

My onmi-directional antenna looks like the above (assuming that the pieces are re-assembled on your computer like I placed them on mine). Part of the receiving element extends down the support bracket (but is insulated from same), so that with the above image, at the center (+), it would extend into the computer screen, the other part is connected to the center radials. If I were to attempt to place a reflector on this antenna, it would, I trust, be electrically connected to the center radials but insulated from the brackets? How would I determine the size and spacing?

Regards.

I have been a scanning hobbyist now for years 25 to be specific (crystals in the ole regency 8 channel). This is a fantastic hobby welcome aboard. Things are very exciting in the hobby and it keeps getting better.

Cellulars?? One word. Boring. Yes there is some cellular activity but not much as most have moved to digital. Literally you get maybe two to three hits over the spectrum as compared to 10 years ago when you would get hundreds.

Cellulars aside, there is soooooo much to be heard. My advice, take your scanner and search from 0 to how ever high it goes. Do this first before plugging in any channels and just test the waters. Its amazing what can be heard out there.

Good luck.

As a local pilot and airplane owner in the DC area, let me assure you
that this was never a problem BEFORE 9/11 and it still isn't.

The article lacks perspective too. You could fly a business jet at
20,000' over the National Mall LEGALLY. It would be even easier to do
a lawn dart maneuver with one of those.

The customs service patrols over DC are nothing less than harassment
of general aviation, pure and simple. Three very popular local
airports have effectively been shut down indefinitely because those
idiotic wankers in Homeland Security don't understand the real threat
or how it can be countered.

Meanwhile, they have pissed off every pilot who flies in this area and
are actually less secure for having done so. If I saw suspicious
activity on an airfield before these dumb regulations and notices went
in to effect, I might have reported it to the FBI or the FAA. Today,
I'm not so sure.

Let's not forget how the "20th hijacker" was discovered and
apprehended. Does this administration really want to piss off the
very people they need to keep such things from happening again?

I reviewed the PRO-2045 in Feb. 1997 Monitoring Times and
the BC9000XLT in June 1996. I own two BC9000XLTs.

The BC9000XLT is more radio and a better value.
Both models use the same optional CTCSS decoder board
which I recommend.

The following remarks are from my PRO-2045 review:

PRO-2045 vs. BC9000XLT

"...The PRO-2045 vaguely resembles the top line Uniden/Bearcat BC9000XLT,
but there are several differences.
The BC9000XLT is larger and housed in a metal cabinet and frame.
The smaller, lighter PRO-2045 is entirely plastic. The main
circuit board in the BC9000XLT is much larger and many stages are
shielded in separate metal compartments.

"The BC9000XLT tunes these ranges, censored in the PRO-2045:
54 - 108, 174 - 216, 894 - 896.1, and 1000 - 1300 MHz.

"The IF arrangements are very different, too. The BC9000XLT
IFs are 254.4 or 380.7, 58.075, and 5.5 or 0.455 MHz,
depending on the band and mode. The PRO-2045ï¿½s lineup
is 380.7, 10.7, and 0.450 MHz.

"Both models incorporate a yellow backlit LCD display,
but BC9000XLT users can dim or disable the backlight.
The BC9000XLT has several selectable tuning step sizes,
alpha display, WFM mode, recorder activator, tape jack, and
500 channels versus 200 in the PRO-2045.
The BC9000XLT lacks preprogrammed weather search and alert.

For me the bc9000xlt is better radio. Since im a big fan of alpha-tag (and he give 16 chars to display a frequency), general coverage and ctcss the bc9000xlt is a most usefull radio for me. It's not a yupiteru or a aor but he is pretty nice, good sound and fast as hell.

I got 2045 ans 2006 and i will chose the bc9000xlt before them both. I will have to try a bc780 one day ...

The BC9000XLT audio quality is good. The radio has a "high cut"
audio filter key which I don't use.

Like just about every other scanner with a top, bottom, or
side mounted speaker, the best audio is obainted by using an
external speaker pointed at your face.

I miss the old style scanners which contained a speaker
mounted in the front panel and which pointed directly at
the user instead of at the floor or ceiling. :-)

Right. I understand that.

I was hoping that someone familiar with the unit could guide me through the circuit board, perhaps to find a pot that regulates the V sensitivity.

I opened the unit today and saw no such pot. I also saw no cracks, splits, or defects.

Then again, I'm not an expert.

Any ideas?

From your description, I would agree that it sounds like an intermittent connection or oxidized battery contact. An easy thing to do is to clean the battery contacts with some light abrasive (fingernail file or emery cloth). Oxidation on the contacts isn't always visually obvious.

It is unlikely that the "voltage sensor", as you put it, is malfunctioning because that is generally a hard-wired voltage threshold detection circuit or a firmware-programmed threshold using some sort of analog-to-digital conversion depending on the age and model of the scanner--neither of which would drift (especially if smacking the unit changes things--that's DEFINITELY a sign of intermittent connection). In other words, there probably isn't any kind of adjustment you can make. You're going to have to track down the intermittent connection.

If you have a cold solder joint, for instance, where the battery contact is soldered into the circuit board, it also may not be visually obvious to the untrained eye. If you're confident enough, you could try re-flowing any questionable solder joints with a low power soldering iron.

But first, as I said before, clean ALL of the battery contacts. That's easy and quick, and has a reasonable likelihood of being the problem. Let us know if that works.

My comments were in response to your query on directionality and they are probably not useful in your system. I am not an antenna expert, only an amateur experimenter, and I have not seen any documentation on reflectors and directors on anything except half-wave dipoles. Although, as I move around town and examine TV antennas it appears to me that they are making some sort of use of reflectors, directors, or both.

But the function of reflectors and directors, on the receive side, is to increase the amount of the desired frequency reaching the antenna. They may not be very useful if the intent is to scan a wide range of frequencies.

N2AH appears to have your answer.

I couldn't find the original post, but....

Another one hung up on the coast guard...How many times does a person
have to say they have nothing to do with the frigging coast guard.
Jeez....Ham radio operators are INDIVIDUALS!!! Not a section of the
coast guard, GROL, or any other funky alphabet soup letters. The ONLY
time I will ever deal with the coast guard is if I call them on freq
myself, which I have done in the past. And CW is not slower and more
cumbersome to ME. Maybe to you 5 wpm slow pokes, but not my 55-60 wpm
ass. I'm like a frigging CW machine, and I don't even have to write it
down unless I need a hard copy for something.. Using CW to ME, is no
different than any other mode. Well unless the band is noisy or in bad
shape, then it's superior to most others. You no-code people need to
get a grip...I'll use whatever works the best at the time, or whatever
is first sent to me. If someone calls me on CW for help, I will stay
on CW unless they request otherwise. To do anything else would be
pretty damn stupid. Some qrp rigs are CW ONLY!!! I know that must chap
many asses all around the country, but you all need to get over it!
> >
>
> What are you going to use when HF propagation is too weak to support
> voice???

They will whip out their 2m HT's. What else? This thread is
unbelievable...
Sheesh...Who gives a damn what mode I use, if I get the job done. And
I DO get the job done.

Bravo!!! It's nice to find some common sense out here in the
wilderness. You summed it all up in a nutshell that maybe even ole
Jeff can grasp and understand. Then again, maybe not...:(Most "live"
emergencies that a ham would handle on the air, are from other hams in
trouble. The sailboat I mentioned was a ham in a sailboat. Not a
commercial vessel. I would think it quite rare to hear a commercial
vessel call a ham for help. But we can handle traffic to and from
anyone that might need it. But we can do it any ole way we please. If
the general public can't decipher it, thats just too bad. MK

I have 2 PRO-2045's and really like that radio, good audio as well.

I had 1 BC9000XLT. Didn't like it because it received so many Cell phone images in the 225-400 MHz range it made MilAir receiving worthless. My closest Cell Phone tower at the time was over 5 miles away!

If you want to monitor MilAir then say away from the 9000XLT, that was the only complaint however I had regarding that radio.

But recently I've pickup up used (but in great condition) PRO-2045's for $100, that's an excellent scanner for $100. Great MilAir preformance.

> Hi all, the BC-8500XLT, any good?
> Any major differences with the BC-9000XLT??

The BC8500XLT had performance problems, including
audio hiss and annoying squelch tail.

The BC9000XLT is more flexible and a
much better performer. For starters, the modes are selectable
on BC9000XLT and fixed on the BC8500XLT.

I reviewed a BC9000XLT in March 1995 Monitoring Times,
published tips and modification information
in June 1996 Monitoring Times.

Even the people who want to drop the code testing requirement will eventually discover that CW is still quite useful for that situation. I think if the testing is dropped, a fairly large number of hams will decide to learn it for that very reason.

The difference will be that these hams will have had a chance to experience HF and its many thrills and challenges THEMSELVES before they learn the code, which means that learning the code will be that much more rewarding because they can see the practical application of it. Not everyone has the foresight to understand this about the CW mode without having experienced it themselves, and forcing the issue through testing can't change that; the testing merely attempts to make hams prepare themselves for HF work.

I also find the audio pretty good. Sometime i use a external speaker but the internal one is ok and the power is very good.

Also, the ctcss board is a must. Actualy i don't have one install and most of the time i prefer scan with my vx-2r. I will order one in a couple of weeks.

I suggest extreme caution using this method, and using this
method only when corrosion or foreign matter is clearly
visible.

The use of any sort of abrasive may result in the removal of
the plating from the battery contacts. Once the plating is
gone, the pot metal underneath does a Very poor job of
conducting. The only fix is to put a layer of solder on the
pot metal, and gently file It down to a flat surface.

Cleaning terminals that don't show significant crud can be
performed with an electronics cleaner or alcohol and a
cotton swab or rag, or perhaps the eraser of a #2 pencil,
which does have a light abrasive quality to it, but would
take serious effort to remove the plating.

FYI the BC9000XLT also covers 760-823.9875mhz
The BC780XLT does not.
As far as the images, I've never really had a problem with that. I've had my 9000 since 1996 and love it.
I monitor Milair all the time with it and it performs farely well. So I guess it depends which batch your 9000 came from.
But George has been monitoring Milair a lot longer than I have, so he generally knows what he's talking about.

It could be which batch, I've heard others say they've not had the
problem while other have. Might also have to do with how close you are
to 900 MHz towers. Back when I had mine all cell phones were 900 MHz,
today there's a lot of 1900 MHz cellphones if I'm not mistaken.
Possibly the 900 MHz band today isn't as loaded as it was 6-8 years ago.

Celluar is digital and unless you want to spend time monkeywrenching a
scanner to receive the frequencies, scanners sold
in Canada and the U.S. are cell blocked. It is illegal, but statistically
the chances of getting a firm tap on the shoulder for
the actual act (unless you wire it in to a web site or do other dumb things
with what you have discovered) is very slim.

Celluar is boring anyway. I mean who wants to hear some empty helmet high
school girl who goes through one boyfriend every two weeks say "Hi! I'm at
the mall". Or some guy driving a toy car Honda Civic with a whale tail say
"Dude! we're
meeting Stan and Tracy at McDonalds. You shoulda seen the faces on those old
farts we blasted by at the intersection of [name of intersection here]". If
you think your going to hear your sexy 50 year old neighbour that has a hot
body that would make any boy have a wet dream say to her husband that she's
hot, wearing nothing but a thong and cooking apron and wants hubby home as
soon as he leaves work, you'll be sitting in the chair growing alot of
cobwebs waiting for that to happen.

Much more to listen to out there. Emergency Services, aviation, railway,
marine, RCMP, etc. But most major centres have
gone digital, and a few are APCO-25, which is not available on publicly
available scanners.

Well today's cell phones are still using 800mhz, the only difference is that they are digital. But they use analog to fall back on when they can't find a good digital signal.
The PCS and tri-mode cellular phones use both the 800mhz cellular band in digital,analog and also have
the ability to go to the PCS band which is 1.6-2.0ghz.
All PCS is digital, where cellular is not.
The 9000's had two different sets of serial#'s. And from I understand there are slite differences in the units.
I'm not sure if it was software or RF.

Lou

1. Change frequency.
2. Use relaying to get messages through. (After all isn't that we supposedly train for, as well as one of the principles of the Nation Traffic System??

Nowhere is it said that in an emergency that the message MUST make it in ONE "hop." (i.e. no relaying) I am quite sure that message traffic from larger incidents like the big earthquake in California quite a few years ago didn't make it out of the area in within just one hop. (The traffic being sent around the country that is)

Somewhat corrected.

It's $499 U.S. but...

Would be close to $1000 once the exchange and taxes are factored in, not to
mention any state taxes that may apply upon
purchase. Some stores will forgive the state sales tax for Canadians, but
others will not.

At that price certainly would not be the first on the block to have one
unless it works within the APCO-25 GE/Erickson
enivroment we have here in Vancouver (and what ever might be used in
Calgary, Edmonton, Toronto or other major
centres).

Not sure exactly which of two kinds are used, but the Pro-96 will decode
Phase I C4FM only. It does not decode
CQPSK, nor is anything able to decode Phase II APCO-25 systems right now.

..and if the emergency services decide to upgrade and encode the APCO-25
differently than what is now used, then what?

The pro-96 is going in the right direction, but not there yet. Still a bit
of more travelling to do.

.

In article <R5Ddb.7580$NX3.4403@newsread3.news.pas.earthlink.net>,
steelgtr_95127@yahoo.com says...
> Technically, exactly what is going on to prevent 2 sides of the call?

Aside from the issues of being in range of the remote unit, the problem is that a mobile phone call operates on two frequencies. This is necessary so that it works like a regular phone call, with the party on one side being able to interrupt and the party on the other side able to hear the interruption even though (s)he is still talking. That's called full-duplex operation. With regular two-way radio, you both operate on the same frequency and only one can transmit at a time. The other party has to wait until the first person has stopped transmitting in order to be able to be heard by that person.

In full-duplex, each side of the conversation has to be on a different frequency. You can't transmit and receive on the same frequency at the same time on the same antenna -- just doesn't work. The minute you transmitted, you'd be jamming yourself.

news:01c3802c$00d94060$0125250a@ijujqtfjlxdptwlr:

Ah, if only the tone squelch was that easy for me. Pittsburgh, my city of residence, has deigned to use the same tone on virtually all their 12 active police channels. Often, with my Yaesu VX-5R, the adjacent channels erroneously open the squelch, so I get to listen to very weak signals from the wrong channel. Also, with my VX-5R, once the squelch opens, and the legitimate signal is dropped, there is a delay until the squelch circuit realizes that the requisite tone is gone, so I get to listen to more gibberish between legitimate calls.

http://www.wpascanner.com/pa/pghdps.htm

For the police:

453.100
453.250
453.400
453.550
453.700
etc.

For the local Port Authority Bus:

453.050
453.200
453.300
453.500
453.600
453.750

As the legitimate tone is dropped, say for police channel 453.250 from above, I get serenaded with a cacophony from the bus radio at 453.200 (or 453.300, I don't know which)

Was this very bright for the police radios to have been configured so that the tones are identical on so many frequencies, is there a reason for this?

Unfortunately the VX-5R has no Attenuation option, so that in some areas of Pittsburgh, the radio is virtually useless.

Regards.

Investigate the reason for the lack of sound. Try using an external speaker
or headphone if there is an option for such. Most often the external
speaker or headphone jack has provisions for disconnecting the internal
speaker, if this contact was excessively dirty, feasibly you could have
symptoms as you describe without any real problem with the scanner.

Do you have a Free Bearcat 100, Manual, and original box, or do you have a
Free Bearcat 100 Manual and Original box? There is quite a difference.

I once ran an ad for my Mercury Lynx, "Free to good home". I actually only
got one call for it, and they (Father and Son) took the car, there were no
"catches". It's just that the car needed some work to pass inspection in
Pennsylvania, I didn't feel like doing the work, but the car was sound
otherwise. I saw it still on the road, legally inspected, 2 years later.
All I would have gotten for it was about $25 for scrap.

If he would have written it this way: Free Bearcat 100, manual and box, it would imply that he was giving away the Bearcat 100. He did not place the comma in there! Without the comma he is simply giving away a Bearcat 100 manual and box.

The comma is everything, so is the ability to comprehend!

J.C. Jones <> wrote in news:78dbaa8d64e41b7044e282066ca8cad6
@news.teranews.com:

Other than troll bait, I am somewhat amused and somewhat offended. Sans the recreational use of scanners and your depiction of those that use them, how would we describe the average non-scanner user? The non-scanner user never has to worry about carrying his/her body to various sites where the scanner may offer enhancements. I attended the Railfest recently in Altoona PA, scanners abounded. Problem is that to a degree, your description was accurate of some of the people that I observed with scanners that day. Others looked and were quite educated. Most have an enhanced knowledge of technology that accompanies the hobby, the ordinary non-scanner user doesn't know what a Mega Hertz is, likely attributing it to a significant pain. Look at HAMS, some also fit into your category, but they have greatly enhanced technical skills.

The real American physique comes from years of dedicated and incessant changing of television channels, masterfully wielding the remote, bodies toned by endless journeys to the refrigerator and toilet. Mind numbing, pre-conceived ideas promoting whatever the current trend in political correctness has determined that we need inculcation in. Never mind the spontaneity of the scanner, the pathos of life, the humor of misunderstood and misquoted communications, the true awareness of the crime in your neighborhood. Once, the dispatcher told the police to be on the lookout (BOLO) for a car and she described it as having "tinted wendells". An officer called in and asked, seemingly for clarification, if the car had "tinted wendells", and in the background you could hear the guffaw of the other officer in the car, obviously in disbelief that his partner repeated the misquotation verbatim. Or the other day, a woman at a local Hairstylist, was apparently having an anger fit, likely about how her hair looked. Oddly enough, the Shop was called "Tantrum Tanning". How the dispatcher kept a straight face is beyond me. Anyway, the officer said "in other words, there is a woman having a tantrum at Tantrum". The dispatcher responded that was correct, and said that she had also thought of that, she kind of chuckled. See, no laugh track for the mind numbed American. No one told these people when to laugh, no ability to rewind to hear it again.

See this page for the verification of the existence of the "Tantrum Tanning Salon"
http://www.pittsburghlive.com/x/tribune-review/living/fashionfyi/s_97183.html

I like the scanner dweeb comics, but was unable to find an online page with examples of them. If I were or am in the category of scanner dweeb,

so be it, there's a lot more degrading things to be associated with.

Regards.

If HF isn't supporting voice propagation, to what frequency would you suggest changing? Oh yeah, VHF/UHF when you're too far out to reach anybody. Right. Disasters don't just happen in only in areas small enough where you can relay out. If some of the island nations (or states like Hawaii) get hard hit, say by a hurricane, your only chance may very well be HF.

VHF/UHF is fine for short distances but if the next active station is over 20 or 30 miles away, there is often very little chance of a relay. Many islands are far more than 20 or 30 miles from the next nearest inhabited land mass. On the other hand, with HF, one can reach hundreds of miles even with minimal antennas. This gives you a chance to set up a relay. But if propagation is poor, voice may not be intelligible yet CW will often come through quite clearly under those conditions.

> I have heard Vancouver Fire a few weeks ago in the 800Mhz band
> Will anyone being coming out with a radio that can monitor this type of
> radio system???

Vancouver went to EComm in the mid 1990's, but not all municipalities and
districts are incorporated into it. Delta has
just started phasing into it.

Some areas of the GVRD are still analogue. As for EComm, three words come to
mind.

out of luck.

EComm uses one type of APCO P25 (one of three or four kinds), and unless it
is the same as that can be picked up with a Radio Shack Pro-96, no dice.
Word from the local scanner hobbyist web site is that the Pro-96 will not
work on EComm's purchased version of APCO-P25.Wouldn't spend the $1000 CDN
it would take to get one from Radio Shack in Bellingham yet.

Vancouver Fire uses some analogue frequencies. Burnaby Fire is all analogue
and is quite open. I've picked up Burnaby Fire as far away as Langley and
West Vancouver.

Surrey is analogue but you practically have to be there to get anything.

Once you're up the valley, Abbotsford to Hope is all analogue including fire
and RCMP and Abbotsford Police.

EHS (BC Ambulance) uses some analogue frequences in the Greater Vancouver
area as does the RCMP but haven't gone through their frequencies yet.

As for Vancouver Police, zero. VPD is all digital, and also uses an
encrypted computer aided dispatch system, so
you wouldn't be able to hear anything if the constable was running your
licence plate because of the booting through the
yellow light you did on Hastings.

Good place to get details is Scan B.C. (www.scanbc.com).

Another is Trunked Radio (http://www.trunkedradio.net/). You'll find trunked
frequencies for the Vancouver, Victoria,
and Western Washington area (amongst everywhere else in North America).

The Washington State Patrol is also analogue as is Seattle Police (Seattle Police is trunked).

Cheers!
PK

> What are you going to use when HF propagation is too weak to support
> voice???

That was already answered higher up in the thread, I will requote that part:

The International Maritime Organization officially phased out Morse code Feb. 1 for ships in peril, replacing it with the high-tech Global Maritime Distress and
Safety System.

So that answer would be, the Global Maritime Distress and Safety System.

Satellites and GPS are far more reliable than HF. Keep in mind code was invented and used because there were no microphones invented yet. Likewise, HF was ok before we had satellites and GPS. When a friend of mine recently traveled overseas, I was able to track the entire flight from several free websites that you just enter in the flight number and you get a constant read out of speed, altitude, location and maps to show you exactly where the plane was the whole time. With technology like this, no one even needs to call for help anymore, when the signal stops, we know exactly where it was when it stopped and can go looking for it.

Why do so many people want to throw all this technology away and force everyone to stay with antiquated forms of communication like HF and Morse Code?

What next? Will they start a movement to force all of us to get rid of our washing machines and have to use old washboards instead so THEY will be happy?

I for one, gladly embrace new technology that makes life easier and better. Wanting to play around with HF and Morse Code for a hobby to get a nostalgic feeling of yesteryear is fine, but be realistic and don't come up with ridiculous ideas to force others to use it.

People who bowl or play golf don't force everyone else to do that either. Hams that use microphones don't tell morse code lovers they have to use microphones, so why can't the stubborn headed morse code loving hams just enjoy their hobbies without forcing everyone else in the world to do what THEY want to do.

Someone did it. Here are some measurements (with a comparison to the
PRO-95):
http://www.starrsoft.com/software/win96/freqtest.asp

There's a "hump" at about 300MHz. A few posts on strongsignals suggest
that MilAir reception is acceptable. (One user indicated that he was
listening to air and tower comms 35-50 miles out).

Or ...

The International Maritime Organization officially phased out Morse code for
ships
in peril, replacing it with the high-tech Global Maritime Distress and
Safety System.

> If HF isn't supporting voice propagation, to what frequency would you
> suggest changing?

If you were ever out in that situation LEGALLY, you would know the answer,
because you are supposed to know the frequencies before you leave shore.

The International Maritime Organization officially phased out Morse code
for ships in peril, replacing it with the high-tech Global Maritime Distress and

Safety System.

Satellites and GPS. To HF as microphones are to morse code keys. To HF as
telephones are to telegraph systems. To HF as cars are to horses and camels.

No we do not wish to throw away all the new technology. We want to keep a
viable communications mode in case that new technology fails. That is all.

The invention of the typewriter and later the word processor does not make handwriting completely obsolete.

This new technology that you embrace was invented by the same people who want to keep code. Complex infrastructures should always be backed up by simple basic methods.

Hello:

Brand new at this. Have a 780.
Would be most appreciative for any help with the following, please:

a. For a type 1 fleet map, do I want the Status Bit to be On or Off ?
Why ?

b. Can I have more than one fleet map programmed in a single Bank ?

-If so, how do I enter them ? Just go thru the routine for the Bank
several times, for each different fleet map ?

-also, if so, any problems if I have one (or the several) fleet maps in
a single bank, together with conventional MOT II Non-fleet map stuff
?

c. Are the control channels freq's enough to enter, or must you have all the
other freq's also entered for fleet-map programming ?

Thanks,
B.

Soliloquy <Xns941254A7092FEinvalidinvalidcom@216.168.3.44>...

^ Pittsburgh, my city of residence, has deigned to use the
^ same tone on virtually all their 12 active police channels.

^ Was this very bright for the police radios to have been
^ configured so that the tones are identical on so many
^ frequencies, is there a reason for this?

It isn't un-bright. They probably did it that way out of convenience, or perhaps through local area coordination. In their application I can't see that using the same tone on all their frequencies would be a problem. Their radios aren't designed to receive a wide range of frequencies as your "wide-range radio receiver" is (I don't like the term scanner), so they probably don't have the trouble that you are. Their traffic is separated through frequency channelization so they probably use a CTCSS tone only to avoid confusion from distant stations on the same frequency and, perhaps, to make jamming slightly more difficult.

I use a BC-780XLT and an Icom R-7000 coupled together with a Stridesberg two port passive multicoupler.

This setup works well except the coupler sucks about 4 dB out of the signal.

Since many of my targets are already weak, I'm looking to replace the 4 dB.

Wonder if anyone has experience using the GRE 3001 preamp at LOW GAIN settings

I've seen all sorts of horror stories about pre-amps, and no one comments on the gain setting they used. I suspect many ran the things on the max 20dB setting.

All I want to do is overcome the losses in the coupler (without having to buy the 4 port active coupler as these things are pricey).

Comments anyone?

I use a GRE Preamp but only for a specialzed use, to receive MilSats using a Yagi cut just for that band. For this purpose it works great, even at 20 dB gain. However the same GRE Pre amp on a wide band ant (even with gain set to minimum) has caused me both FM overload and increased interference problems (and I'm not real near an transmitters).

So I do like the GRE Preamp but only when on an antenna which will only receive the band you're interested in.

I've been using Stridsburg multicouples for some time, however I only use the amplified modeles. They simply are GREAT! I have 2 of the 4 port versions and an 8 port version for VHF/UHF. Soon I'll be buying another VHF/UHF 8 port model as well as a 4 port HF model. But I always suggest spending the extra $$ and get the active version, you'll be happier in the long run.

As a side note, if you need to you can cascade two multicouplers together with no adverse effects. I do this often. Stridesburg has suggested not to cascade more than two units, I've only ever done two units and it works great, most of what I monitor are MilAir signals most of which are well over 100 - 200 miles away on UHF.

I am not a pilot, but as I've heard this 'term' in
use... 'coming in heavy' indicates a poorly navigated or
non-conventional approach (to a landing). For example,
an aircraft with malfunction of nav or landing gear. I've
not heard 'smooth'... but prolly indicates normal or 'not
heavy'.

If you are smart, you have a 406 Mhz EPIRB. One that is GPS equipped
will transmit you ID and location, and if GPS equipped, the signal is
relayed via Sat in Geo synch orbit. Alarms identifying the ID and
location withing a few meter go off in literally minutes. Beats the
hell out of CW.

If it isn't GPS equipped, it can take up to 90 minutes to get a
descent fix on the location (derived from doppler shift data from
orbiting sats).

Right...A guy on a 20 ft sailboat is going to buy a system that costs
more than his boat...Good grief....Get a grip.

How many people do you know with small private boats, that have the
normally COMMERCIALLY USED GMDSS system onboard? This is not a trick
question...You can take your time, if this hurts your brain.
Most people running 20 ft sailboats do not have the resources of
American Airlines, or a large shipping company. Also, in most cases, the
info you see on that airnav website will be estimated much of the time.
The only time the aircraft will be spitting out that info is if they
send it out via ACARS. And they don't do that every few minutes. That
and any radar transponder info from air traffic controllers. I receive
ACARS direct on my rig, so I'm familiar with how they operate, what they
send, and how often they usually spit out coordinates. It's really not
that often. Some hardly ever do...If a plane crashed, it's not going to
instantly show up on airnav software.
>

> Why do so many people want to throw all this technology away and force
> everyone to stay with antiquated forms of communication like HF and Morse
> Code?

There is no one throwing anything away. We have nothing to do with
commercial marine systems. I've never heard of a single ham that
suggests they should do away with their COMMERCIALLY used GMDSS system.
>
> What next? Will they start a movement to force all of us to get rid of our
> washing machines and have to use old washboards instead so THEY will be happy?

If we decided to change all commercial vessels back to 500kc morse, you
might have a point. But we aren't , so you don't.
>
> I for one, gladly embrace new technology that makes life easier and
> better.

Yea, I bet you will install all that stuff on a 20 ft sailboat. Real
soon...At O-clock I bet...
I use all the latest technology too, but that doesn't mean I'm dumping
all my older ones just to look stylish. The newer ones just add to the
ones I already have at my disposal.

Wanting to play around with HF and Morse Code for a hobby to get a
> nostalgic feeling of yesteryear is fine, but be realistic and don't come up
> with ridiculous ideas to force others to use it.

There is no one forcing anyone to do anything. Trying to compare
requirements for a commercial marine system to amateur radio is
ridiculous. You are the one that needs to get realistic. Why do you keep
trying to force this down everyones throat when it's not even a system
that private boats use with any regularity at all? As far as I know, the
"least" vessel required to use that system is one that carries over 12
passengers on *international* voyages. What do you suggest the people
with 20 ft sailboats, carrying 3 people on a short hop down the coast
use? This is not a trick question. Take your time.
>
> People who bowl or play golf don't force everyone else to do that either.
> Hams that use microphones don't tell morse code lovers they have to use
> microphones, so why can't the stubborn headed morse code loving hams just
> enjoy their hobbies without forcing everyone else in the world to do what THEY
> want to do.

How are we forcing anyone to do anything? We amateurs don't make the
rules #1.
Why do some seriously misguided people insist on telling me how I should
operate my radio station when handling emergency traffic to someone who
wouldn't ever be likely to have GMDSS gear at all?
Why on earth would you even care what mode I use. I don't tell you what
modes you should use. I could care less.
Like I said the other day, hell will be freezing over before I would
ever be likely to handle emergency traffic from a large commercial

vessel. I don't care what gear they use. Yea, maybe in 1912 when the titanic took a swim, but not now, or even when they still used the old system in recent years. You need to get a grip and quit confusing a commercial marine system with amateur radio.

All you seem to care about is being able to use a frigging microphone on the HF ham bands without taking that dog slow 5 wpm code test. What on earth does this have to do with commercial marine GMDSS systems? Crap, it only takes about two weeks to learn 5 wpm code. Maybe a month at the most for people like you who have a mental block. You can say anything you want, but to me, anyone that will not even attempt to pass that test is just plain lazy if they really want a ticket. And I have no problems with that either, until they start whining about it.
I bet I could teach code to the piano playing chickens at the "IQ Zoo" in Hot Springs AR. faster than you will ever get it. Why, because all you seem to want to do is whine about it. Truly pitiful if you ask me. Those chickens won't whine. All they will want is a small treat of food after they pass each letter. I had to learn stuff for the written tests that I will never use, but you don't see me whining about it. If the US drops code testing, fine. But they haven't yet, and whining about it will do you no good at all. The FCC could care less about whining no-code advocates.
MK

P.S I reposted this on my server cuz google crapped negative on me when I pulled the trigger. If it dupes, oh well...

George,

I'm not sure I see any difference between using the GRE for low gain,
or the Stridesberg active coupler for low gain.

Why would one cause problems and the other not (or is this not the
message you're trying to send).

Thanks for the notes on your gadgets. Sounds like a nice setup.

Good question which I'm not sure I know the answer to. However one thing I do know is that on the GRE the lowest possible gain is 10 dB where as the Stridesburg is only 4 dB. So there's a 6 dB difference.

Now I'll take a guess at another idea...I would say the Stridesburg is better built and better shielding. It has a heavy cast aluminum case were as the GRE has a much thinner case. Also the Stridesburg might have a lower noise figure.

Well, guys,

It appears, after a 36hr charge, operate, recharge, operate session, that the unit is as good as new.

I never would have thought that a corroded/dirty contact would have been the cause, what with years and years of good service from all sorts of radios with rechargable power supplies.

The toothbrush was very, very soft, btw, :)

Live and learn.

Thanks for all the help.

2136. Regency R1060 programming instructions?

Newsgroup: rec.radio.scanner
Date: 2003-10-13 15:47:39 UTC
From: Howard Paysen <hpaysen@frontiernet.net>
Message-ID: <vOzib.3624$BE6.2836@news02.roc.ny>
Source record: 25539

My wife picked up a Regency R1060 scanner at a garage sale for 25 cents. The scanner seems to receive well on the frequencies that are already programmed, but I have not been able to figure out how to program any new stuff into the scanner. I found a website that sells the manual for 6 dollars, but I'm too cheap to spend that much on a 25 cent radio.

I would appreciate an email with programming instructions or the URL for a website that would provide the information for free!

Depending on the Frequencies your local PD are on. If they have made the move to 800Mhz Digital or Trunked, you may just be better off buying a newer unit.

As for the Antenna, you can with fair results use a coupler that combines your existing AM/FM car antenna to your Scanner.

Do be sure to check into mobile use of scanners and the law first.

As for the frequencies used by the locals, check Google: "xxx city/town and police frequencies", also look into a Ham club that may be in your area.

FRS: Family Radio Serevice: a licnese free low power radio service, carved out of older Business Frequencies. Limited to low power units with fixed antennas. Best serve families in small areas and such. Frequencies are:

1..... 462.5625
2..... 462.5875
3..... 462.6125
4..... 462.6375
5..... 462.6625
6..... 462.6875
7..... 462.7125
8..... 467.5625
9..... 467.5875
10..... 467.6125
11..... 467.6375
12..... 467.6625
13..... 467.6875
14..... 467.7125

http://www.panix.com/~clay/scanning/frequencies/frs.shtml

GMRS: General Mobile Radio Service: a Licnesed Radio Service with more power and options. Licenses cost about $50.00 from the FCC, the license covers all family members. Formerly a Business Service, now only private licenses are issued, not sure if they have grandfathered older Business users though.

For Frequencies see:
http://www.gmrsweb.com/gmrstable.html

General Info:
http://www.gmrsweb.com/gmrsinter.html

The colors are often used to identify frequencies pre-set on business radios.

Mostly standard but not 100% of the time.

Some of the color frequencies are now MURS : Multi-Use Radio Service. MURS is also a license free service, limited to 5w with some limitations on what you can do.

Hope this helps.

An Airband Antenna mounted on your roof or high point will help.

Also, how far are you from the Airport?

Make sure you have the Tower Frequencies set.

That's not cool. It would be better not to use the scanner if you don't have headphones. In an open air environment like an air show it might be OK, but not when there are people trying to relax and enjoy their thoughts.

But I suppose you were only asking this question to advertise your web site anyway, or perhaps just to stir up some dust.

Frank

George,

Thanks for the additional comments. I was hoping the GRE could be
turned down lower than 10dB. I think the R-7000 can take a bit of
gain as it is pretty intermod resistant, but I have no such hopes for
the BC-780XLT.

Perhaps surgery on the amp is on order, or a lower supply voltage to
limit its output?.

No question, the Stridesberg construction is tight.

Thanks for the well said reply. I suspected that might be the case.

Do you know anything of Motorola Handhelds, I believe it's an HT-100?

Though it would be more capable, I believe, in listening to the
Pittsburgh Police, I would need to be assured that there was a Transmit
block available. I would not want to posses a radio that other could
inadvertently or intentionally JAM police calls. I suspect that there is
no block available, so I have avoided additional interest in the radio.
It is in the UHF range, originally very near the frequencies I need for
listening to the police. Also, it requires special programming software,
which I don't have.

Regards.

Where it is needed, and a simple marine channel 16 radio would not be good enough. Check into the rules and laws if you want a real good answer to this question.

Do you keep a horse in your garage in case your car fails? No one is going to carry around an HF radio with a code key in case the real radio fails. If anything, you would have an extra radio that would work on the same standard emergency channels.

Wow, what bullshit talk. It is the people who find code so easy to learn
that have the problems with the theory and technical stuff, so they can't design
or invent anything. And so many of the engineers that do design the
technology we use, are not allowed to operate hobby ham radios on certain
frequencies because they don't know morse code. Human society is a joke.

> Complex infrastructures should always be backed up by
> simple basic methods.

Yes, but talking into a microphone is the most simple basic method we have in
radio, using complex codes is what no one needs to know.

For the last time......

The military, police, fire, paramedics, etc. all do NOT learn or use morse code.

It has no use, even for back up or emergencies, or they would be using it.

> database (which is free at www.avweb.com)....

Agree there, George. I used the FCC web site to find out if a few call
signs used on an old TV show were in fact real.
They are and are still used, and the FCC web site returned very detailed
information about each one of them.

In Canada (for Canadian scanner hobbyists).

Industry Canada web site for frequency search (can be geographic by
frequency or call sign). Industy Canada is equivalent to the FCC in the
United States. There are a number of web sites in Canada that offer quick
access to Industry Canada's TAFL (Technical and Admistrative Frequency
List) frequency search:

(http://sd.ic.gc.ca/pls/eng_alpha/web_search.geographical_input) Is the
Industry Canada/Strategis frequency search page.
Very detailed selection of information. I use this once and awhile to 'strip
mine' frequencies (and used it to compile a frequency list for southwestern
B.C.) It is very detailed (and returns exact geographical information), but
the results can be reduced to eliminate the more detailed returned
information.

For lesser complications in searches, another web site
(http://neon.polkaroo.net/~darkwing/tafl/) can be used. It lists
in order Tx Rx, geographic location of the frequencies and the licensee.
It's pre-programmed to return results from
the TAFL web site, but only the four columns of data.

Canadian Aviation web site (http://www.canairradio.com/) lists aviation
related frequenices. Also has other avionic related
stuff.

No need to subscribe to something that can be accessed for free which is
paid for by the taxpayers.

Wouldn't spend $19.95 U.S. for a web site subscription to government
information that can be had for free if one takes the
time in doing spelunking.

Additional frequencies are available through local scanner web sites.

What I would like to see somewhere are downloadable scanned avation charts
(low flight topographical and high level vector flight lines) for North
America, something to take along on a flight. Airport aviation charts are
easily found.

Your milair resources are excellent, the refuelling tracks were fascinating
as McChord Air Force Base and Whidbey Island NAS are jsut down the road in
Western Washington.

He doesn't need one, the VHF channel 16 radio will be good enough for as far as he should ever be going out. And we don't feel sorry for stupid people who take stupid risks, so them dying is how nature weeds out the weak and stupid.

None of my friends with small private boats go out farther than the range of the channel 16 marine radios will cover. But yes, everyone I know does have a GPS system on board. My friends don't fool around and like to have the best of everything. If you can afford a boat, you can afford the fancy radios that go in it.

> Most people running 20 ft sailboats do not have the resources of
> American Airlines, or a large shipping company.

And we don't have this stuff on our bicycles either, because it is not needed. But if you are going to be in THE MIDDLE OF THE OCEAN, then yes, they ALL have this stuff.

> The only time the aircraft will be spitting out that info is if they

They ALL do it. The only flights that turned it off, were the ones on 9/11 that were taken off line to purposely avoid detection. This is a requirement, not a choice.

> > Why do so many people want to throw all this technology away and force

Or decided to make all ham operators in the year 2003 learn Morse Code before they are allowed to use a microphone.

> But we aren't ,

SURE you are.

> > I for one, gladly embrace new technology that makes life easier and
> > better.
>
> Yea, I bet you will install all that stuff on a 20 ft sailboat.

No, just as you don't see any HF radios with code keys installed on them either.

You don't have a gas gauge on your bicycle either like on your car do you?

Be realistic. Row boats and canoes don't need this stuff.

> I use all the latest technology too, but that doesn't mean I'm dumping
> all my older ones just to look stylish.

Oh, then you DO have a washboard around and a horse in the garage.

Hey Jeff, there is no one forcing anyone to do ANYTHING, get it through your extremely thick skull. If you want the ticket, you learn the code. If you don't want the ticket then so be it. But NO ONE is FORCING ANYONE to learn the code.

>private and commercial? I seriously doubt that.
It is legal requirement on all commercial vessels. In fact all
commercial vessels require a class I device, which means it will
deploy itself if the vessel goes down. Most Aircraft rafts also now
have them.

In pleasure craft, you are supposed to have one once you get to a size
that can get out of sight of land. The major advantage of these
systems is you don't have to know your position. The SARSAT system can
find you to within about 10km if you GMDSS isn't GPS equipped. If it
is GPS equipped, your position is transmitted along with the distress
call and your ID, and those signals are picked up by Geo Synchronous
sats as well as SARSAT birds, so the time from deployment to raising
the alarm world wide is on the order of 5 minutes. It is all
automatic. If you don't have GPS, it may take several SARSAT bird
passes to get a good fix. The 10Km number is plenty good enough, since
the 406Mhz GMDSS buoy also transmits a low power 121.5Mhz beacon to
home on. Obviously with GPS, there isn't much homing to be done. You
have a position that is probably good to about 10 meters.

Recently it became legal for GMDSS devices to be used other then at
sea. We now carry on Pains Wessex Fast Find Plus on a light aircraft.
Weighs about a pound, can be carried around your neck, and costs about
$900.

The bad news is these things are relatively pricey. Figure about $600
for a Class I without GPS, and about $900 with GPS, Class II, which
are not self deploying are a little less expensive. That about 4 times
what a 121.5Mhz device costs, but when you compare the capabilities,
it is worth every penny of it.
>
>> Satellites and GPS are far more reliable than HF.
AMEN. BTW, the 406Mhz transmitter in a GMDSS operates at 5 watts, and
406Mhz is not allocated to any other service, so it is 'clear
channel'.

Keep in mind code

Is it possible to listen in on the coach - quarterback radio? If so, anyone got freqs?

thanks for the reply, I ordered a coupler from grove, What would anyone
recommend as far a new scanner that's handheld. thanks

Another question would be...

what exactly is the Motorola radio set that the coach wears used for (other
than for advertising Motorola)?

The quarterback has radio contact with the coach? On a 100 yard football
field?
Figure that the quarterback has better things on his mind than saying into a
radio in a learned communications tone..

"Roger. In position to advance one zero yards downrange.
Initiating offensive sequence delta two. Acknowledge time remaining is zero
one four six. Downs one."

I can see radio contact with Nascar races, but football players?

That's a possiblity. However now I would start thinking of cost. When you add an attenuator, GRE pre-amp, and non amplified Stridberg you might be just as costly as buying the amplified version and not have the extra hassles....

Also remember the GRE preamp probably has a higher noise figure than the amplified version of the Stridsberg.

Pretty secure, for obvious reasons.
>
> Another question would be...
>
> what exactly is the Motorola radio set that the coach wears used for (other
> than for advertising Motorola)?

Talking/listening to the coaches box.
>

> The quarterback has radio contact with the coach?

First, there's No talk-back. On Some teams, the person
talking to the quarterback is on the sideline (often the
second-string QB), but I don't think any of the teams have
the head coach do it. If it isn't done on the field, it's
from the coach's box.

>
> I can see radio contact with Nascar races, but football players?
Prevents communications breakdown.

Well, not that I myself ever actually did it ;), but most of the time,
both sides were heard. I've been told that sometimes only one side could
be heard, then when it would switch to a new cell and jump freqs, both
sides could be heard, and vice versa.

More weird.

But can see a bit of value in that, since the coach's box is way up there in
the same structure as the press box is.

Never see that in a NHL hockey game. The coach is spending a lot of time
yellin' profanities at the team players who aren't
producing.

But see that same thing in Canadian football (radio headsets), but most
often you see the coach yellin' profanties at the team players who missed an
opportunity to do a scoring drive after taking off from the 55 yard line on
a long pass, on the 3rd and final down.

I was expecting you to say something like that.

And we don't feel sorry for stupid people who take
> stupid risks, so them dying is how nature weeds out the weak and stupid.

Well, don't then. We won't feel sorry about you whining about the code
test's every day.

>
> > > Satellites and GPS are far more reliable than HF.

GPS??? Who talks on a GPS? And no, not all satellites are more
reliable than hf.
Not all satellites are in geosync orbits. But, I can see someone using
sat's on a boat at times. But I sure wouldn't want to rely on one in
an emergency. The only sat's I can use are amateur sats. I'd be better
off on HF.

Keep in mind code was
> > > invented and used because there were no microphones invented yet.

You sound like a broken freaking record...Polly want a code test?
Polly want a code test? Swqaaaaawwwwwkkkkkkkk!

>
> None of my friends with small private boats go out farther than the range of the

> channel 16 marine radios will cover.

I rest my case. Who cares about a radio that will be lucky to do 80 miles at best.."the only reason I give it that much credit is because of the water you would be floating over" None of your friends with small private boats go out farther than the range of a VHF radio, probably because they are a bunch of chickenshit code weasels. I know people that LIVE on sailboats. And they aren't afraid to use them. And they have BOTH VHF marine AND amateur radio. GPS too.

But yes, everyone I know does have a GPS
> system on board.

So what? Many people I know have a GPS in the car. So what? What good is a GPS, except for telling you where you are? You are ducking behind tepid horsecrap now....

My friends don't fool around and like to have the best of
> everything.

I bet...What does this have to do with the GMDSS system you have touted for the past few days as the best thing since sliced bread? Are you telling me they have this gear, or are you just spouting more B.S.? A simple GPS doesn't qualify.

If you can afford a boat, you can afford the fancy radios that go in
> it.

Right...If you can afford to whine about the code for days on end, you can afford to spend two weeks learning it, if you want a ticket. But I guess you really don't want one that bad. If you are not lazy, then you are admitting to me that you surely must have total shit for brains. I bet you have to tie a red blinking light to your car antenna just to find it in a deserted K-mart parking lot. I've worked 7 year old girls on the air that have more on the ball than you do. And that ain't no crap either. I actually have worked 5-6-7 year olds on the air that passed that code test. And they were working CW on the air, not using a mike. And not a whiner in the pack. If I were you, I'd be ashamed.

>

>
> And we don't have this stuff on our bicycles either, because it is not needed.
> But if you are going to be in THE MIDDLE OF THE OCEAN, then yes, they ALL have this
> stuff.

Again, you are full of crap. Trying to back peddle your way out of your mess now huh? And who said anything about the MIDDLE of the ocean. But no, if you are in the middle of the ocean with a private vessel that carries less than 12 people, and you are not taking an international trip, you don't have to have that stuff.

>
> > The only time the aircraft will be spitting out that info is if they
>

> choice.

Nearly all larger aircraft have transponders going, but that doesn't
mean those internet airnav programs are updated instantly. There is
quite a lag involved, in which time, the data you see is estimated.
>

> > might have a point.

But like I said, we haven't , so you don't....
>
> Or decided to make all ham operators in the year 2003 learn Morse Code before they
> are allowed to use a microphone.

They decided this many, many years ago. Hell, you code whiners are
lucky they dropped the test down to snail speed, even for extra class.
But you all still whine like a bunch of lazy ass 7 year old children
even after that.
>
>
>
> > > I for one, gladly embrace new technology that makes life easier and
> > > better.
> >
> > Yea, I bet you will install all that stuff on a 20 ft sailboat.
>
> No, just as you don't see any HF radios with code keys installed on them either.

I rest my case again. Whupped your ass on that one, huh?
>
> You don't have a gas gauge on your bicycle either like on your car do you?

I don't ride a bicycle.
>
> Be realistic. Row boats and canoes don't need this stuff.

Who said anything about row boats and canoes? What other horsecrap are
you going to come up with? I ride canoes and kayaks down rivers. Some
ride them on the ocean, but I'm not going to try to tell them how to
run their boats. I know one thing, they would be lucky to fit all that
GMDSS gear in the canoe, and still have room to sit.

>
> > I use all the latest technology too, but that doesn't mean I'm dumping
> > all my older ones just to look stylish.
>
> Oh, then you DO have a washboard around and a horse in the garage.

No, but I still use CW. Never have had a washboard or a horse. I have
watched bonanza though.

>
> > The newer ones just add to the
> > ones I already have at my disposal.
>
> Interesting. I don't use coal to heat my home.

That makes a lot of sense... I'm starting to think you ARE a 7 year
old girl...
I guess the use of coal to make electricity would strike you as silly
too, huh?
Too damn old fashioned to possibly be of any use at all....I guess we
should just cut your power off...Being you are so damn high tech,
surely you can whip up a mini nuclear power plant real fast.

> > There is no one forcing anyone to do anything.

>
> Oh yes there is. People who want to use microphones on HF are being FORCED to

> taking the test.

OK, the FCC forces you to take a code test...Who cares? I'm glad. You
need to take a code test. Will make a man out of you.
>
> > Trying to compare
> > requirements for a commercial marine system to amateur radio is
> > ridiculous.
>
> I wasn't the one comparing HF morse code use on a commercial marine system. LOL!

Right, you are about a stupid dipshit aren't you....You been doing
that for the last 5 days. BTW, you paragraph doesn't really make
sense. You should have said:
I wasn't the one comparing HF morse code TO a commercial marine
system.
And if you say that you haven't been, you are plain full of it. I am
on google you know. I see ALL posts. Want me to refresh your memory?
>
> > You are the one that needs to get realistic.

> ROLFFL!

.-. --- .-.. ..-. ..-. .-.. ! so there...na-na-na-na-naaa-naaa

>
> > > People who bowl or play golf don't force everyone else to do that either.
> > > Hams that use microphones don't tell morse code lovers they have to use
> > > microphones, so why can't the stubborn headed morse code loving hams just
> > > enjoy their hobbies without forcing everyone else in the world to do what THEY
> > > want to do.

Again, no one is trying to do anything, you twit. If that were the
case, I and all of us stubborn headed morse code lovers would be on
the horn to the FCC every day badgering them to keep useless wankers
like you off the air. What makes you think *we* have anything to do
with this? The last time I was at an FCC office was when I took my
general. "13 wpm, which I passed 100% by the way. Eat yer heart out!

The only reason I comment about this is because you make me sick to my
stomach with all your petty ass code whining and I like to slap you
around. More fun than watching "the no-spin zone" I think someone
surely must have porked you in the ass when you were a child. Either
that, or you got your pecker caught in a box fan and was changed
overnight to a whining little girl. So damn sad...:/ MK

Soliloquy <Xns9413B88322708invalidinvalidcom@216.168.3.44>...

^ Do you know anything of Motorola Handhelds, I believe it's
^ an HT-100?

The only Motorola I'm familiar with is the Motorola Saber. The software permitted a great deal of control over assignments to each channel, including the PL, power output, squelch level, etc. With the Saber you would be able to assign the lowest power level to the channels you didn't want to transmit on. I'm not certain I remember correctly (it's been 10 years) but it might also permit assigning receive-only channels.

If the HT-100 is newer than the Saber it might have those abilities plus more.

The Saber also required a programming interface, which consisted of a black box with a switch on top, a lead to the computer's RS232 port and another to the radio, and electronic components and a 9VDC battery inside.

Since I already have the passive Stridesberg, and the GRE is only $40,
I'll go for the GRE and add a tee network pad to tame it to the min
gain I want, e.g. if the GRE min gain is 10 db as stated herein and I
need 4db to make up for the coupler losses, then I'll add a 6-7 db pad
to the output of the GRE to do the job.

I suspect the BC-780xlt may howl on certain freqs but the R-7000 will
be OK. That thing is bullet proof.

Mint condition BC780XLT scanner. Complete with box, docs,
manual & warranty card. Unit is about 1 year old and is a 10
electrically, a 9.95 cosmetically. Box is a little bit tattered.

When purchased, a discriminator tap was installed by a local
radio shop. Output is to a gold RCA chassis mount connector
at the rear. Works perfect for decoding pagers, digital signals
and Police Mobile Data Terminals (MDT's)....

Will ship FREE via USPS Priority mail to the north american
continent. Purchasers in hawaii or europe will be charged $15.

Payment is by USPS money order ONLY, please!

Asking $275 but will take best offer.......

Reply here or via e-mail (kg0wx at comcast dot net)

I reviewed a GRE Super Amplifier in
April 2003 Monitoring Times. It is the smaller model,
designed for use with portable scanners.

The GRE Super Amplifier I tested (s/n 93156349) is
best suited for improving the performance of insensitive
scanners and test equipment when used with an inefficient antenna.
You may experience intermod if there are strong signals in your area.

That is not expensive at all. When you buy a car, the dealer wants around this price if you want the good stock radio. When buying a car, this ad on price is nothing. When people have enough money to buy boats, this ad on price for the accessory is even less of a big deal.

It's to bad you don't have enough money to be able to learn the Morse code Jeff! LOL

Yes, facts are what everyone expects to come out of my mouth. No one should ever go out with such a small craft to the point that he can't see land anymore. Anyone who takes stupid risks, we don't feel sorry for. Even if you are drifting out too far, be sure to call back to land while you can still see it. Not a problem.

> > > > Satellites and GPS are far more reliable than HF.
>
> GPS??? Who talks on a GPS?

It does the talking for you. In ham radio we use it all the time in our cars so on trips our friends can see exactly where we are with APRS. It is all automatic.

> And no, not all satellites are more
> reliable than hf.

That's how the news networks get to us live from Iraq during a war. They come in fine, with VIDEO to boot! But when I try to get one of the powerhouse broadcast shortwave stations on HF from the same part of the world, it comes in like crap most of the time, and the few times it comes in good, well that is expected considering the output power and antenna arrays they are using. No such huge antenna systems or power is used by the press trying to hide with troops that don't want the enemy to know where they are.

> Keep in mind code was
> > > > invented and used because there were no microphones invented yet.

> miles at best..

It has nothing to do with the radio, but the size of the BOAT! If you are going out far enough that you don't see land, you would be on a commercial ship that then would also have commercial radio equipment as required.

Plus, keep in mind everyone I know only uses frequencies that are being monitored, so no point in using radios or frequencies that are not being listened to by the coast guard unless someone is like you.

> "the only reason I give it that much credit is because

Better to be cautious, safe and alive, than an idiot risk taker who dies because he is so brave.

Intelligence is what keeps most of us alive longer.

> I know
> people that LIVE on sailboats. And they aren't afraid to use them. And
> they have BOTH VHF marine AND amateur radio. GPS too.

You better believe they have VHF marine radios! Ham radio is great to have to pass the time, just as books and other games are, but what does the entertainment have to do with this? I am sure they have chairs aboard too.

> So what? Many people I know have a GPS in the car. So what? What good

>
> Right...If you can afford to whine about the code for days on end, you
> can afford to spend two weeks learning it, if you want a ticket.

The point just keeps flying over your head. What if someone kept saying to you, if you want a driver's license, you have to learn Egyptian Hieroglyphics first?

I bet you would be whining too, and I would love to see you ask what learning that has to do with getting a driver's license and then someone comes back at YOU with: "Stop

whining, you want to drive a car, learn Egyptian Hieroglyphics."

No point to go on with anything else. You need to understand THIS concept FIRST before anything else. :)

That doesn't make any sense as a reply to what it is replying to, but oh well.

> Only to be able to recognise it and
> prove as much by copying at a ridiculuosly low speed than even a
> 5-yr-old can easily master in a short time.

Actually the lowering of the speed has NOTHING to do with it. If you ARE going to learn the code, it makes more sense to learn it at the fastest speed right away. If you learn it at 5 wpm, it makes it much harder later to go faster with it.

Lowering the speed to 5 wpm was idiotic. As if that made it easier or something. Ever hear of the Farnsworth system? Learning the code is like learning a language, you hear the musical sounds of the letters and words, slowing it down only makes it harder.

And many 5 year olds also get their extra license in one testing session. Yet many who are yelling at people to learn the code, don't have their extra licenses, so they are hypocrites. Hypocrites that can learn the code easy, but don't have the brains to figure out common sense questions on the written part that you don't even need to study for to pass, you should know all that stuff before you even set up a CB radio system.

It is proven that there are those people who can master the code without any problem and yet can't seem to pass the written tests, and those that master the written tests never having studied but can't seem to learn the code. It is also proven that the later type of person is the more intelligent one too. Many an engineer don't have HF ham licenses because of the code, and they have more knowledge and experience in radio than many hams who have no right playing with what they are playing with as they only memorized answers and cause all sorts of problems.

Then you have those that could master the written part AND learn the code. :)
We in this class are even more intelligent and realize how stupid the code requirement is today. We also have the curiosity to want to know why it ever WAS a requirement in the first place.

It DID have a purpose back when Ham operators were considered a reserve during war when the military needed people to be able to decode their morse code messages and relay the messages. But since the military no longer uses code at all, this requirement has no purpose today.

But many idiots out there think that the code requirement is just something to make it harder to get a license! As if the laws were made just to keep a large group of people from being hams and helping out their country during emergencies and to keep the pool of public service radio people smaller than it could be. Some think it is to keep CB people from getting a license. Ridiculous.

But with that insane thinking, when talk of removing the code requirement comes up, they want to know what you will replace the code with so that getting the license is still hard to get.

These people have no clue at all. These are the same morons that vote for Republicans and Democrats thinking there is really a difference between the two, and continue to vote for them no matter how many times their taxes are raised, and laws are passed taking away their rights and freedoms.

Think of it this way. The test you take to get your driver's license is not to make it harder for people to get a license, it is because you need to know those things before you are allowed to be on the road with the rest of us. If you like to ride horses as a hobby, that is fine, but you are not required to be tested on riding horses to get a license to drive a car.

And let's say, that all of us had to learn what to do when you see a flashing yellow light, and then one day, the government bans the use of any flashing yellow lights for some reason. Do we still make everyone learn what to do when they come up to a yellow flashing light if that situation is NEVER going to occur and they don't need to know this anymore? Of course not, but then there will be those that think we have to replace that part of the test with something else, so that it is not too easy to get a driver's license, right? Idiots.

The original REASON for having the code requirement is no longer, since the military doesn't use it any more. Thus.... No reason to force people to learn it anymore.

Common sense folks! But it is fun to see all those that don't have the brains to realize this. It amazes me also, how many people that are for keeping the code requirement don't even KNOW why it was a requirement in the first place. That just REALLY is outrageous. And it is 100% of them that don't know, because if they DID know, they couldn't possible be for keeping the requirement.

> The proper analogy would be that of "only requiring that you can
> recognise and know (in a most basic manner) how to use a washboard.
> There would be *no* requirement to actually use one at all.

Ok, agreed. But it is still a stupid requirement! (funny how you didn't see that!) Why should anyone be tested on if they know how to use a washboard before they are allowed to use a washing machine??????

Likewise... Why should one be tested and required to know morse code before being allowed to talk into a microphone on HF??

They DON'T. The world has finally realized this and made the decision this year! Other countries have already dropped the requirement that they ONLY kept this long because of international agreement. Now that there is no international agreement, the US keeping it would be ridiculous. Especially since ham operators were essential during 9/11, and since we can expect many more such attacks, thanks to Bush, it is in

the US' best interest to open the doors to as many of those that wish to volunteer their time and services with ham radio, rather than keep many qualified people out of it because they don't want to learn something they never intend to use. They just want to help serve their country.

Keeping the code requirement, is sort of like "letting the terrorists win" !

I think any terrorist would agree that keeping the code requirement and having less hams to help during the next retaliation attack of theirs, is something THEY would all like to see.

If you are for the code requirement, you are no different than the terrorists.

Think about it.

Then go and learn Egyptian Hieroglyphics. Don't be lazy!

This whole argument is pointless. The code requirement will be eliminated. No thinking person would dispute that. The only reason we still have it now is international agreement. I firmly believe that if people feel that a code requirement is necessary (and not enough do to keep it a requirement anyway) that they should go ahead and require it. About 1 word per lifetime should do it.

Greetings to all, please have a look, if it interests you to take part in an experiment with Electric Thruster Ion Plasma Engine tests onboard the Space Station.
The engine causes a VHF radio blackout on Earth and your help is need as part of ground receiving network to map the extent of the effect.
Please go to
http://www.qsl.net/vk3ukf/etshoadowozindexqsl.html

There are links to more information at the Russian site.
You don't have to be an amateur radio operator, schools and S.W.L.'s are also welcome.
Cheers, Kevin VK3UKF

Actually Jeff, you don't get the point.

When you get the license for HF amateur operation, you get privileges that include code. Code proficiency is part of the requirement. Code does happen to represent a significant part of HF operation.

It has nothing to do with Egyptian Hieroglyphics, boating, GPS, driving, etc.

It has to do with demonstrating you know what you are doing in areas that are pertinent to the license.

You would think so, wouldn't you? Yet this thread proves that people are either not thinking, or their way of thinking makes no fucking sense.

(Since the FCC says you can now use the word "fucking" on radio and TV, then we can now use it on newsgroups too.)

> The only reason we still have it now
> is international agreement.

And that finally is now gone. So the real reason we have it now in the US when other countries got their act in gear and already eliminated it, is that in the US government moves really slow unless it is something unimportant like renaming french fries to freedom fries, that they can move really fast on legislating.

> I firmly believe that if people feel that a code
> requirement is necessary, that they should go ahead and require it.

Right, those that want to learn the code should by all means learn it. Those that want to use microphones and don't like to use code, don't have to learn it.

But what about affirmative action? Since people who didn't want to use code had to learn it all this time, perhaps now the government should make those that want to use code to learn something else they don't like before they can get licenses now. You know, just like the reverse discrimination and racism of affirmative action to make up for the past mistakes.

I say if you want to use morse code on HF, you have to learn and be tested on Egyptian Hieroglyphics.

Crap, why the hell can't any of you just concentrate and deal with that point before you avoid it and jump to something else???

> When you get the license for HF amateur operation, you get privileges that
> include code.

No, you have the privileges to use code on VHF and UHF if you want to and don't ever have to pass a code test. In case you are not aware, parts of those bands are set aside for code as well.

> Code proficiency is part of the requirement.

It was part of the requirement to get a technician's class license too, wasn't it? But that was dropped, right? It would have been dropped all across the board for every class of license, but the international agreement between countries was the ONLY reason it had to stay with the HF licenses. Now that the world finally got to vote on this, they did away with the requirement. The requirement is NO LONGER. Other countries were quick to remove the requirement from their local laws, the US is just very slow at changing laws. It will happen, it just takes a government like ours months of boring useless discussion to come to an obvious conclusion. Have you ever watched C-span? Then you would know how fucked up our government is.

> Code does happen
> to represent a significant part of HF operation.

So does voice.

> It has to do with demonstrating you know what you are doing in areas that
> are pertinent to the license.

"Knowing what you are doing" is a technical reasoning since you are dealing with equipment that can cause interference and even death if not used properly. Not knowing how to send morse code properly is not going to interfere with any other licensed services or cause anyone to die.

Now, try to answer this without avoiding it....

What if to get a driver's license, you had to learn Egyptian Hieroglyphics first?

Bottom line, it's too bad the trend is toward dropping the requirement.

Until now, the morse code requirement served the dual purpose as a de facto "intelligence test" to get in to ham radio, and it also required some committment (which in turn gets hams to respect the medium).

What I think worries everyone is that without this requirement, the bar will be lowered to the extent of becoming glorified Citizens Band radio.

And that would be a shame.

Nope, it doesn't. If that were the case, I would be in the same speed
league as you.
If you are going to take a 20 wpm test, and ditch the code upon
passing the test, it might make sense, but to someone that intends to
actually use the code, it does not. You would be a "one speed wonder"
. The first person that came along at 9 wpm would cause you to vapor
lock. I started at -5 wpm and went up.
Quickly. It sure didn't seem to hurt me, being I peaked at my limits
of "clean" manual "paddle" keying. My abilty to send cleanly using a
paddle determined my real world limit. Not my abilty to receive. I
can't send cleanly with a paddle over about 55-60 wpm and thats
pushing it to the edge. After that I get too sloppy for my tastes.
Being I refuse to use a keyboard, which I hate, that was my limit. If
I used the keyboard, I probably could have eventually hit 70-75-80
wpm. The dots are so fast at those speeds, even at 60, that you don't
really listen for individual dots. You gauge from the length in ms of
the string. It's almost a blur. To be a decent CW operator, you must
gradually work through all the speeds. Your theory does not hold
water. But to be expected from someone who doesn't work cw.
>
> Lowering the speed to 5 wpm was idiotic. As if that made it easier or
> something.

Well, being many upgraded to extra in one fell swoop after they
dropped speed, it must have made some difference if the rest couldn't
get 13 or 20 wpm. Of course, I suspect the vast majority of those
didn't really practice enough.

> Ever hear of the Farnsworth system?

Duh...

Learning the code is like
> learning a language, you hear the musical sounds of the letters and words, slowing it
> down only makes it harder.

Slowing it down only makes it harder to keep track of previously sent
letters, if head copying. That makes it harder to make words out of
the copy. You have to copy behind a bit. But slowing it down does not

make it harder to copy the characters. Trust me, for a rank beginner, it's easier to learn and pass 5 wpm, than it is to learn and pass 20 wpm. That is, unless they alter the proper timing, and leave huge gaps between letters on the test. And thats not 20 wpm any more. The farnsworth method teaches incorrect character spacing, and overall lousy timing. You learn lousy timing from day one, and that is no way to live. Not what I consider good. An *actual* 20 wpm at normal spacing will cause a beginner to vapor lock when they test, if they learned with the improperly spaced farnsworth method. The Farnsworth method is NOT a good method to use for people that intend to use the code in the real world. MK

I find my self in agreement with you Stinger. The worth of anything in life is only how hard was it to obtain?

Why would anyone buy a Rolex when a Timex does the exact same thing an order of magnitude cheaper? The Rolex is a sign of achievement by the wearer.

Those of us who worked to learn the code hate to see our Rolex turned in to a Timex by a group of people who can't afford a Rolex.

I guess in a world where achievement is disdained, because it makes the under-achiever feel bad, the move is not unexpected.

It doesn't really bother me. The only bummer part is there will be
fewer and fewer CW ops in the next years. I could really care less if
they drop the code tests. With 5 wpm, for all practical purposes, they
already have. I just can't stand the whiners...Whine, whine,
whine....Such a waste of energy, particularly being they are wasting
it in the totally wrong direction. They should tell it to the fcc, not
other hams, or SWL's on NG's. It's like whining about the broken
cruise control in your Ford truck at a J.C. Penny's. :/
We don't have any control over it, so whining to us is a total waste
of time.
It makes me laugh that someone would spend so much time and energy
trying to convince people that have absolutely no control over the
matter. Better than the freaking comedy channel if you ask me.

amateur radio is going to survive if the gatekeepers continue to limit
access to those who can prove a working knowlege of morse code. The
code was at one time one of several useful tools for communicating,
but it has been outpaced by other faster technologies that are easier
to learn. Military and commercial use of the code has all but ceased.
So who's left - HAM's.

Is there a need for HAM's to use the code in emergency situations?
Posssibly, but I haven't heard of any recent successes. Several years
ago I tried to listen in on a logjam of ham's trying to run an H&W net
after one particularly nasty carribean hurricane. It was a babble of
voice and code - everyone running over one another. Sorting out the
multiple code transmissions was all but impossible. I truly think
managment of emergency communications is best left to the
professionals with up-to-date tools.

Should amateur radio licenses be subject to passing a test?
Absolutely. However the test should require knowlege of skills that
are appropriate for todays world. Knowlege of radio technology and
electronics are an absolute must for safe operation of poetntially
lethal equipment. Proficiency in communicating by voice and one or
more digital modes on several bands should be a requirement. The
Morse code should not be one of those required digital skills however,
because it has little useful application in todays world.

The gatekeepers of the hobby should be looking for ways to reduce the
average age of the licensed ham by enticing new entrants into the
hobby. Requiring them to learn a technology that is slower than a
78rpm record played at 33rpm is not the way.

> I find my self in agreement with you Stinger. The worth of anything in life
> is only how hard was it to obtain?

Before you make such a statement, be sure to test it out by thinking first if there are any examples that blow holes through the theory as so many do.

Many people would put a high value on their children, even though they were so easy to obtain, many were not even planned for. I put a high value on what I get just from sitting and doing nothing in the middle of nature, and is one of the easiest things to obtain. In fact, with many things, once the way of obtaining something is not worth the reward, no one bothers to put more effort in to something than they can get out of it. For instance, we know this is how MOST people felt about the code requirement as no one was getting licenses anymore, then when the requirement was dropped for the tech class license over a decade ago, there was a flood of new licenses, so many the FCC had a hard time keeping up with it and it took months for some to get their licenses. That is all the proof you need to prove that point.

Watch again as soon as the US finally follows the other countries in officially dropping the code from their local wording the flood of applicants upgrading from Technician class directly to Extra Class in one sitting, while the code passing Generals STILL won't be able to get THEIR Extra class licenses because they can't pass the easy written multiple choice tests.

> Why would anyone buy a Rolex when a Timex does the exact same thing an order
> of magnitude cheaper?

Because those people don't buy a watch so they know what time it is, they buy it to SHOW OFF and try to impress other people. Are you saying this is what people who learn the code are doing?

Only an idiot pays the price of a car for a watch, when you can get a great one for under $100. If you really like the Rolex style, you can even get an exact copy for around $20 that is self winding and never needs batteries and keeps excellent time.

The real question is, what kind of IDIOT spends thousands on a real Rolex when everyone is going to think it is just a fake $20 one anyway?

I don't need the real one OR the fake one, my digital watch provides so much more information, like phone numbers, reminders, and all sorts of things the Rolexes can't do and for much less money. Intelligent people have a knack for reasoning things out and using common sense, something anyone who buys a Rolex is not doing. They are just throwing away a lot of money that could have been used for much better purposes.

> The Rolex is a sign of achievement by the wearer.

Well, we know what category YOU fit in now. :)

> Those of us who worked to learn the code hate to see our Rolex turned in to
> a Timex by a group of people who can't afford a Rolex.

What a shit poor analogy. How does someone else not learning code make your code learning and use of it, any less in value? See, again you are only concerned with OTHER people and not your OWN use for the code and the enjoyment you may have had learning it. Nothing is going to take that away. If I produce and build a beautiful radio with my own hands, and no one else has to build one, that doesn't take away the value of my radio to me at all.

"by a group of people who CAN'T AFFORD a Rolex"

This quote AGAIN shows us what type of person you are. Those that don't have rich parents like you must of had are not worth anything in life to you. We need high prices and morse code restrictions so that we can keep most of the public out of our exclusive clubs of elite snobs. God forbid that a commoner should be allowed into our hobby that didn't have to go through the "eating live goldfish" stunts first to be initiated into the jackass club at your high cost club.

Again, there are many watches that do an exceptional job of keeping time for much less money, and those that foolishly waste and throw away money based on expensive name brands are idiots with no intelligence. People don't buy Bose speakers because they are good, Bose speakers SUCK! People buy them so when others LOOK at them, they will know how much money they spent (and what boobs they are that they don't know how shitty they sound and could have gotten much better speakers for much less money! :)

> I guess in a world where achievement is disdained, because it makes the
> under-achiever feel bad, the move is not unexpected.

In the old days, you didn't need to get a license to ride a horse. We didn't make licenses for cars to keep most of the public from driving a car, or pad it with worthless extra tests so that most could not pass it, but on the contrary, we make it easier for everyone (now even illegal alien criminals) to get a driver's license because the test is just so you know the rules of the road, not how to use morse code or something that you will never even use when driving. There would be no test at ALL for a driver's license if not for a few things you really do need to know before getting behind the wheel.

The same thing applies to ham radio.

If not for the fact that ham operators are allowed to build their own equipment and can use transmitters that are over Part 15 rules regarding output power and whatnot, there would be NO test at all!!! There is no test for CB, family service radios, or even GMRS!! Yes you need a license for GMRS, but there is no written OR code test, just send away for the license! Why? Because those people are only going to be using FCC approved equipment instead of playing around with making their own or using power outputs that are as high as what hams can use.

We only need be tested on the dangers of the power we are playing with, and how to safeguard from interfering with other licensed services, and how not to kill birds and other life with our dangerous equipment.

Otherwise, it would just be sending in a check and getting your ham license like with GMRS.

Not knowing code doesn't seem to have anything to do with operating CB, FRS, or GMRS and it doesn't have anything to do with being able to use ham radio either.

Ham radio can be used for remote control model aircraft, sending computer data, sending VIDEO pictures, and so many things that we are not tested on before getting the license. Once we have the license, if we are interested in learning one of the many areas of ham radio like using morse code, or using RC planes, we will learn them as we use them.

No sense in testing EVERYONE in RC planes and Morse Code just to get the license, only the RULES and SAFETY need to be learned, the fun and games that have nothing to do with the dangers of operating RF need not be a requirement before the license is issued.

You can use a morse code key incorrectly, and you won't kill anyone or cause any interference that using the code key properly wouldn't have done. But the transmitter you are using the code key with, you need to know a few things about that before turning it on and using it!

We don't get tested before getting a driver's license on how to use the car to go out in the country for a picnic, or use it at a drive in movie, just the important SAFETY and RULES that go along with operating the vehicle which can be dangerous if not used properly.

If there was no danger in operating a car, there would be no test, you would just pay the fee for your license. The testing is not to make it harder for people to get a driver's license!! The economy would crumble and people would not be able to get to work if there was a morse code requirement before you could get a driver's license!!

And right now, in the time we can expect many more terrorist attacks on our soil (thanks to Bush) we need as many ham operators to assist in those times as they did during 9/11. The MORE hams the better! Silly worthless restrictions to keep qualified hams from helping is doing nothing more than HELPING THE TERRORISTS!!

Ask any terrorist that hate the US and I am sure they will be for keeping the code requirement too!
They don't want a surplus of hams being able to provide communications and aiding what they are trying to take down.

The other countries are already on the ball and have dropped the code requirement, but the one country that should have been the first to do so, really seems to like endangering our lives. If not, they wouldn't keep terrorizing the middle east and getting them to retaliate on us so much.

> It doesn't really bother me. The only bummer part is there will be
> fewer and fewer CW ops in the next years.

Not once the code requirement is dropped. You will see the opposite, MORE CW will be on the bands. Why? Because when you force someone to learn something, it is not an enjoyable memory or experience and you avoid it after you don't have to do it anymore. That is just human nature. How many kids forced to learn an instrument go on to play and enjoy it during adult life? Not many. But those kids that picked up a guitar and learned it because they wanted to, ended up playing it through adulthood.

As soon as the code requirement is dropped in the US as it has already been done in other countries, we will see a giant wave of people upgrading to HF bands as well as people becoming hams for the first time and not having to stop after the tech class test but go straight on to Extra as many electronics engineers will be doing.

Now what happens next? They are all on the HF bands trying it out, and find that a certain part of the band is reserved for morse code (as is the way it should be, no one is advocating banning morse code, just not forcing it as a requirement) and their curiosity will grow and many will want to get in on and learn it so they can participate on this part of the band too. See, in order to USE that part of the band, you DO have to learn the code! (you just don't need to learn code to use the voice part of the bands on HF) So now people will be learning the code because they WANT to, not because it is a requirement! And THAT is why you will have MORE morse code users on the HF bands than ever.

I did learn the code many decades ago, again only to get the license, and in my case to operate on VHF, I didn't even want to use HF at all. But once I passed the test, I never again ever used morse code, in fact I forgot all of it except for SOS and 2 other letters. (R being one, as it is at the end of just about every 2-meter repeater id)

But when the morse code requirement is finally dropped in the US like elsewhere, I will learn it again! I have been wanting to learn it again only for the sake of being able to know what they are saying in old movies and old time radio programs where you occasionally hear some morse code. I want to learn it for myself again because I want to learn it, but have not done so because of the bad taste in my mouth I get from knowing it was forced opon me when I got my ham license, and the only way I will learn it again is when it is MY wanting to, and not a government requirement that makes no sense. I already have my Extra license, (and the original was one of those that came in a nice certificate, not the crap laser printer kind you get today) so I don't need to learn the code, I want to learn it again for OTHER reasons, but I will wait until the requirement

is dropped.

Once it is dropped I may actually get on the CW part of the bands and join in the new flood of CW communications that will grow from the requirement being dropped and people learning and using it for their own nostalgic use of it, not because the government or elite snob ham operator told them they had to do it.

> I could really care less if
> they drop the code tests. With 5 wpm, for all practical purposes, they
> already have.

You don't know much about code then. It is just as easy to learn it at 15 wpm than it is at 5 wpm and anyone that learns it at 5 is only hurting themselves, because then it becomes almost IMPOSSIBLE to learn it any faster after that! That is a proven fact, and why smart people learn the code using the farnsworth method.

Dropping it to 5 wpm was ridiculous and just shows the FCC doesn't know anything about learning code, or they wouldn't have done this. Either keep it, or get rid of it, don't reduce it to 5 wpm, that is the most ridiculous and idiotic thing to do.

> I just can't stand the whiners...Whine, whine,
> whine...

Yes, but those doing the whining are those that want to keep the requirement, even after it has already been dropped over a decade ago, and now even the world has agreed to drop it for HF. They would have done it sooner, but they had to wait for 2003 for some reason. I told people years ago it would be dropped at the 2003 conference because that is how far away they pushed off voting on this, else had they voted sooner, it would have been dropped sooner.

> .Such a waste of energy, particularly being they are wasting
> it in the totally wrong direction. They should tell it to the fcc,

They don't have to tell it to anyone, it will be dropped without any effort at all. The FCC dropped the requirement over a decade ago! The HF part only stayed for international agreement, or that would have gone too way back then. It just takes the US government a long time to do something, so you just have to wait a few months, but they will get to it.

So, why does anyone against the requirement need to whine? No reason as the requirement is gone. The only ones whining are those that wanted it to stay. And that whining we will have to listen to for another decade yet.

> We don't have any control over it, so whining to us is a total waste
> of time.

Then why not stop? :)

> It makes me laugh that someone would spend so much time and energy
> trying to convince people that have absolutely no control over the
> matter.

How much time did you spend joining this debate about something you have no control over?
Do as you say, not as you do, eh?

> Better than the freaking comedy channel if you ask me.
> MK

You can say "fucking" now, the FCC has approved the word for broadcast and children's ears so long as it is not used in a sexual description, so no reason to be self censoring ourselves anymore on newsgroups. Besides, how idiotic is it to make up a new word that means the old word as if one is so much more offensive than the other when they both mean the same thing.

What a fucking joke.

Don't change the subject, the point here is that you are not given code privileges with an HF license as is PROVEN by the fact that a tech class ham can also use code legally on VHF. Therefore, your statement is false.

> amateur radio is going to survive if the gatekeepers continue to limit
> access to those who can prove a working knowlege of morse code.

This theory was proven false over a decade ago. Old hams were dying off, no one new was coming in
and there was a threat of losing some of the spectrum from lack of use. Then the code requirement
was dropped and a tremendous flood of new blood applied for and received their new ham licenses.
Dropping the code is why ham radio is still alive today.

But none of these hams are upgrading to HF as the stupid people thought would happen, and there is a
risk of losing spectrum below VHF for lack of use even with all the new hams. The upcoming US
dropping of code requirement on HF will again open a flood of new hams using the HF spectrum and saving
ham radio once again.

> The
> code was at one time one of several useful tools for communicating,

Yes, very useful because there were no such things as microphones and speakers. Once we invented
those, the telegraph system quickly changed to telephones, and then everyone could have one in their
homes. The public didn't have telegraphs in their homes, because that would mean everyone would
have had to learn morse code first, and that is never going to happen, so they had to go into town to a
telegraph station and have that guy send the message. When telephones came around and people could
just talk, then we saw the technology go into people's homes.

Even now, the ham bands are dying and the ARRL is always asking me for money to help save spectrum,
when the answer is just stop keeping people who want to use those bands from using them, drop the code
and they will be used again. But the ARRL is just another big form of government that is too scared
to take a side on an issue that might lose them some votes, the key is to not take any sides and think
you are going to get 100% of the votes.

> but it has been outpaced by other faster technologies that are easier
> to learn. Military and commercial use of the code has all but ceased.
> So who's left - HAM's.

And thank god that there is a club that wants to keep it alive for nostalgic and historic reasons, as
well as have fun with it. By all means, always keep a section of the bands reserved for code.
Just stop keeping people off the voice bands on HF that don't want to use code.

Once the flood of no code hams comes to HF land, and there is no pushy code requirement, you will see a
LOT of those hams learning code because they WANT to, not because they are TOLD to. That makes all
the difference in the world!

I know two friends now that are tech class hams and said they will not learn the code until the
requirement is dropped. When it is dropped, they will first upgrade to Extra, then they will learn
the code afterwards on their own, because they want to, not because they are told to.

When you want your child to mow the lawn for you, you don't tell him he has to do it, you tell him he
CAN'T do it because it is too dangerous. Then all the kid wants to do is mow the lawn, and finally
you let him do it and he does it because he WANTS to do it. If you turn that into a CHORE and force
him to do it every week, he will lose all interest in it.

Same with Morse Code folks! Let people do it for the enjoyment of WANTING to do it.

> Is there a need for HAM's to use the code in emergency situations?

No, else police, fire, paramedics and military would use it.

> Should amateur radio licenses be subject to passing a test?
> Absolutely. However the test should require knowlege of skills that
> are appropriate for

for operating RF equipment. Safety and Rules.

Just as a driver's license has testing requiring knowledge of safety and rules of the road. No tests
about how to ride a horse or have a picnic with your car is required, but you are free to do those on
your own time if you wish.

> todays world. Knowlege of radio technology and
> electronics are an absolute must for safe operation of poetntially
> lethal equipment. Proficiency in communicating by voice and one or
> more digital modes on several bands should be a requirement.

Careful! The requirement of a digital mode would just be as asinine! Using morse code or digital

has nothing to do with interference or deadly harm that could come from misuse of the RF equipment.

Just compare Ham radio to GMRS and FRS. No license is needed for FRS, because it operates at low
power, just like your cordless phones and other consumer devices that are not much a threat to
interference or safety of life, no license needed. As soon as power and antennas are bigger and
higher, then you need a license, as with GMRS, to show responsibility and qualifications and
citizenship. But with Ham radio, you are being allowed to use hundreds of watts of power, build your
own radios and antenna systems, all things that GMRS people are not allowed to, so instead of just
sending in a check for the license like with GMRS, you need to take a test first.

You don't need to take a test to ride a bike, but you do need one to drive a car, same difference.

> The
> Morse code should not be one of those required digital skills however,
> because it has little useful application in todays world.

No, the REASON is that it has nothing to do with SAFETY, INTERFERENCE, RULES or common sense.

> The gatekeepers of the hobby should be looking for ways to reduce the
> average age of the licensed ham by enticing new entrants into the
> hobby.

Age restrictions or requirements are discriminatory and wrong. Age has nothing to do with qualifications or intelligence, and never should be a factor for any laws. Each individual is
different. A 20.99 year old who is refused a beer because he is not responsible suddenly becomes
responsible at the stroke of midnight when he becomes 21? RIDICULOUS! An 18 year old that is not
responsible enough to handle a beer, IS responsible enough to use weapons of mass destruction on Iraq
and Afghanistan and kill people? RIDICULOUS!

Why would I need to do that. A friend of mine actually knew and talked
to the guy when he was alive. I don't need to search anything. What
makes you think that your comments about learning CW hold any weight
with me, if you can barely make out an SOS? Get a grip...I'm probably
in the upper 90-95% bracket as far as CW users. I think I have a
fairly good grip on the best methods of learning and using code. The
farnsworth method is bad news to anyone that plans to actually use the
code on the air. It promotes poor timing. MK

We had to learn morse code to advance in Boy Scouts. I remember thinking we were all pretty sharp signalling each other with flashlights at campouts. Then, our scoutmaster (who was a HAM) let us hear some of the code on his rig. Those guys were FAST.

I have a PRO-2006 scanner with a CE-232 built into it (I removed the power supply to make room for it internally -- you need to use a wall wart to power it.. I then put a DB-9 connector on the back panel of the PRO-2006). Works great. It's also for sale. If you're interested, E-mail me... feinstei@comcast.net

Our choices boil down to MF, HF, VHF, UHF, and various bands above UHF. You said change frequencies well as you can see the options are limited.

Those of us who have operated HF extensively have seen conditions under which no HF band supported voice communications. While I haven't been as active as I'd like, I've probably seen this happen at least once a year.

I've used ground wave extensively on "dead bands" but again there are limits in propagation distance. You will not reach the US mainland from Hawaii on ground wave propagation.

Well if all you are concerned about is communicating a mere 20 or 30 miles and only care about US, that is your prerogative but even in the mainland of the US, it is possible for a hurricane or earthquake to knock everything out in larger areas than that.

I don't believe the quarterback is allowed to be in direct contact
with the coaching staff via radio. That's why the coach signals from
the side lines, or sends in the play with a player.

2234. Newbie - Entering/understand Trunked Freqs/Fleet Maps

Newsgroup: rec.radio.scanner
Date: 2003-10-16 04:15:09 UTC
From: Mickey A <cmalberto@nospam.hotmail.com>
Message-ID: <gXojb.313957$p36.3161960@news.easynews.com>
Source record: 25437

I am slowly picking up a few things about trunking but still slow. I bought a Pro94 tonight and finally got some Trunked Frequencies entered(I may have missed some). I am not getting as much traffic as I would have expected. I read something about Fleet Maps but struggling to choose a correct one. I seem to get something on the default E1P1 but now up to E1P2(wow). I don't when to stop. Is there a cheat sheet for my area of Beaumont, Texas????

Manual says to press Trunk, then Scan, the Search and that just confuses the heck out of me since I was thinking this is a lot of key presses just to scan. As you can tell, I am still learning. I suspect the hardway.

Any tips, pointers, suggestions would be appreciated.

P.S. My old scanner became obsolete due to Trunking.

Tuesday 14 Oct 2003

VDA 4380: AN-124, Volga Dnepr, Russian Contract Airline (Heavy cargo)
3:10am: Area transition, poss landing at CCAFS.

CONGO 63: UV-18B DHC-6 DeHavilland Twin Otter, USAF Academy
9:45am: Parajumps at Cape Canaveral AFS, all day long, ;just as yesterday.
[118.625]

CAJUN 11: A-10A, New Orleans NAS/JRB AFRC 926FW 706FS
9:50am: Cleared to NBQ, which is Kings Bay NS, GA, but since New Orleans NAS
is NBG, the Patrick Clrnc Delivery folks might have mis-spoken. Yesterday's
flight of CAJUN A-10s were cleared to PAM (Tyndall AFB).
10:00am: Departs Patrick.
[289.4, 269.375, 281.425, 307.0, 273.55, 269.25, 317.6 direct Robins, 16,000']
I could have held his handoffs much longer; great sound for that altitude.

SEARCH 01: UH-1, NASA-KSC Security/Survey Helo.
9:52am: Lands Patrick.
[133.75]

N696US: NA-265-65 Rockwell Sabreliner, United Space Alliance, Houston TX
10:05: Lands Space Coast RAP.
[132.65, 118.9]
This acft, based at Ellington Field, Houston, is the acft of the Space
Shuttle support contractor at KSC. With the Shuttle orbiters grounded we have
not
heard from this acft lately, until today.

NASA 913: T-38N #65-10355, NASA-Johnson Space Ctr, Houston
10:17am: Lands Shuttle Landing Facility.
[133.475, 124.8, 132.65, 128.55]

CUTLASS 15: T-37B, Columbus AFB 14FTW 41FTS
10:26am: Area transition at 12,000 ft.
[317.6 Jax Ctr @ Lowell]

GRITS 02: C-17A Charleston 437AW
10:27am: Comms with MacDill tanker BOLT 22 during refueling.
11:25am: Inbound to Patrick, touch-and-goes short rnwy (29).
[327.6 (AR-202), 132.65, 133.75]
Got some nice photos of him during TAGs: MVC-334, MVC-335.

BOLT 22; KC-135R, MacDill 6AMW
10:27am: Comms with MacDill tanker BOLT 22 during refueling.
10:47am: Inbound MacDill, Alpha 2 for inop inboard flaps indicator.
[327.6 (AR-202), 311.0]

SEARCH 03: UH-1, NASA-KSC Security/Survey Helo.
10:35am: Touch-and-goes at Patrick.
[133.75]

CUTLASS 22: T-37B, Columbus AFB 14FTW 41FTS
10:39am: Area transition.
[317.6 Jax Ctr @ Lowell]

ASCOT 3624: L-1011 Royal Air Force, UK.
11:08am: Lands Patrick.
3:20pm: Departs to Washington Dulles IAP.
[118.4, 132.65, 133.75, 124.8, 133.475]
My photo: MVC-340

NASA 4: Gulfstream II, NASA-KSC
11:40am: Departs Patrick to Melbourne IAP for practice approaches, then continues them at Space Coast RAP.
[133.75, 132.65, 118.4, 118.9]

KING 64: HC-130P #64-14864 Patrick AFB 920RQW 39RQS
11:55am: Departs Patrick to work PJs in Judy DZ.
1:15pm: Departs to Crown DZ.
1:18pm: Tells USCG Cape Canaveral about intention to use flares, smoke.
3:05pm: Is Alpha 2 for pilot director, and DF #2 is still interfering w UHF radio.
3:08pm: Lands Patrick.
[133.75, 157.1, 321.0]
My picture: MVC-336

N21NG: LJ-35A #343, Northrop Grumman JSTARS Integration Facility, Melbourne.
12:00 noon: Inbound Melbourne IAP.
[118.2]

ASCOT 2644: VC-10, Royal Air Force, UK.
12:07pm: Lands Patrick.
3:35pm: Departs Patrick to fix on Vero Beach 140 radial.
[132.65, 133.75]

AKULA: F-16, Homestead JARB 482FW
1:10pm: Working at Avon Park Bombing Range.
[307.1, 292.2]

JOLLY 21: HH-60G Pave Hawk Helo Flight of 2.
1:13pm: Departs Patrick.
[133.75]

N1A: Goodyear Blimp
1:26pm: Southbound, comms with ATC on VHF freqs; comms with Pompano ground ops on 151.625. Tells ATC will be working the Miami-Temple game.
1:54pm: Informs Pompano "3.5 hours to go."
[132.65, 118.2, 151.625]
My pics: MVC-337, -338, -339

COIL: F-15, FL-ANG, Jacksonville IAP
1:27pm: Area transition.
[273.55, 387.0]

GOLIATH: E-3 AWACS, Tinker AFB 552ACW 960 ACCS
2:19pm: Rqsts 4 Xray Area. Will be working with SNAKEs.
[267.5 Sealord]

JV-513: C-9B Jacksonville NAS VR-58 "Sunseekers" Sqdn
2:21pm: To Orlando Exec.
[307.0]

MAKO 11: F-16, Homestead JARB 482FW
2:56pm: Working at Avon Park Bombing Range.
3:25pm: Departs Range.
[138.125, 285.725, 264.625, 307.1, 292.2]

SHARK 21: F-16, Homestead JARB 482FW
3:15pm: Working at Avon Park Bombing Range.
[139.8, 285.725, 264.625, 307.1, 292.2]

DOS 34W: UH-1H #65-09915, US State Dept Intl Narcotics Mission, Patrick AFB.
5:05pm: Touch-and-goes. 5:45pm: Lands.
7:00pm: Departs.
[133.75]

NASA 921: T-38N #66-8387, NASA-Johnson Space Ctr, Houston TX
5:11pm: Inbound SLF, calls SLF Twr UHF for field conditions.
5:30pm: Lands SLF.
[284.0, 133.9, 133.475, 124.8, 128.55]

UNID
261.625 5:32pm: Satcom signals.

NASA 924: T-38N #67-14825, NASA-Johnson Space Ctr, Houston TX
5:40pm: Inbound SLF, calls SLF Twr UHF for field conditions; informs Twr that they are currently 200 mi west of the field; asks for score of NY Yankees vs Boston Red Sox game. Says will land "on the hour." (wasn't far off)
6:01pm: Lands SLF.
[284.0, 127.475, 133.9, 128.225, 126.525 (FL 290), 133.475 (FL 250), 132.65 (6000'), 128.55]
NOTE: The pilot's announcement that he was 200 miles west of the field got my attention. His signal into here was powerful. Makes me wonder how far out I could keep him if I added another segment to my tower.

PAT 442: US Army Priority Air Transport
6:05pm: Descending.

KING 76: C-130, Patrick AFB 920RQW 39RQS
6:55pm: Departs Patrick.
8:00pm: PJ operations at BamBam DZ.
9:00pm: Departs, rendezvous with JOLLYs for AAR.
10:27pm: To JOLLY 32: "We'll leave the hoses out for your rendezvous training."

10:40pm: Inbound to Patrick.
[133.75, 132.65, 321.0, 251.9 (Air-Ground in DZ)]

JSTARS: Northrop Grumman Integration Facility
6:58pm: Test comms, short duration.
[308.85]

JOLLY 31, JOLLY 32: HH-60G Pave Hawk Helos, Patrick AFB 920RQW 301RQS.
Acft 90-26231 and 90-26232.
7:28pm: Departs Patrick.
7:29pm: Comms with BamBam DZ
9:55pm: Air-air refueling with KING 76.
10:15pm: JOLLY 31 lands as single ship, JOLLY 32 continues "rendezvous
training" with KING 76.
10:36pm: JOLLY 32 lands.
[269.375, 251.9, 321.0, 255.5]

FL CAP Net
8:45pm: FL CAP 1908 is NCS, many check-ins.
[148.125]

JOLLY 38: HH-60G #90-26238, Pave Hawk Helo, Patrick AFB 920RQW 301RQS.

If you do not see a rubber ducky antenna on one side of the headphones
or a cable leading down to a handie-talkie some place on their person then look
for a long cable following the coach around, the headsets may be "Hard Wired" to
a team intercom-inter headset system.
Will the stadium security allow a police scanner in the stands? If they do
try a search
from 460 Mhz to 470 Mhz for their communications! Out in the parking lot is
another good
place to try a search before and after the game.
Try this site for frequency info <http://www.fordyce.org/scanning/>

In addition to the queston below, I was wondering why I can't enter Trunk frequencies between 810.000 and 824.000 that are listed in my book. I always get an error. The only other ones that were allowed were the repeater frequencies. That seemed odd.
"Mickey A" <cmalberto@nospam.hotmail.com> wrote in message news:gXojb.313957$p36.3161960@news.easynews.com...
I am slowly picking up a few things about trunking but still slow. I bought a Pro94 tonight and finally got some Trunked Frequencies entered(I may have missed some). I am not getting as much traffic as I would have expected. I read something about Fleet Maps but struggling to choose a correct one. I seem to get something on the default E1P1 but now up to E1P2(wow). I don't when to stop. Is there a cheat sheet for my area of Beaumont, Texas????

Manual says to press Trunk, then Scan, the Search and that just confuses the heck out of me since I was thinking this is a lot of key presses just to scan. As you can tell, I am still learning. I suspect the hardway.

Any tips, pointers, suggestions would be appreciated.

P.S. My old scanner became obsolete due to Trunking.

Can't answer your question in particular, but I've noticed in last 3 weeks or so, they have had "some" problems. Mail was slow at best to arrive and IMs didn't. At that period of time, I had asked others in other areas if they experienced same and some acknowledged. So, apparently, they must be having "some" problems. L.

Ask for our list of items on clearance!

Hi there,
I am looking for a Pro-23 this is the 4 channel crystal scanner from the mid 80's or maybe even a Pro-26. If you one in your closet that you are not using and would consider selling it please let me know?
Please list condition and if you have both antennas and the box etc...
Please reply to my post on the news group and I will respond back.
Thanks very much
-Russ

Mick, if I may. Check the Yahoo trunk tracking groups. They are loaded
with help from fellow users.
It not like news groups, it's much more concentrated on a particular
subject.

Manual can be found online at radio shacks web site.
http://support.tandy.com/support_electronics/36542.htm
I am selling a 100 Ch. programmable scanner. The scanner is used, but works very well, and is in excellent condition.

Helps keep your eyes on the road. Just touch buttons to search preset 800MHz police/fire, weather, DOT, highway and VHF police frequencies. Also provides band search in 14 preprogrammed frequency ranges and HyperSearch direct search - up to 300 steps per minute. During search, data skip and 20 programmable search skip frequencies help prevent lockups on undesired signals. Mounts under dash or in the car stereo dash opening in many vehicles (some dash adaptation may be required).

Picture shown is not the radio I am selling but is the same unit.

Unit will be sold as is. No power adapter will come with it. But I'm sure you already have one kickin around somewhere.

Happy Bidding!!!!!!!

The Good Lord

Okay, now things are getting personal. It seems not
only bushite soldiers murder our innocent families for
no rational reason but to serve as enemies of God under
the antiChrist, they now need to blindly forget about
protecting the sacrificed family they almost know best
as their stupid own. Who gives a fuck if bush wants to
rob American tax payers a say in paying block grants to
fix things they criminally break? See? This is why
bush can't declare the money spent should be a loan, for
then, someone might be held accountable. Billions have
been already stolen from the UN's escrow account, while
the central Iraq bank, has those heading it, likely
directly involved in it's alleged current robbery. How
else could the plan made prior succeed? Ha ha. It's
almost like they imprison themselves on purpose for our
benefit. ALL Americans are too weak as stupid they keep
selling US. Now then, when's the fictional God King
fellow, gonna make our entrance disguised as a simple
man of few means, trying to get his show biz break in
the international media under the fantastically named
Johnny Wizard bill?

We, as, humanity, must make bush accountable for
the criminal waging of our rights as Life. "Why blow up
anything in Iraq", ask a mindless as DU poisoned bushite
soldier participating in death squads to murder women
and children? Our war crime perpetrators we need to
raise our guns in defense to, are: buford blount, tommy
franks, rumsfeld, bush, Condoleeza, and likely mueller.
Remember: The FBI informed US that bush's business
partner, (THE UNARRESTED) General Ahmad mastered 200,000
DOLLARS to give Atta, The 9/11 Mastermind, then, worked
with Condoleeza to devolop the 9/11 Afghanistan plan. A
TOP SECRET Presidential Directive reported on by MSNBC's
Jim Miklaszewski. A DOCUMENTED plan of not following
the criminal leads to arrest the actual perpetrators, to
secure criminal invasion against the American flag
waving, Taliban. Dated two days before 9/11 came down,

and confessed to MSNBC in March by the White house, after deliberation, as fully implemented. Evil is just the deceived disguised, and there's really not much to fear of really like whatever. Evil is dumb. Always has been. Humanity, through our public media, often glorifies humanities worst malcontents, as have deft skills of persuasion, instead of our failed ability to simply challenge criminal transgressions like those TRULY perpetrated by the bush demon for instance. Or how about a soldiers word, not found as capable, but for form letters to try and trick the family back home with bush lies crying. Have you heard the true death count? Who wouldn't defend their family from any irrational proud bushite soldier, who as cowards, would murder the practically defenseless and hungry, innocent and God loving, like our family as our brother at Guantanamo, while as traitors, fight to protect those responsible for murdering thousands of New Yorkers? No instead of protecting America, they spread radio-active toxic waste on themselves, while fighting to persecute people not guilty of any criminal offences. How weak and stupid, can the almost fictional antiChrist really take a dying America down counting for?

The ungodly bush demon demanded that evidence wasn't required to arrest the 9/11 culprits, that he decided instead, as planned before hand, with rumsfeld, would war our undefended families to toll further criminal sacrifices. Perhaps millions. Get bush for me please.

Johnny Wizard

--

It all seems pointless to his wife. ``Why is he there?'' Graham asked Brown, lips trembling.

--

First of all, the point here is not that 170,000 items were stolen from the Iraq museum, or that most American corporate media records the losses, as only those that were stolen from the lobby; it is that AMERICAN PLANNING was underminded by the demon bush "cabal".

The telephone exchange for example was blown up with several bunker busters (DU weapons containing hundreds of pounds of toxic waste to harm all of Humanity) for no reason but bush's evil to steal life from God and Nature. (The Iraqi military had hydrogen generators, and can use walky talkies instead of payphones.) Why blow up whatever in Iraq to murder our families for demon bush to cash US out as traitor I ask You?

Second, microscopic DU is a TOXIC heavy metal, as poisonious to human beings, and as light as the wind. Also, being radio-active, a single

particle breathed into the lungs, can mutate DNA. Similarly to outside background radiation can externally, but at 1900 times the level, internally.

That's right, and don't you forget it. Every conspiracy theory you have ever heard is absolutely true....

You did however leave out the fact that a man with an Arab sounding name Al-Gore masterminded it all!

Right...When they started novices on 10m fone, the use of code on the other HF novice bands dropped 50% overnight. When they started the no code tech, the use dropped even farther. Like I said the other day, whatever it is that you are using, send me some. I want to become delusional and bark at the moon also. MK

Don't blame all Americans for the acts of our government. We have no control over them anymore. Hell, Bush didn't even officially win the election in 2000. Please don't offend me or people like myself who don't agree with the Bush administraions foreign policy anymore, thanks.

HELP - WHAT IS THE BEST NEW SCANNER?

Looking for owners that actually own the scanner that can recommend a
good all around scanner. Thanks.

2262. HT2000 scan

Newsgroup: rec.radio.scanner
Date: 2003-10-17 01:59:54 UTC
From: "Bar B. Que" <duckie74@yahoo.com>
Message-ID: <u2Ijb.5290$XY7.2789@newssvr17.news.prodigy.com>

I have a question -- How does one program the HT2000 to scan a priority channel? Channel 1 is listed within the scanner list yet it doesn't jump to the channel when there is activity.

Anyone have any ideas?

Thanks!

2263. Re: NFL quarterback radios?

Source record: 25366

They have been in use since around 1994. I did a story on them for a local Monitoring Newspaper which was in publication at the time.

There are small receivers built into the helmets of the quarterbacks. They are roughly the size of a credit card. Typically the spotting is done either from above or by a QB coach or backup QB. You will often see a QB putting his hand to the side of the helmet, he is trying to hear better when he does this.

The communications are secure (DSP if my 9 year old memory serves me correctly) so they cannot be heard by either the fans or the opponents. There is an off-field NFL official who cuts off the communications when either there are 15 seconds on the play clock or the QB sets at the line of scrimmage. There cannot be any coaching or directing while the ball is in play. I did know the frequency range but cannot recall it right now.

The headsets you see most of the head coaches wearing are to their assistant coaches upstairs spotting the game and relaying the info and play suggestions downstairs. While the head coach gets most of the credit, there are a ton of other coaches who are a supporting staff suggesting plays and player match-up. Very often when the offense or defense leaves the field on a change of possession, you will see a number of players get headsets or hardwired phones and talk with their coaches for some insight from above.

Hope this helps

Grab a Uniden 245XLT portable and/or a Uniden 780XLT base model. I have both and rarely go more than 2 blocks
without one.

If you want to pick one over the other, I'd say the 245XLT is a good buy, simply because it can be folded up and put into
the glove compartment in the car when you aren't using it. Get a good aftermarket rubber duckie for it, too.

The 780XLT is great as a base station radio, and can be used in the car but needs to be packed away if you leave your
car unattended.

Both are great for listening in on analogue frequencies.

The manual is junk, but the scanners are pretty good. Only gripe I have is with the 245XLT. Too bad they didn't set the
alpha-numeric labelling that can be set within the 780XLT.

If you opt for the BC250 or the BC780D, be careful. It will not pick up APCO-25 ProVoice based digital activity. So unless
your local community is using an "open" APCO-25 digital broadcast base, you may be out of luck.

The Radio Shack Pro-96 will not pick up Erickson's Pro-Voice system either.

Just my two cents.

The military does continue to use it under some conditions.

The police, fire, paramedics are operating local communications only so their requirements are quite different. VHF frequencies are more than sufficient for their needs.

Your arguments simply demonstrate your lack of knowledge about operating on the HF frequencies.

Comes with a DC power adapter. You can also get an adapter that will run
power out of the cigarette lighter. The BC780XLT comes with one of those.
Leave the scanner plugged into the DC power adapter overnight and you'll
have enough power the next day to last all day. The 780XLT does not come
with a battery pack, but there is one
available at extra cost (and you have to put it in yourself).

If you get either and want to use it in your vehicle, I'd suggest a trip to
your local Radio Snack and get a "car kit", which
is nothing more than a casette tape with the recording heads and tape taken
out, with just the audio play head, and a
cord that goes into the audio source such as a CD player or a scanner. I use
one, and the difference in sound emitted
from the 245XLT's speaker and what you get out of your car's sound system is
vastly different and much better than the sound emitted from the scanner's
speaker. Keep the 245XLT upright in the cup holder. Just slip the cassette
in as you would a Bee Gees or Village People tape. Be sure to eject the tape
when parked to release the springs inside the cassette player.
Once done, either take the scanner with you or fold it up (detach antenna)
and put it in the glove compartment.

I have a BC -245 and a Relistic Pro-93. Get the Pro-93. The Pro 93
has a wider range of programmable frequencies. It uses rechargable
batteries or regular "AA" batteries(4). It also has an alpha text
feature that lets you label the frequencies on screen as you receive
them.
Good luck.

First you need to figure out what you need. Do you need trunking and if so what kind. Is your area digital and if so is it 9600 baud or not. Your choices narrow significantly as you need more features. For example if your area is digital 9600 baud your only current choice is the RS Pro 96. If you have no trunking or digital you have a huge choice of new and used scanners.

If you just need a generic scanner with no trunking or digital then you should find and opinion from someone who lives in your area or similar area. If you are in a urban area you do not want sensitivity. If you live in a more rural area then you will need more sensitivity if you are trying to pick up an signal from further away.

It is not as simple as to what is the best.

The PA-SitRep emergency e-mail list is a free tool that will enable you to monitor major emergency situations throughout the State of Pennsylvania including major weather emergencies, natural disasters, environmental disasters, civil disturbances and threats of terrorism, major fires and manhunts.

Messages posted to the list may be recieved with just about any digital cell phone which allows PA-SitRep subscribers to keep up to date with MAJOR emergency situation reports posted to the list while mobile or away from other news sources such as TV or radio.

Message volume on PA-SitRep is EXTREMELY low and users may subscribe and unsubscribe at any time (PA-SitRep is NOT an incident reporting list - ONLY MAJOR Emergency Situations in or relating to PA are posted).

PA Scanner enthusiasts are a perfect fit for our PA-SitRep Contact program. Please consider volunteering as a Contact.

Scanner enthusiasts in PA are needed as PA-SitRep Contacts. Please consider pitching in. Visit the following address for more information: http://www.pa-sitrep.com/contact.htm

PA-SitRep is a free, 100% non-commercial, nonprofit, e-mail list and web site.

Mint condition BC780XLT scanner. Complete with box, docs,
manual & warranty card. Unit is about 1 year old and is a 10
electrically, a 9.95 cosmetically. Box is a little bit tattered.

When purchased, a discriminator tap was installed by a local
radio shop. Output is to a gold RCA chassis mount connector
at the rear. Works perfect for decoding pagers, digital signals
and Police Mobile Data Terminals (MDT's)....

Will ship FREE via USPS Priority mail to the north american
continent. Purchasers in hawaii or europe will be charged $15.

Payment is by USPS money order ONLY, please!

Asking $250 but will take best offer.......

From: Al H <star111lists@mindspring.com>
Message-ID: <ai03pvk4kq9q2a61ubkbfij4os2p9th39a@4ax.com>
Source record: 25387

It depends on
1) The conductor
2) the mood of the other passengers.

I carry my scanner on the train all the time. I do not use an ear phone, but then I only listen to the channel that the Amtrak is currently running on, which passengers hear anyway because the conductors have their radios on (some have earphones but most don't). Also I keep the volume way way down, so for the most part the train noise cancels out the scanner noise for anyone beyond my seat. I usually have to put the scanner up to my ear when there is any activity. When the train is crowded I turn it off except when there is a problem like a stopped train. In those cases, the passengers are usually asking me whats going on. Most of them think I am an Amtrak employee, primarily because of the radio and other geek stuff attached to my belt.

If you are going to be listening to all the neighboring police frequencies etc and your scanner is going to be constantly crackling, then earphones would be a necessity.

On my travel, one of the conductors noticed what I was doing. The next week (I travel on the same train every week), he showed up with a list of frequencies they use on their line, the mileposts where they change and all of the signal interpretations.

I'm not sure what you mean by "the right kind of earphone". Is there something different about the ear plug on your scanner? Single line ear plugs are available at any Radio Shack for probably about $2.00.

Impossible question. It's like asking what's the best car.
Even if your neighbours travel on the exact same roads as
you, they will still have different cars depending of a
wast number of reasons.

If there where such a thing as a best new scanner, everyone
would have bought the exact same scanner, right?

I would think that the most popular scanner the last couple
of years would be the BC780, so that might be the best
all around scanner for most people. But then again, it
might not be the right thing for you.

Hi all,
I just picked up an old used Bearcat 155. It works fine, but there's a port on the back that has me puzzled. It's a cut into the circuit board with four metal strip contacts on the bottom.
Does anyone know what it's for? I posted 3 pictures on http://noah.afraid.org/scanner/bc155.html

TIA,
-Noah

Source record: 25392

How long are the longest elements? They would need to be about 15 1/2ft long for 30mHz or about 11 3/4ft at 40mHz. I believe the Scantenna is a re-marketed TV antenna and if so it would drop off below 54mHz. The longest elements would probably not exceed about 8 1/2 if this were true unless some loading was employed.

> anymore, thanks.

Oh bullshit, sure you do. Vote him out next time if you don't like him.

He was declared the winner by the Electoral College, but Americans do not directly vote for their President anyway.

The electoral system down there is the pits. You guys need a national uniform system of balloting.

But I would blame the Americans for accepting dumb government decisions such as slapping a heavy tariff on software
imports from Canada. But yet still want our power and paper. Here is Bush going off on this free trade thing is good for America, but yet a dumbass policy of slapping on a tariff to protect Georgia located producers of hard wood which isn't all the best grade lumber is hypocrisy.

Bush's foreign policy needs a rework. And so does that idiotic deal that allows Bechtel to rebuild Iraq's infrastructure when
European and Asian interests can also do it, and should be in on it, too.

The U.S. is not 100% "free" either. Try licensing a truck for commercial purposes across several states from California to
New York.

The concept of the U.S. being the origin of democracy is crap, too.

Just my two cents (three cents Canadian at current exchange).

Hi,

I have put a free software-download on my website,

It's a program called :

TETRA MOBILE STATIONS DETECTOR 1.2

Feel free to download it at

WWW.TETRASCANNER.COM

You will find it in the "FREE SOFTWARE" section

It's a limited-demo-version for windows

This version needs a icom R-10 scanner and a simple interface-cable
(plans for interface included)

It scans the tetra-channels (lower-band) in such a way that all
timeslots are sampled correctly,it reads the signal-levels and
stores them in a log-file, scanner scans with squelch open to avoid
skipping problems.the program is clever and wo'nt log non Tetra-signals.

Yes i know it does not decode/demodulate...but it proves that it can
be detected.

Full version is available (not free) on request

Greetings

==========

The overall length of the 2 longest elements is 101"s. Assuming
a 1" gap in the middle, that would make the elements themselves 50"s
long each. If my math is correct that would make it resonant around
54-56 mhz. And should work fairly well on 49mhz, mine did. Im wondering
if the little transformer that came with his antenna went bad or was bad
from the get go. That would have been the first thing I would have changed,
because there is no reason why it wouldnt pick up 49mhz very well.

Jeff

He's using a Yaesu VX-150, which isn't really a scanner...it's a 2-meter transceiver that can scan out of band. The unit uses a 4-element plug for the external speaker/microphone option.

Message-ID: <fdGkb.184831$%h1.174617@sccrnsc02>
Source record: 25255

I'm not a radio scanner hobbyist, but I thought
you folks might be able to help.

I have an 802.11b wireless network in my house;
the access point is a Linksys DWL-1000AP. I also
have a pair of baby monitors, made by Safety 1st.

I believe the wlan operates at a frequency around
2.4 GHz, and the baby monitor at 49.8 MHz.

I suddenly noticed considerable degradation in
the performance of both of these devices. They
continue to work, but the network connection
is very spotty, and the baby monitor has lots
of noise.

Questions:

Is there one thing (possibly at neighbor's
house, I live in a townhouse) that could simultaneously
disrupt both of these devices?

Is there an inexpensive tool (scanner?) that can
search an arbitrary range of frequencies and report
the presence of signals and their relative strengths?
I don't have a need to listen to signal per se, more
interested in identifying it.

More generally: how does one approach the problem
of troubleshooting radio interference?

thanks for any information,
-usman

Source record: 25259

I just bought an old Uniden Bearcat BC140 10 channel programmable scanner at a garage sale. I know almost nothing about scanners. I bought a telescoping antenna at Radio Shack that seemed to fit into the antenna outlet on the scanner. I found an AC adaptor that works. I programmed some local police frequencies in that I got about 6 years ago. When the scanner is scanning through the stations, it stops on a couple of the channels, and there is noise (not squelch noise), but I can't hear any talking and I'm trying to figure out the problem.

Do police frequencies change regularly so that my old frequencies are no longer right?

I live in a rural area and the police departments that are programmed in are about 15-30 miles away. Am I too far away from those towns? I also live in a house covered with metal siding and roofing.

Thank you for any help you folks can provide!

I bought this scanner from someone on this site about 1 1/2 years ago.
800 restored. Some other mod I never really understood. What it is
worth I do not know. Works the same as when I bought it, no time left
to play.
I think I paid $300 for it. Make me an offer!

Here's a site that has conventional frequencies along with trunking
frequencies
<http://www.cityfreq.com:81/>

And this site will have a lot of information
<http://www.strongsignals.net/index.cgi>
Place the scanner and it's antenna in front of a window or get an out side
antenna.
Keep the antenna installed out side away from the house.

A really easy antenna
you can build your self is a dipole antenna made out of a twenty
(20) foot or longer length of Co-Ax cable. Install a plug on one end to
go into the scanner radio. Then on the other end, strip back twenty inches
of the outer Co-Ax shielding
and let this shielding hang down. Take the inner conductor and hang this
twenty inch long
center conductor up, out side the house again away from the siding.

Try disconnecting the Wireless Lan and see if the baby monitors work
better. Then try disconnecting them to see if the Lan works better. This
way you can find or eliminate them interfering with each other. If they
still don't work properly then look around to see if there's anything
else you have that can cause it. Moved anything electronic in the house
recently? New microwave or PC? Check all the possibles in your house

before you look elsewhere.

If you haven't already, make sure you change your Linksys from the default settings:
- for the passwword at the setup page
- for the channel used for the connection

There may be another access point - a neighbor - using the same channel for access. Users tend not to change the channel setting - "1" is the default.

There are also cordless phones in the same frequency range.

Your problem with the baby monitor could also be interference from another monitor nearby, or a cordless phone. Anyone move in next store recently?

I have also seen reports from some radio hobbyists of interference from Linksys power supplies to radio equipment. Some of the newer Linksys power supplies have a filter in-line.

>> I have an 802.11b wireless network in my house; the access point is a Linksys DWL-1000AP. I also have a pair of baby monitors, made by Safety 1st.

>> I suddenly noticed considerable degradation in the performance of both of these devices. They continue to work, but the network connection is very spotty, and the baby monitor has lots of noise.

2311. Scanning in Houston

Newsgroup: rec.radio.scanner

Morning,
I've done some nice scanning in Houston the last week and will return to LA today. Listened to the airplane crash at the air show, the police special disp. and the fire and ambulance.
As to rail I am used to trains running all day and night on the coast to coast rails and there was "very" little rail chat here.
There is one group that uses a electronic disp. voice, that took some getting use to.
Thanks to those who helped me find freq.'s in the Houston area, I loaded them with Winscan 2.1 and was loaded and running in no time.

Does anyone have a timeline or chronological list of when Uniden released each of its scanner models?
There's a list for many brands on http://strongsignals.net/access/content/release.html but it only goes back to 1996.

just curious...

The Good Lord

Okay, now things are getting personal. It seems not only bushite soldiers murder our innocent families for no rational reason but to serve as enemies of God under the antiChrist, they now need to blindly forget about protecting the sacrificed family they almost know best as their stupid own. Who gives a fuck if bush wants to rob American tax payers a say in paying block grants to fix things they criminally break? See? This is why bush can't declare the money spent should be a loan, for then, someone might be held accountable. Billions have been already stolen from the UN's escrow account, while the central Iraq bank, has those heading it, likely directly involved in it's alleged current robbery. How else could the plan made prior succeed? Ha ha. It's almost like they imprison themselves on purpose for our benefit. ALL Americans are too weak as stupid they keep selling US. Now then, when's the fictional God King fellow, gonna make our entrance disguised as a simple man of few means, trying to get his show biz break in the international media under the fantastically named Johnny Wizard bill?

We, as, humanity, must make bush accountable for the criminal waging of our rights as Life. "Why blow up anything in Iraq", ask a mindless as DU poisoned bushite soldier participating in death squads to murder women and children? Our war crime perpetrators we need to raise our guns in defense to, are: buford blount, tommy franks, rumsfeld, bush, Condoleeza, and likely mueller. Remember: The FBI informed US that bush's business partner, (THE UNARRESTED) General Ahmad mastered 200,000 DOLLARS to give Atta, The 9/11 Mastermind, then, worked with Condoleeza to devolop the 9/11 Afghanistan plan. A TOP SECRET Presidential Directive reported on by MSNBC's Jim Miklaszewski. A DOCUMENTED plan of not following the criminal leads to arrest the actual perpetrators, to secure criminal invasion against the American flag waving, Taliban. Dated two days before 9/11 came down, and confessed to MSNBC in March by the White house, after deliberation, as fully implemented. Evil is just the deceived disguised, and there's really not much to fear of really like whatever. Evil is dumb. Always has been. Humanity, through our public media, often glorifies humanities worst malcontents, as have deft skills of persuasion, instead of our failed ability to simply challenge criminal transgressions like those

TRULY perpetrated by the bush demon for instance. Or
how about a soldiers word, not found as capable, but for
form letters to try and trick the family back home with
bush lies crying. Have you heard the true death count?
Who wouldn't defend their family from any irrational
proud bushite soldier, who as cowards, would murder the
practically defenseless and hungry, innocent and God
loving, like our family as our brother at Guantanamo,
while as traitors, fight to protect those responsible
for murdering thousands of New Yorkers? No instead of
protecting America, they spread radio-active toxic waste
on themselves, while fighting to persecute people not
guilty of any criminal offences. How weak and stupid,
can the almost fictional antiChrist really take a dying
America down counting for?

The ungodly bush demon demanded that evidence wasn't
required to arrest the 9/11 culprits, that he decided
instead, as planned before hand, with rumsfeld, would
war our undefended families to toll further criminal
sacrifices. Perhaps millions. Get bush for me please.

Johnny Wizard

--

It all seems pointless to his wife. ``Why is he
there?'' Graham asked Brown, lips trembling.

--

First of all, the point here is not that 170,000 items were stolen
from the Iraq museum, or that most American corporate media records
the losses, as only those that were stolen from the lobby; it is that
AMERICAN PLANNING was underminded by the demon bush "cabal".

The telephone exchange for example was blown up with several bunker
busters (DU weapons containing hundreds of pounds of toxic waste to
harm
all of Humanity) for no reason but bush's evil to steal life from God
and
Nature. (The Iraqi military had hydrogen generators, and can use walky
talkies instead of payphones.) Why blow up whatever in Iraq to murder
our families for demon bush to cash US out as traitor I ask You?

Second, microscopic DU is a TOXIC heavy metal, as poisonious to human
beings, and as light as the wind. Also, being radio-active, a single
particle breathed into the lungs, can mutate DNA. Similarly to outside
background radiation can externally, but at 1900 times the level,
internally.

2316. NORAD Activity now….

Newsgroup: rec.radio.scanner
Date: 2003-10-20 21:08:23 UTC
From: GeorgeF <av8tor@licensed4funREMOVEBEFOREFLIGHT.com>
Message-ID: <3F944EC7.9040603@licensed4funREMOVEBEFOREFLIGHT.com>
Source record: 25269

Been hearing some comms on NORAD freqs 234.6000 and 254.2000. Callsigns are: Widge 48, Oscar 2 Kilo, and CCF. These callsigns were calling Eglin and each other.

There was comms discussing an activity which either took place or is currently taking place ï¿½in the deep southï¿½. Widge 48 was trying to get permission to stay up longer (currently he was near Daytona Beach, FL).

Some comms were being broadcast on both 234.6000 and 254.2000 simultanisouly. Other comms seemed to be duplexed on these freqs with Widge 48 xmitting on 234.6 and Oscar 2 Kilo xmitting on 254.2000.

Also disuccsions of making contact with Eglin on HF. Anyone know what HF freq?

I started hearing these comms at about 1630 EDT and still going strong at 1704 EDTï¿½.

George ï¿½ Daytona Beach, FL

Innovative Web access to shock Manassas
SARI KREIGER
skreiger@potomacnews.com
Saturday, October 18, 2003

Manassas residents will soon be the first in the United States
to buy Internet access over city power lines.
The City Council voted unanimously on Thursday to
grant a franchise to Prospect Street Broadband, LLC.,
bringing a year-long preparation process to fruition.

Residents can purchase the service within 120 days of
the contract signing, which is expected to occur
next week, according to Energy Services Manager Brett Massey.
In May 2002, a small pilot group of city residents and
businesses began using the service. A modem is plugged into
the electrical outlet on one end, and the computer on the
other, to gain high-speed access to the Internet.
"They were very impressed by the speed, reliability
and flexibility," said Utilities Director Allen Todd.

Freda Wallace, an administrative assistant with Robert
Loveless Architecture in Old Town Manassas said the
company has been receiving the service since February.
"We've had good service with it," Wallace said. "The
only time it has been down is because of our
equipment, or because they're testing something on
the lines because it is a pilot program."

The Connecticut-based company that received the
franchise will be responsible for the equipment,
connection, monthly billing, advertising and
24-hour-a-day, seven-day-a-week customer
support. The city will expand the current fiber

network, which is almost complete, update optical
electronics and install and maintain equipment
external to the residents' homes.

"The grantee will be providing most of the capital
of this project and assume most of the risk," said
John Hewa, assistant electric director for the
City of Manassas. "There's very little financial
risk to the city."

John F. Berry, chairman and CEO of Prospect Street
Broadband, said the service is very easy to use and
no special training is necessary. Residents can purchase
the service and obtain access from any city outlet.
"You sign up once and you can sign on at home,
a friend's house, the ice skating rink, where ever," Berry said.

If residents opt for this Internet service provider, they will
pay approximately half of normal high-speed access, as
the tentative service price is $29.95 a month for
residents, and $69.95 for commercial access.
"It will be competitively priced and a quality service,"
said Vice Mayor Harry J. Parrish II.
Wallace said the service was comparable in speed to
any DSL program available. "It's very fast," she said.

And as a fringe benefit, the city can also monitor power
outages through this technology. Todd said the city has
been trying for years to achieve that capability.
Two bids were received on Sept. 8, and Todd said the
city spent a considerable amount of time examining
both proposals to ensure the best outcome for residents.
"We've never had a franchise quite like this before," Todd
said. "We wanted to make sure we had measures that
would protect the services we promise the citizens."

The contract that the council voted to approve calls for a
10-year term, with a five-year extension. A minimum
payment of $24,000 after the first year, and $124,000
after the second and third year is guaranteed to the city.
Initial figures project that Manassas could receive up
to $4.5 million in revenue after the 10-year period.
Councilman Ulysses X. White questioned city staff
about future price hikes, as he was reminiscent of
a similar situation with cable television in the city.
But Todd said with competition available, residents
wouldn't be stuck with high bills and no options.
Rather, this new offer gives residents exactly that -- options.

Councilman Eugene R. Rainville said residents will benefit
from an extra use of the electrical system their tax dollars already fund.
"Now they can get Internet at a low price," Rainville said.

"I would encourage all of our citizens to at least look at it as an alternative."
And according to Parrish, residents may receive an added bonus if enough people patronize this service. "It looks like the council might have the opportunity to look at tax reduction," Parrish said.

I have not had problems getting it to run on any computer. Before this
message
the only report I have gotten of someone not being able to get it to run was
by
someone who was attempting to use a scanner that the software does not
support.

I find it hard to believe that out of 28 people, none of you can get the
software to
work when I constantly get reports from people that have no problem running
the
software. ID Tracker runs flawlessly for days on my systems and I don't
think
that my systems are anything special. One system is a 1 GHz Pentium III
running
Windows XP and the other system is a 300 Mhz Pentium II running Windows 98.

The purpose for hitting F12 is to display the the debug window to reveal any
errors
that may have occurred. Not being able to communicate with the scanner is
usually a configuration problem. Since you did not state what error you
recieved
I cannot help with whatever problem you are having.

2321. Pro-95 current draw?

Newsgroup: rec.radio.scanner
Date: 2003-10-21 00:41:15 UTC
From: Ken <cprstn54zz@att.net>
Message-ID: <mvv8pv812ptgshk6f1dlp8snc16euph28o@4ax.com>
Source record: 25274

The manual says 90ma when squelched. What does it draw when it is scanning and there is audio?

I find that I drain four 1650ma NiMH batteries in around three hours. This corresponds to around 550ma, which seems excessive. Is anyone doing better?

I think usually get a little over 16 hours on 4 1700mAh NiMH energizers on my Pro93. I know it's a little different model, but I can't imagine the 95 would use up THAT much extra power. A set of chepo generic eveready AA's will get me about 8 hours.

I own a vertex vx10 VHF portable which I had programmed by the person I bought it from. I just recently had it re-programmed by a friend and lost a feature. When I used to key the mic, the radio would emit a quick "chirp" noise. It doesn't do it anymore and my friend cannot find this option in the programming software. Anyone know what this is??

2327. Heads up, Florida-Georgia for Cruise Missile Test Launch

Newsgroup: rec.radio.scanner
Date: 2003-10-21 05:25:58 UTC
From: allanstern@aol.com
Message-ID: <20031021012558.13877.00000632@mb-m29.aol.com>
Source record: 25280

USAF and Navy assets will participate in a Cruise Missile Test Launch tomorrow. As usual, it will be controlled out of Eglin's CCF. Look for them to use their usual freqs Tac 1: 254.2, and Tac 2: 234.6. Callsigns will be Widget 48 and O2K, controlled by Eglin's CCF.
The comms today on those freqs were a dress rehearsal for the mission tomorrow.
Tomorrow's comms should be heard over a wide area and for quite a while; many practice routes are flown before the "bird" is actually lofted. Typically the "bird" is lofted from a ship off-shore Florida's east coast, and it travels across peninsular Florida to a target on Eglin's test range. You will hear the acft "chasing" the bird and reporting coordinates through its flight, but the coordinate-positions are passed in coded symbols. There will be lots of comms (many more than today) because many more chase acft will be involved.
I will post the HF freq to be used tomorrow as soon as I confirm it.

You have a bad cell. Run the radio for a while, one will probably be
warmer than the others. I get 10-12 hours out of 1800ma rechargables,
with the volume about 1/3 up.

Another way to check the cells, is charge them all up, test each cell before use, then after when the scanner starts to show signs of slowing down.. The bad cell should show up. It may show up right off the charger, but if not, it sure will once put to use.
One way I've found bad cells, though not a guaranteed scientific method perhaps.... is when checking the cells out of a charger.. IF one seems to start dropping in voltage right away even if only a few tenths of a volt, it is usually the suspect cell. I've found many this way.

The scan current draw should be near the same or perhaps a bit higher than <manual> mode, no audio. But certainly not as much as when a signal is being received. Also, the current drain will also be greater as the volume is increased from minimum to maximum. IF you listen to the scanner at top volume, it will hasten the discharge. IF using it portable with no access to a charger to use as external power, use an earphone to enable you to hear it at a lower volume. OR you could make up a high current pack from a Camcorder or RC pack or something. The latter can be quite obnoxious in some cases but sometimes you have to have inconvenience to enjoy the conveniences (of having a scanner for hours). I can't speak for all manuals, but some do list the current rates for various modes. OR you could plug in a test plug set up to go through an ammeter off of a battery pack or power supply and test the current draws yourself.

2331. Trying To ID This Motorola Radio. Any Ideas, Please Help!!

Newsgroup: rec.radio.scanner
Date: 2003-10-21 19:37:27 UTC
From: JDUVA2000@aol.com
Message-ID: <4ea18955.0310211137.77c497d2@posting.google.com>
Source record: 25284

Hello All,

I am trying to ID this radio for a customer and am having no luck. The number off of the radio is P23SGB23F2AA, supposedly an older Motorola Spirit, Blue Dot Series. Anyone know of any resources I may be able to find on the web to ID this product or has anyone come across one of these?

Thank You for any and all HELP!!

Jay

Thanks to all who replied -- which (as usual) did not include Radio
Shack who I emailed.

I recharged the batteries in the radio -- a slow charge. The radio is
up to 10 hours and still going.

The three-hour life was what I was seeing after a fast charge of the
batteries outside the radio on a Maha C777 charger. Apparently, the
charger thought it was done when the cells were only 1/3 charged. But
that is another problem.

Ken

Hi Everybody

I'm looking for a ledsegment signal meter to build into uniden bearcat
3000XLT
It has 10 leds 4 green-4-yellow-2red. It is possible to build in in the
scanner under the speaker.
The print is made with smd components.
Does anybody know where I can buy this print.
Thanx a lot

Greetings Alan

San Francisco Bay area, you pick up.

PRO-2006 with Opto 456 board, Toshiba Tecra Pent I notebook,
registered copy Radio Max, outdoor discone antenna, cables, manuals.

Display dim but readable.

Computer CD does NOT work; is intermittent, but is otherwise perfect
for the scanner. Has floppy drive or use Lap Link with null-modem
cable or wireless card.
Battery is good, has 1.5 hour (measured) life.

$350.00

The Good Lord

Okay, now things are getting personal. It seems not
only bushite soldiers murder our innocent families for
no rational reason but to serve as enemies of God under
the antiChrist, they now need to blindly forget about
protecting the sacrificed family they almost know best
as their stupid own. Who gives a fuck if bush wants to
rob American tax payers a say in paying block grants to
fix things they criminally break? See? This is why
bush can't declare the money spent should be a loan, for
then, someone might be held accountable. Billions have
been already stolen from the UN's escrow account, while
the central Iraq bank, has those heading it, likely
directly involved in it's alleged current robbery. How
else could the plan made prior succeed? Ha ha. It's
almost like they imprison themselves on purpose for our
benefit. ALL Americans are too weak as stupid they keep
selling US. Now then, when's the fictional God King
fellow, gonna make our entrance disguised as a simple
man of few means, trying to get his show biz break in
the international media under the fantastically named
Johnny Wizard bill?

We, as, humanity, must make bush accountable for
the criminal waging of our rights as Life. "Why blow up
anything in Iraq", ask a mindless as DU poisoned bushite
soldier participating in death squads to murder women
and children? Our war crime perpetrators we need to
raise our guns in defense to, are: buford blount, tommy
franks, rumsfeld, bush, Condoleeza, and likely mueller.

Remember: The FBI informed US that bush's business partner, (THE UNARRESTED) General Ahmad mastered 200,000 DOLLARS to give Atta, The 9/11 Mastermind, then, worked with Condoleeza to devolop the 9/11 Afghanistan plan. A TOP SECRET Presidential Directive reported on by MSNBC's Jim Miklaszewski. A DOCUMENTED plan of not following the criminal leads to arrest the actual perpetrators, to secure criminal invasion against the American flag waving, Taliban. Dated two days before 9/11 came down, and confessed to MSNBC in March by the White house, after deliberation, as fully implemented. Evil is just the deceived disguised, and there's really not much to fear of really like whatever. Evil is dumb. Always has been. Humanity, through our public media, often glorifies humanities worst malcontents, as have deft skills of persuasion, instead of our failed ability to simply challenge criminal transgressions like those TRULY perpetrated by the bush demon for instance. Or how about a soldiers word, not found as capable, but for form letters to try and trick the family back home with bush lies crying. Have you heard the true death count? Who wouldn't defend their family from any irrational proud bushite soldier, who as cowards, would murder the practically defenseless and hungry, innocent and God loving, like our family as our brother at Guantanamo, while as traitors, fight to protect those responsible for murdering thousands of New Yorkers? No instead of protecting America, they spread radio-active toxic waste on themselves, while fighting to persecute people not guilty of any criminal offences. How weak and stupid, can the almost fictional antiChrist really take a dying America down counting for?

The ungodly bush demon demanded that evidence wasn't required to arrest the 9/11 culprits, that he decided instead, as planned before hand, with rumsfeld, would war our undefended families to toll further criminal sacrifices. Perhaps millions. Get bush for me please.

Johnny Wizard

--

It all seems pointless to his wife. ``Why is he there?'' Graham asked Brown, lips trembling.

--

First of all, the point here is not that 170,000 items were stolen from the Iraq museum, or that most American corporate media records the losses, as only those that were stolen from the lobby; it is that AMERICAN PLANNING was underminded by the demon bush "cabal".

The telephone exchange for example was blown up with several bunker busters (DU weapons containing hundreds of pounds of toxic waste to harm all of Humanity) for no reason but bush's evil to steal life from God and Nature. (The Iraqi military had hydrogen generators, and can use walky talkies instead of payphones.) Why blow up whatever in Iraq to murder our families for demon bush to cash US out as traitor I ask You?

Second, microscopic DU is a TOXIC heavy metal, as poisonious to human beings, and as light as the wind. Also, being radio-active, a single particle breathed into the lungs, can mutate DNA. Similarly to outside background radiation can externally, but at 1900 times the level, internally.

IMMEDIATE RELEASE
Oct 23, 2003
(703)697-5131(media)
(703)428-0711(public/industry)

DoD Announces Radio Frequency Identification Policy

The Department of Defense announced today the establishment of a Radio Frequency
Identification Policy (RFID). RFID technology greatly improves the management of
inventory by providing hands-off processing. The equipment quickly accounts for and
identifies massive inventories, enhancing the processing of materiel transactions to
allow DoD to realign resources and streamline business processes.

Implementation of RFID minimizes time spent through the normal means of inventory
processing. This technology allows the improvement of data quality, items
management, asset visibility, and maintenance of materiel. Further, RFID will
enable DoD to improve business functions and facilitate all aspects of the DoD
supply chain.

The new policy will require suppliers to put passive RFID tags on the lowest
possible piece part/case/pallet packaging by January 2005. Acknowledging the impact
on DoD suppliers, the department plans to host an RFID Summit for Industry in
February 2004. The RFID policy and implementation strategy will be finalized by
June 2004.

RFID policy and the corresponding RFID tagging/labeling of DoD materiel are
applicable to all items except bulk commodities such as sand, gravel or liquids.

Cross-posted to: alt.ham-radio.hf,alt.ham-radio.vhf-uhf,rec.radio.scanner,rec.radio.swap

I have a nice Icom IC-38A with manual but no box.
I am asking $250.00 plus a little for shipping from 01930 in Mass.

I have 2 Yaesu VX-1 for sale.One is missing the antenna.I have box and books on one but not on other..I do want to sell as a pair.I am asking $160.00 for the 2 of them plus a little for shipping from 01930 in Mass.

I have a Radio Shack HTX-200 2 meter ht.It takes 2 AA batteries to run it.Can be moded for out of band very easily.I have no box or manual but manual can be downloaded from Radio Shack site.I am asking $60.00 for it and a little for shipping from 01930 in Mass.

I have a Standard C-508A multi band ht.It also runs off of 2 AA batteries.I have box and manual on it.I am asking $90.00 on it plus a little for shipping from 01930 in Mass.

I have a Yaesu FTL-2001 mobile radio.I am not sure but I think it is a VHF radio.I don't know much of it as it was taken in a box lot of stuff that I got.I do know it does power up and keys up.It is well used and in rough shape.I do not have a box or manual for it.I will ask $70.00 plus a little for shipping from 01930 in Mass.

I have a Radio Shack Pro-2046 scanner for sale in great condition.It is being used now.It covers 800MHZ also has 100 channels.I am asking $125.00 for it plus a little for shipping from 01930 in Mass.

I have a 500 channel PRO-92 with computer interface.I have box and do beleive I have copy of manual.I am asking $160.00 for it plus a little for shipping from 01930 in Mass.

All of these radios are in great shape unless stated..
Most of this stuff can be used as swap if interested.

I am (my wife is)looking for a good digital camera to keep in my wifes pocket rather than her keep her Mavica.She wants to be able to take it where ever she goes in the car.
I am also looking for a high end Laptop.(1 gig or better for any trades or fair price.
Also looking for a fair priced Icom IC-706MK2G

I would entertain offers on these items.Please email me at n1rsp@qsl.net or call me at 978-281-3359
Thanks for looking.

Burr <3F97FE04.8030903@earthlinkpanties.net>...

^ DoD Announces Radio Frequency Identification Policy

Here's one implementation of RFID that I post for the description of the device:

<http://www.smartcardauthority.com/news1.html>
The ASK smart label combines a microchip and an antenna printed on paper with conductive ink to make a wireless device that looks and feels like a standard paper label. Using radio frequency identification (RFID) technology, customized readers can read and write data contained on the C.label chip. The printed antenna eliminates the need for a wire coil antenna and resonant capacitor, which greatly reduces the overall cost of the C.label compared to traditional RFID products.

I had a systems crash, and I lost all my info, and didn't have full back-up.

Would someone please post the two FCC frequency search sites?

TIA

Cool Dude, your smart.

I don't guess we can use any of this in DXing or Scanning.

^ Cool Dude, your smart.

Not me!

^ I don't guess we can use any of this in DXing or Scanning.

I don't know. My guess is that an RF transceiver sends a signal that activates the RFID device so that it will send a signal in return, which the RF transceiver then receives and logs. The RFID device's output power is probably well below a tenth of a watt so you'll probably have to be within a few feet of it to get a useful signal.

You can probably build an extremely low power transmitter that will activate these devices then walk around town listening for them with your scanner, but I don't think it would be much fun. In your case it might be a little more fun to place the transmitter, your scanner, a TNC, and a laptop computer next to 395 and scan vehicles for a couple of days. Its something to do in the desert.

Or you could wait until they start putting these things on ID cards and keep a record of everyone you meet! Then you could program your PDA to notify you whenever someone you know is nearby.

Frank

2368. FA: Vintage Regency Crystal Controlled Police Scanner Model # ACT-R-106

Newsgroup: rec.radio.scanner
Date: 2003-10-24 02:40:52 UTC
From: snooper <snooper@beer.com>
Message-ID: <CJGdnW-_y4aqDAWiRVn-vw@comcast.com>
Source record: 25320
Cross-posted to: alt.radio.scanner,rec.radio.scanner

On Ebay:

I'm getting rid of some things which have been sitting around too long
without being used.

This is a vintage Regency crystal controlled police scanner, model number
ACT-R-106. I acquired this radio from my Uncles estate after he passed
away. The unit powers up and scans through the different channels, however,
I do not have any crystals for this radio and therefore cannot thoroughly
test it. The volume and squelch sliders, as well as the speaker appear to
function properly, but without crystals, only static can be heard. The
overall condition of this radio is great considering how old it is.

Link:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3054308356&category=14956&rd=1

Ends: Sunday, October 26, 9.36 P.M.

Thanks,

Mike

Or could be "with cinnamon" as in

Detective is assigned to bring in suspect donuts into custody and "WC"
meaning "with cinnamon" donut suspects

2371. Search and Rescue: Southern California, La Paz Mexico

Newsgroup: rec.radio.scanner
Date: 2003-10-24 13:21:40 UTC
From: Frank <jvsjlwflbk@ujrcspaikenrryhm.com>
Message-ID: <01c39a31$bdd87360$0125250a@ujrcspaikenrryhm>
Source record: 25324

I heard an aircraft check in with Beaver Control on 120.85 at 2003-10-24 T1310Z (2003-10-24 T0630 PST) and report an IFR clearance to La Paz Mexico for search and rescue operations. I didn't completely catch the aircraft's callsign, something like "Rescue 1700".

I have no idea what the search is for and I don't know what other frequencies are being used, nor will I be pursuing this further. I pass it on in case someone does wish to pursue it.

I have a Yaesu FT757GX that has been opened up and will recieve and transmit over the entire fq range. It has a 250hz cw filter besides the standard filters. Have a mic and the manual somewhere too for it. Runs off 12VDC, this unit isnt a 10 but works great and has all the newer features you find in the latest transcievers such as the CAT interface,built in keyer,Besides the ham bands its full coverage.
I would like to TRADE for a wideband reciever or scanner like the R7000, VX7 or a table top scanner or.

Hi Group,

Here in FL we have the Sunpass which is an automatic toll paying transponder.

Does anyone know what frequency the data is sent out?

I have a unit here but there is no FCC ID number on the unit so I can not look it up in the FCC directory.

Also interested in the electronics, if anyone knows a site to visit?

Thanks

With the solar storm to hit earth on 10/24/03 I decided to try and take some pictures of our current sun spots. I used a 4 1/2" telescope and a digital camera. You can read how I did it and see the pictures at http://www.milaircomms.com/sunspots.html

So far it sounds like HF has been effected by todays solar storm. According to a local TV (WESH 2 Orlando) that some HF Aircraft Communications were effectedï¿½.

The 'old vertex' is a land mobile radio, and useable by businesses and
public safety agencies legally. The 707A, while perhaps modifiable,
would not be legal out of ham frequencies.

Why would the 707 not be legal on ham frequencies if modified ? Anything that transmitts on the ham bands and meets good engineering practices is legal in the US.

AOR AR 8200B 500 khz to 2.04 ghz (less cellular), original manual, ac adapter, earphone, both antennas, belt clip, wrist strap, 4 like new nimh batteries and charger, many pages of reviews and custom made random wire w/bnc connector (for improved hf reception). The last gentleman who wanted it has backed out of the deal due to unforseen employment problems.

This wideband receiver looks and operates as new.

Bottom line, $260.00 shipped/insured Continental U.S.

Beware of a person using the name Mike Alonzo with an address in McKees Rocks, PA. This person is buying radio equipment on eBay and then sending counterfeit, fraudulent cashier's checks drawn on Commerce Bank in PA.

The e-mail address he used is mike@unix.zzn.com

and his eBay user name is : mikealonzo

If anyone has had similar dealing with this guy, or more info., please contact me via private e-mail.

Dan

From my experience, PayPal has it's fair share of scams.
A lot of people using stolen PayPal accounts to try to pay for stuff, etc.
My friend once received an email that claimed it was from Paypal, he was smart enough to realize it wasn't. It asked people to "verify" their account, because they were deleting inactive accounts. Clicking on a link brought them to a website that asked for their user ID, password, even credit card number and interac pin number!!

My friend and I just sat there refreshing the .txt file all the info got dumped into (by looking at the source) and watched it fill up with legitimate credit card numbers and paypal accounts.

So put that in the guy's feedback file and report it to Ebay. Then no warning is needed here, everyone should check the feedback file before doing business with someone.

using the USPS money orders to pay for ebay items is a good way to
do it , but they take up to 60 days to refund the purchase price if
you need to put in a claim. (and have lots of refund conditions
etc.)

I have VERY successfully used convenience store money orders ....
7 -11 or Johnny Quick , etc. ... and had better experience with
them for getting your money back in the case of a scam. If you get
ripped off or scammed (on ebay , for example) simply filling out
the stub on those money orders ..even 2 / 3 months later than you
bought them , and sending it in to the address in a plain envelope
..... will get you a " no questions asked " refund in 7 to 10
days. Those companies have a VERY liberal policy for refunds ....
to keep their market share healthy .... and speaking from personal
experience .. I highly recommend them.

Paul <1067145515.755925@newshost03.voicenet.com>...

^ Is there an ONLIE scanner link in Real Time Audio
^ to this fire scene??

I don't know, but it would be only a very small part of the picture; fires generate a lot of traffic. The California Division of Forestry (CDF) starts out by assigning two frequencies to the incident: a command frequency and a tactical frequency. There are also about 10 fire units of various types that constitute the initial response. As the fire grows and more units respond, the incident commander might request additional tactical frequencies and logistical frequencies.

In addition to the assigned frequencies there are the air frequencies, RED, YELLOW, and BLUE, plus 10 VHF AM frequencies in the aviation allocation.

In addition to the CDF frequencies, other organizations, such as the U.S. Forest Service and BLM, will be using their own frequencies for internal organization, support, and tactics. Also, from what I've seen in the past, fire teams in the field may be using FRS radios for internal team communications.

So to effectively follow a major fire you need one receiver for COMMAND, one for AIR, one to cycle through TACTICS, two to lock on to other interesting frequencies, and two others to cycle through all remaining frequencies. And a couple more ears.

Frank

Ebay (Safe Harbor) doesn't care if you get ripped off or not as long as they get their piece of the pie.
Ebay want you/us to pay $20 to their Safe Harbor division and all they do is negiciate. The ending program is you will be out your money in the end. Now that's from experience. It took 5 months to get my money returned.

I had to go to the FBI to get a guy in Portland CT. to pay or be arrested and prosecuted.

Wrong Answer.

The USPS Inspectors Office could care less. I have a case open on a $493.00 Postal Money Order Fraud that has been open since 12/26/2001. I even arranged another purchase from the same guy where another forum member met him in person - one block from the postal inspector's office... The Postal Inspector assigned to the claim couldn't be bothered to go one block to witness and apprehend the perp.

These guys are government employees; all they do effectively is mount ad campaigns and make Hollywood movies bragging on how good they are. Other than that, Krispy Kreme is the only entity that can rely on them.

Here's a review I did of this product:

For the advanced radio hobbyist or communications professional, this
device can be very useful. It does not replace your scanner, rather it
is used to gather information, and to tell you what is going on in
your immediate area. You need to be close to the source of the
transmission to get a reading, but once you have the information, you
can program it into your scanner and listen from a distance.

You can be looking right at somebody talking into a microphone, but
unless you know the frequency (or at least the frequency range) that
he is operating on, a scanner alone would be useless in picking up the
call. With the Xplorer, you immediately hear what is being said, and
the display gives you the frequency and signaling information (ctcss,
dpl, ltr trunking, and dtmf).

For those who do not have a thorough technical knowledge of radio
communications operating principles and spectrum utilization,
purchasing one will probably lead to frustration and buyer remorse.

Two questions, you receive a signal on 822.15 MHz. Do you know that
this frequency is only used as a repeater input, and that the actual
frequency to program into your scanner is 867.15 MHz? You're near a
police station, and the Xplorer locks onto the dispatch channel on
920.7 MHz. Do you know that police would not be operating on 920.7
MHz, and that what you are hearing is most likely the second harmonic
of 460.35 MHz? If you did not know the answers to these questions, and
most scanner owners would not, then it would probabaly not be to your
advantage to add this rather expensive tool to your monitoring system.

I ordered mine in May 2002, and after a three month backorder, I finally received it. I opted to buy a new unit because of the features recently added, and the price being reduced. It can pick up a 40 watt mobile from blocks away, but it does not do well with low power devices (cordless phones, fast food headsets). I have found a few fast food places it will pick up. All are on the same freq and tone, 457.5125, 71.9. One was a Taco Bell, another a Wendy's, others I didn't stick around long enough to identify. This equipment must have a significantly higher output power than the rest. Oh well, I'm a lot more interested in operations like event security at sports arenas, and the Xplorer does a fantastic job at identifying these hard to find frequencies.

If I had the purchase to do over again, I would have gone with a Digital Scout. I'm very disappointed that auto store will only store the frequency. PL, DPL and DTMF are only kept when you manually store them. Since it can sometimes take quite a while before anyone transmits, to hang around and stare at this little black box in your hand is simply not practical. Leaving it in the car or briefcase, and reviewing the stored information later, is the way to do it. And in this repect, the Xplorer is little better than a storage frequency counter. I am also not pleased with the lousy battery life, and the fact that the program to download information from the device does not work.

By now, the crook has undoubtedly reregistered with ebay, and is
continuing the ripoff with a new username.

Thanks Dan, for alerting us to be carefull of people bidding on radio
equipment from McKees Rocks, PA, and wanting to pay by cashier's
check.

I'll 2nd that, I also have a USPS claim, the Inspectors could give a flying f**k less about prosecuting scam artists. I always thought US Postal Inspectors carried a good amount of weight against ripoff artists, now I know better. Unless you rip of the government, they could care less and won't lift a finger to help.

Both ebay and PayPal tell you to FORWARD, un-edited, the complete e-mail to
one of the following:

spoof@ebay.com
spoof@paypal.com

They will verify your forward, and, later, verify whether or not the
suspicious e-mail originated from them or not (I've never had an affirmative
verification).

Not Missile tests, you'll find them published well in advanced in NOTAMS (depending on the missile's course). Also all the comms leading up to a missle test as well as the day of the test are 99.9% in the clear on the standard Mil freqs....

And when you think about it there really is no reason to classified a cruise missile test. Plus if I"m flying anywhere near the route of a missles path during a test I DO NOT WANT IT CLASSIFIED! And the route of cruise missile tests here in Florida generally take paths through air space typically used by General Aviation planes....

```
Changes since Version 2.6.2:
a.. Added support for the PRO-2052 (limited).
b.. ID Tracker now preserves the ID activity list between sessions.
c.. Added support for Control Channel Only mode trunking.
d.. Added the option to periodically save data to prevent information
losses.
e.. Added peak indicator to signal meter.
f.. Added Quick Reference display.
g.. Added audio sample rate setting.
h.. Added descriptions to audio file list.
i.. Corrected some display issues when identifying IDs.
j.. Added checks to prevent duplicate IDs in a bank.
k.. Corrected problem with resetting hit counts for frequencies.
ID Tracker web page:

Hi!

May i recommand you to subscribe to the "scanont" Yahoo Group ?
Even though i'm a Canadian, i live very far from Toronto but i
really appreciate all the knowledge and mass of information i can
read from the guys exchanging info in this groups.

Go to "groups.yahoo.com" and type "scanont" and then subscribe
to this group; You'll receive the discussion via email if you
wish, but will be able to access the group's freqs lists on Yahoo
Groups.

Good luck!

I just bought a Radio Patrol 2002 from greatbuyusa.com . I get the thing, no box. It looks like it was not new because it had cosmetic wear on it, and the thing doesn't even work.

2438. Dallas / Ft. Worth and North to the Red River Scanner Frequencies

Hello all,

I was wondering if anyone out there might have any listings of scanner, HAM, etc frequencies for North Texas from Dallas North to the Red River into Oklahoma from anywhere along IH 35 and US 75?

Responses can be sent to the group here or emailed to drestinblack32@hotmail.com. TIA!

Rich

When I did the research in Aug 2003, this is what I found:

Uniden BC 785D Prices

329.00 - Uniden Online Store (www.uniden.com) - Reconditioned and currently Out of Stock
332.00 - Hobby Radio Stop (http://www.bearcat1.com/scannerz.htm) - $9.00 shipping.
339.95 - National Electronics (www.national-electronics.com) - Shipping to my location is $11.98 Ground Residential, $19.58 for 3 day, $25.86 for 2 day, and $48.49 for next day.
349.95 - ScannerMaster (www.scannermaster.com) - $9.95 shipping via Priority Mail/UPS
349.95 - Lentini (www.lentinicomm.com)
359.95 - Ham Radio Outlet (www.hamradio.com)
359.99 - Amazon.com (free shipping w/ Super Saving Shipping)
359.95 - The Ham Station (www.hamstation.com)
362.98 - Buy.com
364.99 - Advanced Specialties, Inc. (www.advancedspecialties.net)
369.95 - Grove Enterprises
369.95 - Communications Electronics, Inc. (www.usascan.com)
369.99 - Amateur Electronics Supply (www.aesham.com)
399.99 - GadgetDigger.com

Does anyone know how to program this radio? I picked it up off ebay it
works great. I allready have a faint signal on one of the channels!
If so email instructions unless it's a binary code progammed radio
(like the Tennelec MS-2).
I also had a earlier posting lookging for manuals and or schematics
that a few replied to with emailed responses. My computer crashed and
lost all responses.
If you could resend me the replies. For Marvin Moss, I lost your
contact info, could you resend it to me so i can send out out payment?

I've forwarded emails from bidders trrying to use stolen credit cards to ebay, and left feedback saying that they were from Indonesia and using stolen credit cards, but it still seems to take ebay just long enough for the guy to actually rip someone off before the account is deleted.

If you have not already, you really need this link for frequencies related to DFW.

http://www.lcblanton.com/dfw.htm

There's also a Yahoo group called DFWSCAN where we swap freqs for the DFW and surrounding areas. If you have not had a chance to visit the site, I think you will be impressed with all the available resources. Also, join the Yahoo group if you can...

I have a nice Icom IC-38A with manual but no box.
I am asking $250.00 plus a little for shipping from 01930 in Mass.

I have 2 Yaesu VX-1 for sale.One is missing the antenna.I have box and books on one but not on other..I do want to sell as a pair.I am asking $160.00 for the 2 of them plus a little for shipping from 01930 in Mass.

I have a Radio Shack HTX-200 2 meter ht.It takes 2 AA batteries to run it.Can be moded for out of band very easily.I have no box or manual but manual can be downloaded from Radio Shack site.I am asking $60.00 for it and a little for shipping from 01930 in Mass.

I have a Standard C-508A multi band ht.It also runs off of 2 AA batteries.I have box and manual on it.I am asking $90.00 on it plus a little for shipping from 01930 in Mass.

I have a Yaesu FTL-2001 mobile radio.I am not sure but I think it is a VHF radio.I don't know much of it as it was taken in a box lot of stuff that I got.I do know it does power up and keys up.It is well used and in rough shape.I do not have a box or manual for it.I will ask $70.00 plus a little for shipping from 01930 in Mass.

I have a Yaesu Vertex FTL-7011 UHF FM that operates great and looks good.I am asking $225.00 Or BO for it.I have no manual or box.Please add a little for shipping.

I have a Radio Shack Pro-2046 scanner for sale in great condition.It is being used now.It covers 800MHZ also has 100 channels.I am asking $125.00 for it plus a little for shipping from 01930 in Mass.

I have a 500 channel PRO-92 with computer interface.I have box and do beleive I have copy of manual.I am asking $160.00 for it plus a little for shipping from 01930 in Mass.

All of these radios are in great shape unless stated..
Most of this stuff can be used as swap if interested.

I am (my wife is)looking for a good digital camera to keep in my wifes pocket rather than her keep her Mavica.She wants to be able to take it where ever she goes in the car.
I am also looking for a high end Laptop.(1 gig or better for any trades or fair price.
Also looking for a fair priced Icom IC-706MK2G

I would entertain offers on these items.Please email me at n1rsp@qsl.net or call me at 978-281-3359

Thanks for looking.

Cool radio, for the curious, here's a picture:
http://scanpix2.home.att.net/BC/bc101.jpg

Let me know if this helps: http://www.scanshack.com/bc101.htm

Also from: http://home.hvc.rr.com/bpetrow/

"Bearcat 101
I won an Ebay auction for a lot of ten scanners recently and two of them
were Bearcat 101's. These are great old scanners but they needed a little
work to restore them to full operating condition. From what I have been
told there was never a service manual produced for the 101 so I put
together all the info I could find into a document package. This is a
large file (2.2MB) containing schematics, board layouts, operator's
manual, and a repair guide. The IF alignment procedure has been taken
from the Bearcat IV manual and updated. The original procedure was
incomplete and it referenced test point numbering for the Bearcat IV
rather than for the BC101."

http://home.hvc.rr.com/bpetrow/BC101.zip
http://home.hvc.rr.com/bpetrow/align.zip

Links referenced to in above paragraph.

Looks like a great find, it would be interesting to learn to use. Unlike
anything I've seen before.

Regards.

Very strange. I, too, had a gentleman from England offer me a third party cashier's check for $5000 for a $1500 rig I was trying to sell and he wanted me to send the difference to him along with the rig. I even answered him with "no deal".
Boy, was I stupid to even answer him like a gentleman.

From: "Ryan, KC8PMX" <REMOVETHISkc8pmx@diamondcs.net>
Message-ID: <bnodb5$13u4j4$5@ID-189073.news.uni-berlin.de>
Source record: 25164

Actually.... unless you get into building a really complicated multiband antenna for that far of a spread, my guess is to build one somewhere about halfway, like around the 400-500Mhz range.

To build a single band antenna, it will work well on the frequency it is designed for and probably work fairly decent on the bands that are multiples of that frequency. Other frequencies would probably work but with some diminished performance. Check out the Arrl Antenna Handbook for a good source of a variety of antennas. Or try considering purchasing one from Radio Shack or many other retailers like www.aesham.com or do a search for ham radio outlet which is another retailer.

Good luck!

Any owners of an IC R3 have any comments about scanning for video monitors.
I'm thinking of getting one and curious if it is worth the cost. Cams on
race cars, news crews, etc all seem interesting as do security cams in
buildings etc.

Are there always a bunch of nitwits like you guys that like to make trouble
on these NG,Or is it second nature for you to start putting others down?All
you are doing is using up bandwith making your stupid remarks.

If you are not interested just go on your way and let others get in who may
want something.Remember just because your wife or girlfreind nags you,You
still won't have the last word.Have a nice day.

Hmmmm..... I musy be getting thick in my old age. If you wait until the
cheque shows up, have the cash in your hot little hand, then the radio
gets sent out, where's the scam ??? Now if you were to ship first and wait
for the cheque.......... more fool you :) !!!!

Two questions, please:

1) What are the Base freq/Offset/and Step size MHz settings for the DCPD 460 MHZ system?

2) When will the DCPD go to their 800 MHz system?

Will be in the DC area the 1st of Dec. and want to know what to monitor.(Have pro 96 digital scanner)

Thanx

Dusan, YT1DL
Your Sony ICF2001 most probably has a blown rf amplifier . It is a FET on
the Jack board of the radio.
U can trace the input lines from the external and internal whip antenna to
find the FET. For some reason the designers did not diode protect the input
RF amp against static discharges into the antenna system..
Replacements can just about be any FET of the same type. Radio Shack here in
the USA sells several for less than $3.00 that work fine..

It is a large stinky piece of Crap! I am glad I was able to unload mine.
Steer Clear.
It in no way picks up anything except TV. Although I did hit a news cam
barely, briefly.
No way will yu ever pick up a security cam, or a 24 gig cam.

Just don't even step into that.

I have the Scout. It is used. I took care of it. I sent it into
optoelectronics for a new battery.
When I got it back I dropped it.

It works fine, but the LCD is dim. Wiggle it right and the LCD turns on
full again.
OTherwise it works just like new.

I called to find out what the repair cost would be. They asked some
questions over the phone and we proved that nothing is broken - just a loose
solder joint.

I am not a solder guy, plus I have an Xplorer. I don't want to fix it. I
want to give it to you. I have a wonderful ebay record.

Who would like to take this Scout and make a princess out of her again?

I read awhile back the most interesting things to monitor, are
frequencies ABOVE what the 'R3' is capable of recieving, and it also has
a lousy battery life.

I have the Bonito RadioComm software for it. Not impressed by it or the
[eople that prduce it. They seem to have very liitle appreciation of customer
service. I have tried Talk PCR which is decent. But odly enough I seem to end
up back with the stuff that came on the floppy from ICOM. It's kinda clunky
but it does what I need it to do. At the moment I use it mostly as a scanner
and for searching out local frequencies. I would like to try the Sky Sweeper
software, but their demo does not function until registered and paid for. It
only does simulated functions using recordings (very clunky). I refuse to pay
first and try later. The receiver I really like, I just haven't had time to
explore its capabilites fully as of yet, but I've only had it for about 2
months :)

I might also add that there is some trunk tracking software available that
will at least revoce the data from the control channels on a trunk system,
but it does not actually follow any particular group or conversation at
present. However it is early days I believe in it's development. You can fid
it at:

http://104452.home.icq.com/trunkpcr/TrunkPcr.html

You can also use it for conventional operation, but I find either the ICOM or
especially the TalkPCR program more useful for HF listening :)

I agree, Bush is on a roll, he's not running it perfectly, but is ANYONE perfect? I cannot imagine any of the nine bozos taking his job next year. HOWEVER, someone else could show up, 'at the right time' and challenge Bush for the Presidency. History has a funny way of showing us CONSISTENTLY that the most famous and infamous leaders can rise from obscurity.

Lew;
If you have one of the new PRO 96 Digi Scanners, you already
have most of the fequencies that you'll need to scan around the DC
area. Using the 'PRO-96 Preloaded Data Addendum' booklet that comes
with the scanner, load V-Scanner # 6 and you'll have the DC Fire and
police freqs in bank 0 (Fire is on the Digital Trunked system, and the
PD are still on their old 450MHz range radios, but they're all in the
PRO-96). You'll also get Mongomery Co, MD (Bank 1), Alexandria, VA
(2), Arlington, VA (3), Fairfax Co, VA (4) and other local areas.
Once you're here and turn on the scanner, it will never go quiet,
there's always some action going on around this area. If you set up
some search scans in the 160-170MHz and 406-420MHz ranges, you'll also
get plenty of hits from the, too many to mention, Federal Agencies
around here.

This area is the Radio Hobbiest's mecca!

For the record, IMHO, the PRO-96 is one great scanner,

Cheers...Dave

http://myscannerpage.com/ada.html , "Ada County Frequency List," ought
to have it, but I didn't see it right off the bat. Is the licensee
"Treasure Valley Transit," or could the licensee be the City of Nampa
or Ada County, for examples?

The site's owner has his e-mail address at his website. His site links
to
http://www.sierrathunder.com/ham/freqs.shtml , "Boise Valley Scanner
Frequencies." Again, nother there looked to be what you were looking
for.

You know, it's the same 1% of idiots who read the group and say
"awww.. my mudda wud luv dis.." that keep shit like this circulating
and clogging up our mailboxes too.

Rather than complaining, you should help think of a way to kill that
1%. Like, "Ladybug opens her wings to reveal a SPRING LOADED CURARE
DART SHOOTING STRAIGHT AT YOUR EYE!"

Im going to be installing a Larson KG450UDPL 450-470mhz glass mount antenna on my 2004 Dodge Ram pick up and i was wondering if anyone knew the best spot to place this antenna. I have read about glass with tint causing problems.The rear window (where i want to put it) has a light tint,how will know if this will make my antenna performance suffer? Are some tints worse than others? I hate to stick it there and have not work then have to scrape it off. The windshield is clear but who wants an antenna on the windshield?

Thanks alot Dan9125@aol.com

Put it in a corner or in the middle behind the rear view so you won't see
it. Although a slight tint shouldn't make much difference.

---> My reply to what Alex Devlin wrote 10/31/2003 2:58:46 PM

I found that you can not always tell by the darkness of the tint what the metal content is. I ran into problems when I installed a GPS in my SUV and was killing it every time I transmitted on the rig. After a lot of searching I found out that the metal in the window was causing a problem. Not only that but also about 3db loss in the system.

You might be able to check the SEA number on the glass and do a search on the web to find out what the tint is.

I ended up pulling both glass mount antennas off, finding a way to use a standard mount and would never go back. The improvement was very noticeable and the GPS reset problem went away.

2514. What other digital signals can I monitor?

Newsgroup: rec.radio.scanner
Date: 2003-11-01 07:49:58 UTC
From: Boris Gjenero <enosys_at_yahoo_dot_com@no.spam.ca>
Message-ID: <vko6qv89tcthftrvbajhou0i8mrfk4ntuv@4ax.com>
Source record: 25117

Recently I've been looking into what sort of digital signals I can monitor with my scanner and computer. I'm in Windsor, Ontario, Canada, near Detroit, Michigan, USA.

I've monitored POCSAG and FLEX with PDW software. That's easy. There are *lots* of frequencies, they're easy to find, the decoding is reliable and there's a lot of stuff being transmitted, including a lot of text.

Then there's MOBITEX. There are a few of those frequencies just below 940 Mhz. They are easy to find, the decoding is reliable, but the vast majority of messages are encoded or encrypted or something, only containing the text PCMIME or PCICAL. Is there software to decode these?

ACARS is pretty simple to monitor too, though the messages are often difficult to understand and actual english text messages are very rare.

There's another pager format at 940.225, but PDW doesn't decode it well and I don't see any cleartext.

I tried to find MDT frequencies for use with MDTMON but I wasn't able to. Some things sound a lot like MDT but nothing happens in MDTMON.

I'd love to decode SSTV but my scanner doesn't go below 25 Mhz and there's nothing on the SSTV frequencies above that.

Same with weather satellites... nothing... though perhaps my dipole antenna isn't good enough.

The software I found can do RTTY and various other text formats but that's below 25 Mhz generally.

What else can I monitor?

I have used the Larsen dual band glass mount on several vehicles I have owned over the years. The latest is my Toyota Tacoma king cab, I mounted it on the rear driver side window which has tint. The SWR on both bands is flat and the thing performs fantastic. Check to see if you may have problems with whatever the tint is made from or contains before you slap the thing on. As far as placement goes that is really a preference thing, I mounted it on the small side window because if I mounted it on the back window I would not be able to open the sliding window all the way on one side. I have had this antenna on this vehicle for at least 5 years and it still is a great performer.

Good luck

I've ran it on Win95, Win98SE2, WinME, Win2000 and WinXP and it
works great on all of those OS's... Even with a USB Adapter...
If your scanning a 800mHz system, try switching to the "Splinter" setting
under the Trunk/System Menu...

Regards,
Jay

If you want a list of the subchannels (PL tones) and how to translate them to a frequency
in Hz, go
to www.hamsrus.com/frsfreq.html and scroll down a bit . If you have a ham radio or scanner
with tone
squelch, you can set it to listen to only that frequency, you just can't reply.

I have a Radio Shack Pro-96 Serial #C012995 Catalog # 20-526 that I wish to sell. It is in pristine condition and complete working order. I've decided I don't need the digital capability in my area for the things I listen too, it was mostly an impulse gadget purchase! Used a total of a few hours. Your gain. Monitors the Michigan State Police very nicely at 9600 in my area! This radio is just starting to show up in stores, why wait, you can have one now and save a few bucks!

Here is what is included and it's original value:
$499.99 + tax Pro-96 with all the original items it came with (Unit, Antenna, 2 battery cartridges, manuals and original packaging)
$5 Fresh set of AA Alkaline batteries
$30 Win96 programming software (fully registered and transferrable)
$15 2-way programming cable
$0 Slip showing date purchased and amount (for warranty)

$580 Total paid with tax

Im asking $520 firm + $10 (USD) Shipping and insurance to Continental US (more to Alaska and Hawaii). I will accept US Postal Money Order or Cashiers Check.

Thanks,

Tom Howley

Can they be scanned? Is the Pope Catholic?

Carry a handheld scanner the next time you go to a major flea market, or any where many people may wish to coordinate with each other using FRS radios.

FRS radios use CTCSS, Continuous Tone Coded Squelch System. The intent of CTCSS is to allow people using a common channel to be able to ignore communications not concerned with them.

CTCSS Explained: http://mmi-comm.tripod.com/pl.html

In other words, if there are 14 Channels, they each have 38 Privacy Codes (CTCSS Tones). Assume you're on channel 8, Privacy Code 10, someone else in your area is on channel 8, but with Privacy Code 15. You won't hear their communications, they won't hear yours. BUT, since you are both on channel 8, if you would transmit at the same time as the other person, and the other person was nearby, even though you have different Privacy Codes, you likely would interfere with them, they with you, or you both would experience interference.

When using a transceiver with CTCSS, one would commonly use the "monitor" button to temporarily suspend the use of the CTCSS Squelch entirely, and if the frequency is clear, you would hear static. At this time initiation of the desired transmission could be started.

Using a scanner is the same as using the monitor button, allowing you to hear what is being transmitted on the frequency in question regardless of the Privacy Codes.

All you need to do is to program the 14 Frequencies into your scanner and scan away. The Privacy Codes won't be a concern, the people using the FRS radios won't have "Privacy", and you'll hear what they say.

I live in Pittsburgh Pennsylvania U.S.A., Remember CB, the vulgarities and such? FRS has taken over for this here, kids talking about wanting to F--K some other kid's mother (used in a degrading sense), using F--k continuously, and overall having reduce the FRS service in the city, at times, to a useless prospect.

But FRS does come into it's own at times, and we use them every year while vacationing at a Pennsylvania Park.

Some of the "over the counter" radios now in stores are actually GMRS radios, (General Mobile Radio Service). Though these radios require a license to operate, and in teeny tiny print somewhere on the box or in the instructions, or both, this licensing requirement is asserted. Problem is that few actually license their radios, they give them to children, the children abuse them, and the people that are licensed to use their GMRS radios are finding the service less useful. GMRS radios can use greater power and have external antennas.

You may wish to scan for the GMRS frequencies as well, 7 of the frequencies are shared with FRS anyway.

http://www.g-m-r-s.org/index.htm
http://www.g-m-r-s.org/frequencies.htm

Some scanners now use CTCSS, I have 2 that do, such as the Uniden 785D and a Yaesu Transceiver VX-5R. Though they have this feature, they can be used with conventional squelch as well.

And by the by, I believe that some FRS manufacturers are using scrambled or encrypted transmissions now, so you may not be able to understand what you are receiving. I believe that these radios are rare as of yet.

See "Private Call® voice scrambling " at this page:
http://www.durhamradio.com/cobra-frs-radios.htm

Regards.

The RS *looks* like a Diamond, but in typical RS fashion, it's a cheap knockoff
of inferior construction. (Remember the old CB days when RS antennas looked
like Hy-Gains, but fell apart in the first ice storm?)

Spend the extra $20 and get the Diamond. You'll be glad you did.

Joseph;

Do you have a 'police/fire radio scanner' or are you referring in your
post,
"I have one of this with 14 channels (38 sub channels).." to a Family Radio
Service(FRS)
transceiver and are you asking if a FRS can scan the fourteen (14) channels
and/or the 38 CTCSS tone codes?

Some FRS transceivers are able to "scan" the channels just like a police
radio scanner
and they may also search for the 38 sub audible tone codes CTCSS..

I haven't herd the CTCSS tone code feature used that much on Family
Service Radio channels. However the GMRS folks make extensive use of CTCSS
for repeater control access and to share the frequencies with each other.
FRS may keep CTCSS turned "off" so they can
talk to other FRS and GMRS folks they may meet at larger events or while on
the road.
Or it may be they don't have a clear understanding or need for CTCSS. Many
lower priced
FRS do not have CTCSS.

Several higher priced FRS transceivers can use Digital Tone Coded
Squelch . Which is used with some higher priced police radio scanners also.
The Uniden BC 250 D has the 14 FRS channels preprogrammed into the it's
search feature! You can program them into a bank in
any radio scanner with frequency banks, then when you see FRS users just
bring up that bank!

The Day That the Rains Came Down the Fires WENT OUT!!!

Thank you Lord.

A lot of people lost a lot so we could enjoy our wonderful scanners.
I sure enjoyed listening to all the fire and police chat related to the
fire. I got in on all three of the big fires from the very start and the
Simi Valley fire was a little far away for me to get a lot of info.
I also got to hear the morning fire meeting between the chief's as they
planed their day.

Thank God I was not in or very close to the fires, it was like a war
zone where I did get close to the fire. People were eating and sleeping
in cafes all over the Inland Empire.

2538. FS: Pro-96 Digital Scanner by Radio Shack: Revised

Newsgroup: rec.radio.scanner
Date: 2003-11-02 18:08:48 UTC
From: Tom Howley <pro96@homeaddress.us>
Message-ID: <SKadnZTt4t_y1TiiRVn-jg@comcast.com>
Source record: 25141
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap

In my haste, I posted an early revision of what is included for the price. Note the correction of NI-MH batteries and the price have changed. Thanks to all those who have enquired or commented!

I have a Radio Shack Pro-96 Serial #C012995 Catalog # 20-526 that I wish to sell. It is in pristine condition and complete working order. I've discovered I don't need the digital capability in my area for the things I listen too. This was mostly an impulse gadget purchase! Used a total of a few hours. Your gain. Monitors the Michigan State Police digital system very nicely at 9600 in my area!

Get yours now and save $100 bucks over retail with one-stop shopping for the entire package!

Here is what is included and it's original value:
$500 Pro-96 with all the original items it came with (Unit, Antenna, 2 battery cartridges, manuals and original packaging)
$20 Ni-MH AA Rechargeable batteries
$30 Win96 programming software (fully registered and transferrable)
$15 2-way programming cable
$0 Slip showing date purchased and amount (for warranty)

$600 Total paid with tax

Im asking $500 + $10 insured shipping to continental US. I will accept payment by US Postal Money Order (preferred) or check (held until cleared).

Thanks,

Tom Howley

2542. Added more military radio manuals to my FS list

Newsgroup: rec.radio.scanner
Date: 2003-11-02 22:20:57 UTC
From: tomg@fullnet.com
Message-ID: <11915d6.0311021420.703739d7@posting.google.com>
Source record: 25145

I have added more radio service/maintenance and operator's manuals to my list of manuals that are for sale, at:

http://www.fullnet.com/u/tomg/manuals.htm

More military radio manuals have been added, too, such as:

RT-246/VRC, RT-246A/VRC, RT-505/PRC-25, RT-524/VRC, RT-524A/VRC, RT-841, R-390/URR, R-390A/URR, AN/PRC-25, AN/PRC-68, AN/PRC-77, AN/PRC-126, AN/VRC-12, AN/VRC-43, AN/VRC-44, AN/VRC-45, AN/VRC-46, AN/VRC-47, AN/VRC-48, AND AN/VRC-49.

I also have service/maintenance and operator's manuals for: electronic test equipment and other electronic equipment, surveying/surveyor's equipment, weapons, binoculars and telescopes, and more.

Same day shipping. And some are same-day-Emailable.

For ordering information and payment-method options, etc, go to the website above.

Thanks for looking.

Regards,

Tom Gootee

Thanks for yuor help. Microsoft offered a new audio drievr yesterday form AC97 on board audio. I am now at least decoding control channel data and actually tracking mobiles :) Problem seems to have been the audio drivers, because after I updated them at Microsoft, the computer began to decode control channel data and track communications. I notice that the Groups and radio counts are no incrementing, are they saved automatically and how do I edit the file containing this information ???

Well I got my Scanner World catalog this week and they are taking pre-orders
for the above units.
However, I went to Unidens site and there is no mention of these models
anywhere. Not under scanners and not under press releases.
So what is really going on with these new models?
Scanner World also states they are pretty much the same as the 785/250
covering EDACS/LTR & Motorola, but include the digital card.
So I guess we won't be able to monitor M/A Com or Multi-net comms.

<sigh>
A little common sense goes a long way...like using a seperate card with a
very low limit for paypal, then follow up on ALL transactions. The
particular card I have I call the CC company every time I use it so they
know its me. If I *don't* call them first, they are calling me within the
hour asking if I have authorized the use of the card.
Its very comforting to know that one way or the other BOTH the bank and
myself know that the card is being legitimately used.

Bill Cheek lied to us again. He did not die a few years ago as was believed by many.

He faked his own death, to avoid his impending legal problems and get donations of money from supporters. Bill then started making his living in the gambling field. He did eventually die of the cancer he had.

In truth, he died this last march, as seen in the message below from rec.gambling.poker

What are the reviews for the '96 anyway, I haven't seen any yet. Is it worth getting? What are the Pros-Cons of this scanner? Is this the best Scanner of it's type? For it's price, it better damn well recieve just about EVERYTHING.

2553. Frequency counter range query

Newsgroup: rec.radio.scanner
Date: 2003-11-03 08:19:31 UTC
From: byrnefm@yahoo.ie
Message-ID: <30a527b1.0311030019.5eadab03@posting.google.com>
Source record: 25006
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hi,

I recently bought a frequency counter, the Watson FC-130 and know from various postings and the little info I could find about freq counters in general that their range of coverage is quite limited. The sheet that comes with mine mentioned that (for example) cordless phones can be picked up to 12" away. However, when I tried my frequency counter against my own analog cordless phone, it would only pick up the phone (when switched on) up to about two inches away.

I'm just wondering, is this typical (ie. is the supplied leaflet giving 'best-case' scenario only)? I've walked within ten yards of the local church which broadcasts its services on the CB band (2 miles listening radius) but didn't lock on to any frequency, even when near the back of the church (and could see the antenna on top of the church). I haven't been around anyone with walkie talkies yet to try the counter against those.

I don't know anyone else with one locally so can't compare results.

Thank you for any advice in advance about this!
..Francis
Dublin, Ireland

OK. Do you have any advice for example: I'd like to scan one gsm number.
When line is on then i'd like to see callers/receivers number and record
voice. Sms too.

Does equipment for something like this is on market? If it is please tell me
much more about it.

Thanx

Hura

> Watson FC-130

I think the Watscon FC-130 is manufactured in
Taiwan by Aceco.

I tested 2 different Aceco-made counters in
Monitoring Times magazine:
an MFJ-886 and Aceco FC-2002. Both counters
were able to display a 49 MHz cordless phone frequency
only when they were within a couple of inches of
the phone's antenna.

They were able to display a 5 watt 146 MHz walkie-talkie
signal a 261 and 185 feet away, respectively.

Ranges were 145 and 161 feet at 446 MHz.

The length of the counter's telescoping antenna affected
the range.

I had about the same results on my Optoelectronics Cub counter. There are so many frequencies blurring around us all the time - the counter will not usually lock in on a frequency unless it is significantly pronounced compared to the other ones floating around. I can stand near a watertower with several ham radio antennas on top but it won't lock them in if more than one is in use at any given time. Not exactly what I expected, but I still find uses for it...

What's the difference who is "behind" it.. if the man is dead, stop the crap. What is the point? It makes no sense to fight over a dead man. Surely all his worldly goods are long gone. So what have you left? Memories, bitter or sweet. Live with it. Sheesh!

For the program to save Group & Radio ID's, all you have to do while the Trunk Button is down is to press the "Search Button"... When the program see's any new ID's it will automatically save them. To Edit the Trunk Group or Radio ID's, press the "Manual Button" once, then under the "Trunk Menu" select Edit -> Trunk ID's....

Are you seeing approx. 50% Ones & 100% Recovery Rate in the Status Bar???

Hope this helps...

Jay

Yes it working fine now. I think the updated audio driver helped a bit :).
I tried to email you about a minor matter but your hotmail address seems
not to work :(it just bounces back. I removed the _ from the address BTW.
The editor works fine also :)
I'm really beginning to LIKE this program

Thanks for the help much appreciated :)

2569. APPALLED AT THE EL DORADO,CALIF. SHERIFF DEPT

Newsgroup: rec.radio.scanner
Date: 2003-11-04 03:51:17 UTC
From: SEARCH_AN_RESCUE_EL_DORADO@sacbeemail.com
Message-ID: <3d70d96b.0311031951.1317059b@posting.google.com>
Source record: 25022

APPALLED AT THE EL DORADO,CALIF. SHERIFF DEPT

THE SEARCH PARTY CONSISTED OF ONE DEPUTY SHERIFF.
I WAS ABSOLUTLY APPALLED AT THE LACK
OF AN ORGANIZED SEARCH PARTY BY THE EL DORADO,CALIF. SHERIFF DEPT.

AFTER DINNER I ATTENDED A PORTION OF A MEETING WITH THE SHERIFF
AND MEMBERS OF HIS STAFF.THE TONE OF THE MEETING WAS OPEN HOSTILITY
ON THE PART OF THE SHERIFF. THE MEMBERS OF THE PARTY WERE TRYING TO
PLEAD AND REASON WITH THE SHERIFF AND 2 WE NEEDED MASSIVE ORGANIZED
AID TO FIND ONE PERSON BEFORE IT WAS TO LATE.
FINALLY AFTER 2 HOURS OR SO OF PLEADING AND ARGUING, THE SHERIFF
BEGAN TO CHANGE HIS TONE AND AGREE TO GET FOREST CREWS AND A HELICOPTER
BACK IN.THE SHERIFF SET UP A BRIEFING FOR 1130AM. THURSDAY MORNING.
STARING A MEETING AT THIS LATE HOUR WOULD PRECLUDE ARRIVAL IN THE CANYON
TO START SEARCHING MUCH BRFORE 3PM.

he apparently had been living on guts and adreneline for
a long time, because once he was safe and comfortable,he collapsed.
we planned to wait where we were for the 1pm. rendezvous. periodicically
we threw leaves and green boughs on the signal fire hoping to attract
attention, disappointed that there was no helicopter.(the first
helicopter flight wasobserved at 1230pm. but he was never close enough
overhead to see our fire). at 115pm. we decided that we'd better wait
no longer and should start to walk out. we tried to carry HIM OUT, but
this proved impossible due to the roughness of terrain. 1 stayed
with HIM and I started out for help. 1/2 mile downstream i ran into a
party of 4 and started making a stretcher and 2 of the party of 4 out
to get help in the form of growlersberg equip. and crew and to try to get
radio contact with sheriff's dept.(walkie-talkies the 3 people from
the forest service had were no good.(the sheriff would only give us 3
people to search for roger .(because the sheriff said the whole thing
was a joke. if you call someone who is lost deep,in the forest for 7 days
a joke thats funny.)but after a veryrough walk to the the top of the canyon.
helicopter with a winch was call in from the air force and lifted HIM OUT
out of the canyon in the gloom of dusk. my prime impression of the operation
is the in explicable reluctance to act and even lack of interest displayed by
sheriff. he had to be pushed and badgered to do anything, and
that was always too little. I've always thought that i read in the
paper about someone being missing,"they" a great efficient rescue
organization, took over and called in necessary men and equipment.this
case, there was no "they". HE was saved by dedicated and persistent
family and friends.

This launch was not classified, and most of the Cruise Missile Test Launches
are not. There still are some classified launches in the ETR though.
Years back we would set up with cameras, telescopes and radios on the beach
on the day of a classified launch, and it perplexed officials that some of us
were aware of the upcoming secret launch. We had some pretty exciting days here
during the infancy of KSC and the ETR.

No scanner generally available on the market is able to listen to GSM phone comms. Additionally they run reasonably high level encryption that you will not break. If by some extremely unlikely event did manage, then you would be in line for a very very big salary from a government agency. None ofthe above things are able to be done by the hobbyist - some government groups yes, you and me, no.

Does anybody have a service manual or schematic for these old non-scanning monitors? I have the little yellow user manual, but it doesn't have any real tech info. The units apparently will decode two-tone signals, but there is no info on how to adjust the frequencies for this. It does not take reeds, but seems to have adjustable pots. Also, the models I have do not have a monitor/reset button, only a reset button, so unless there is a two-tone decoding, the unit stays squelched. And there is no external squelch control on the front of the unit. There must be one inside, but I am hesitant to start moving pots without a good drawing.

2578. LDOC Arinc Civil Air Frequencies Quest. ?

Newsgroup: rec.radio.scanner
Date: 2003-11-04 17:46:38 UTC
From: Robert11 <rgsxrose@comcast.net>
Message-ID: <KfmdnQUGtZMqeDqiRVn-vA@comcast.com>
Source record: 25031

Hello:

Saw in the latest monitoring times magazine some frequencies for the commercial aviation ARINC LDOC stations located in N.Y.

Thought it would be interesting, so tried them out.

Supposedly USB mode. They are:

3494 KHz
6640
8933
11342
13330
17925

But all I get is "noise,"as if it was a data stream, perhaps.

a. Are these voice channels ?

b. Am located near Boston. Should I expect to hear any of these ?

c. Is there "much" activity on these freq's., or can I truly expect hours to go by without picking anything up ?

Any other info. re these, or other, ARINC voice channels that I can possibly listen to (voice) from the Boston area ?

Much thanks,
Bob

Another opionion ... remember that there are *hundreds* of radio signals out there at any one time! AM/FM broadcast stations, TV stations, shortwave radios stations .. and the list goes on .. a frequency counter has to "find" a signal that is significantly stronger than all those 'random' frequencies so that it can lock on and give you a readout.

If you are tryng to find a feq of a radio that is low powered to begin with, then you'll need to get really close for that to happen.

Hello all,
First posting on here, does anyone know where I can obtain a copy of the program WinMDT that used to be available here on the net a few years back, and how well it worked compared to something like MDTMON. Also, if anyone would happen to know of any sites that have info on MDT frequencies that could be monitored. LCblanton's website used to have the info up on it, but he apparently thinks he's a scannergod and too good to reply to emails regarding this subject.

both winmdt and mdtmon were written for a type of MDT that has
(for the most part) been abandoned commercially now.
modern MDT runs at much higher baud rate and with totally
different protocols than those programs were written for.
much of it either encrypted or run on digital trunking
repeaters. THAT is the major reason that you haven't seen anything
posted about them (in the USA) in several years.
there are always (it seems) a few people that chime in and
" claim " their local metro area is still using the older / slower
protocols , but for the vast majority of hobbyist ... MDT is
LONG past monitoring. unless you are absolutely sure your local
MDT is old / slow mdc-4800 , forget about it. (both those programs
only decode mdc-4800 and do not work with the newer RD-Lap
9600 - 19,200 baud signals ..all of which have newer and different
encoding / decoding protocol.)

alternative possibilities include some of the rd-lap-9600 mobile
units seen , occasionally , for sale on ebay .... and the rare MDT
field testing terminal equipment also seen on ebay. in either case
there are MANY different types of signals that people lump into the
MDT realm , these days ... many of them no here near being the
MDT that people generally think of. most of the above is long shots
at best and not likely to be what you have in your area. modifying
and using the above mentioned equipment requires " profound "
knowledge and equipment to be successful.

one of the best sites for current MDT interests is

http://www.geocities.com/CapeCanaveral/Hangar/8539/INDEX1.HTM

middle , center of the page. experience says these programs aren't
going to help you much (esp if you live in USA / Canada) but it's
something to work with.

remember that if you live in the USA , eavesdropping on MDT signals is
breaking Federal laws .

have phun .....
krackula ....

BTW: MDT freqs are VERY dependent on local applications and equipment
.they can vary from 150 mhz police to 900 mhz digital repeaters.
there are NO standardized freqs or encoding methodologies for "
in-car " mobile data terminals . in my metro area , alone , they
are located on 150 mhz, 460 mhz , 850 mhz and 900 mhz bands.

(CHiPs , and 3 different local PDs ... all on different freqs and
using different protocols)

I think you will find that the real problem is Motorola, they will claim patent infringement. My casual search of the regs found nothing that prohibits the reception of the signal in the US.

Kind of reminds me of some of the crap I see in alt.consumer.experiences
from folks pissed off cause their credit card company had the nerve to
charge them for being late with a payment.

ever since 1997 (or maybe 1998) ..the same EPCA pack of rules
that slammed scanner makers (remember the Newt Gingrich
debacle ?) , USA web sites that offered (some types) of free
decoding software (it why you don't see any USA sites like those
anymore) , and custom types of intercept devices (remember those
signal snarfer boxes that used to be sold on the web ?)
etc. ..... the congress / FCC has made it illegal to eavesdrop /
intercept ANY signals that have been encoded , encrypted or
otherwise radiated with the expectation of privacy of the signal.
these same laws also made it illegal to listen in on cordless
phones, cellfones, pagers , mobitex signals etc. if you listen in
AT ALL and esp. USE or repeat the information to anyone and get
caught (ala Newt) it is a federal offense , now.
Only " in the clear " signals (yes APCO25 is considered in the
clear) are legal to be listened to ..signals where the originator
had NO expectation of privacy when they transmitted them.
it's still illegal to use or repeat the " in the clear " signal info
in many instances ...but not just to listen .
it's why no new software has shown up to decode the newer signal
types ... because of possible federal charges that could result .
about anyone could eavesdrop on analog cellfones or 4 level flex
pagers .. but doing so , in the USA , is a federal crime ..now. (
this includes MDT ..especially MDT ..because police use it for secure
comms and expect it to be private)

Electronic Communications Privacy Act, 18 U.S.C. ï¿½ï¿½ 2510-2522, ï¿½ 2701

" ...Electronic Communications Privacy Act
("ECPA") (18 U.S.C. 2510-2522, 2701-2709, 3121-3126)
ECPA added electronic communications to the federal wiretapping act.
ECPA applies to R.F. communications privacy because it makes it
illegal to knowingly intercept, use and / or disclose electronic
communications that are in transit or while they are in storage. ..."

the EPCA started back in the mid 1980s and has been upgraded many
times. you can type EPCA into Google if you want to dig through all
the regs..

even the authorities can't eavesdrop either ... the laws apply to
them , also.

check it out .....

krackula ....

You have to be joking! I have a stack of those at home, and about the same shape or better, and with some of them full with crystals. Not one of them cost over 15 bucks. Biggest reason why is that it will cost at least $40-120 to equip it with the necessary crystals for the particular area of interest, depending in which source the crystals are purchased from.

If you get a buyer at that price, please let me know. I want you to sell my 1988 pickup for at least $5,000 and if you get that, I will give ya 2000 out of the proceeds. Either way, if it does not sell, I will counter offer for 15 bucks.

I've had the Radio Shack Frequency counter and it performs
just like the others. For twenty years got by using the SEARCH
feature on radios scanners and short wave radios .

Frequency counters are a test instrument and as such do what they are
intended to.
The one aspect of using frequency counter is getting close enough
or having access to the unknown transcevier-tranmitter to make the count!
With out arousing suspicion of the operator or intruding on an incident in
progress.

For casual frequency hunting the search feature on radios works
well.
Many of the newer communications (scanner) radios and VHF UHF police/fire

radio scanners have sophisticated search banks that do an excellent job
finding
new and unknown frequencies. The tone coded squelch search feature used in
some
radio scanners rivals that built into more expensive frequency counters.
Once a tone code is found it can be loaded right into memory along with
it's frequency!

After monitoring a the communications on a new frequency (found with
a frequency counter or by searching) the user if they don't I D
can be deduced easily, by the context of their comms!

of course not ... as a matter of fact I , personally , used to
really like monitoring MDT and pagers , just to mention a few (
ricochet , mobitex .etc) ....back when you could monitor those
... and I liked keeping an eye on government which (I believe)
should have civilian oversight. " keeping an eye on the boys helps
keep us in line. "
I kinda liked the way you could run the software (and a scanner
) and go away and come back later and see what was happening.
used to see some pretty interesting stuff ..from time to time....
never thought anything was wrong with it , back when.

BUT ..... times and circumstances have changed. now the theme
(they harp on and on and on) is terrorism and homeland security.
lots of government types like to believe that access to MDT ,
cellular , certain types of pagers etc ..are potential threats to
national security ... that the only people that would want access
to those types of signals are the " bad guys " or terrorists. that
average citizens understand that the " national good " out weighs
their own personal interests , in times like this. (sound kinda nazi
to you ? does to me !!) we all know that this is probably a lota
bull larkey ...but ...oh well ....

phreaking / carding (untraceable free calls) , cellular phone
hacking , police / mdt eavesdropping , computer viruses etc ..are
NOW seen as activities that only criminal types or terrorists would
want to do ... ALL potentially damaging to national security. I
don't necessarily agree with it all myself (at least not to the
degree of potential danger that " some " people seem to see
< the sky is falling , the sky is falling , ie" cl " >) but no one
asks for my input on these subjects ... just " this is the way it is
, go deal with it " ...." .... oh well ... times sure have
changed.

thats progress for you ...... ha ha aaahahahahaa

k.......

^ damn. you got some balls :P

Well, I'm not a bull.

In my haste I forgot to comment on encoding versus encrypting transmissions. Digital voice is an encoded signal so by his fictitious law we would not be able to receive it legally. Encoding is nothing more than formatting digital information so that it can be transmitted. All digital data is encoded. Encryption would be applied to the data before it is encoded, so the transmission must be decoded in order to find out if it is encrypted.

Anything that any of our federal, state, or local governmental agencies transmit is public information. If a federal employee talks to his or her spouse on an office phone it is not private and never has been. Government phones, as far as I'm aware, have always been subject to monitoring by the government.

ok, if I'm reading this right... the 5 digit id that comes up during the trunk
scan should be locked out, regardles of what channel is currently used. in my
area there are some freqs that change hands at night, so I have a couple freqs
entered in more than one channel, and I must lock those out individually

hmm, the only time mine beeps is when the batteries are low. the beeping you
here might be from source you are scanning.

a low batt might also explain why you can only catch one half of the
conversations.

cant find the manual, but I dont recall any beeping option.

have you ever considered the faqct that there may, in fact, be more than
one individual with that name?

unless you have irrefutable proof of this (not just some usenet posting
which alleges that another bill cheek passed on earlier this year) I would
suggest you keep your rumors to yourself.

you now pretty much rate right up there with John Mackey as one of the
biggest idiots on the net.

Here's one possible reason. If you are programming from a list such as Police Call, it does have a tendancy to list the repeater INPUTS as well as the outputs. You may be getting the input to the repeater possibly, even though you have locked out the output. This is if you are not dealing with trunking, as that may be different.....

As a retired DJ, I have a good set of headphones that I use from time to time. These are not the huge ones where the earpiece does not move hardly at all, but where there is a little bit of "play" allowed. I have used sets like these for years as a DJ and enjoyed the comfort of those. Typically they have a "walkman" size plug and include an adapter for 1/4 inch headphone plugs. Places like Radio Shack sell the adapter to go from "walkman size" plugs to the "sub-mini" size plug too. Go to any large, decent audio retailer (Bestbuy or similar) and take a look at some of them, and even try them out!

Also, depending on the headphones, you may not necessarily need to have the "band" that goes between the two earpieces on the top of your cranium..... Many wear that under the chin or behind the head, or whatever works to make it comfortable.

Good luck,

I have a Bearcat 600XLT that has no display. The 13.8v power adapter is new. I hear a hum from the speaker when it is powered on, but no backlight or display. I also feel heat coming from the voltage regulator (marked 7808), Any ideas? I have no schematics, so if you can point me to a likely component it would be much appreciated. I had assumed a bad power diode, but can't identify it.

What does it matter? ... the joy of scanning is on the
way out anyway! I mean, between FCC fascism and
deliberate signal sabotage increasing every day, it's
almost a repulsive activity any more.

I also think you're asking way too much for your
cell blocked impulse purchase, but I always get kick
out of how people regard the digital platform as some
sort of "new" technology.

Gee, what a coincidence! Eric Oyen has not been heard from in this newsgroup
for...what?....4, maybe 5 years? John Mackey hasn't been heard from for nearly
this long. Bill Cheek has been deceased for nearly this long.

Then, out of the blue, someone mentions Bill Cheek. I casually suggest that it
SOUNDS like John Mackey...or maybe Petey Boe, Andy Moss, or Eric Oyen.

Almost immediately, Eric Oyen appears, wondering why his name was mentioned and
assuring us that he had nothing to do with it, of course.

Coincidence? You be the judge.

It may be true. I chatted with his wife Cindy seems about 6 months ago. I was surprised to learn that she was in the Las Vegas area "getting on with her life" she said.
She was selling one of Bill's 2006s from his personal collection.

: looking at regular scanner noise reduction headsets, in particular the
: Radio Shack unit p/n: 33-1158.

: Does anyone have these, and if so, how are they to wear for long
: periods, ie a full race? sound?

I have them (stock number 33-1198 not -1158), but never tried them at a racetrack. Never used them for any extended period either. (I bought them to use for ham radio use at a loud public serivce event .. but ended up using something else)

They seem to be well built, and very similar to "commercial" headsets.

My advice ... buy a pair just before a race. Use them and see what you think. If you don't like them then just return them under RS's excellent return policy.

Thanks for the help Mike. I am getting 12.6v out of the left leg and .7v (seven tenths volts) out of the right leg. Is it just a bad reg or something after it maybe? Sorry if this is a repeat post, my news server is acting up.

left leg is the feed , right leg is output.
so, from what u say, it's gone!

not unusual for them to go in time.

just get one from say maplins or someone. they r quite common.
if u get no luck, i'll post u one free.
not sure where u r but im essex uk.
if u do get one & the old one was on a heatsink or mounted etc
just remember to use some more heatsink compound on the back & this should
give it a better realiablity chance.
as for if something internal 'made it go', well they can deliver 1A, so
something will get hot when u do get it going.
so again, it should be easy to finf if that's the case

best of luck, it's quite a simple job

let me no how u get on

Excellent Mike, and thanks for the offer. It dissipates heat agaist the
outer case itself, so no heatsink involved. I'll try to get a replacement
and let you know if I can't, will send postage etc. I appreciate all the
help and will let you know the outcome.

Hi,
I am looking for an older scanner, Pro-23 or Pro-26 4 channel scanner
If you have one collecting dust and would consider selling it please let
me know the condition and accessories etc.
Does anyone have any crystals they are wanting to sell????
Please e-mail me at delta150@hotmail.com or reply to this posting
Thanks-Russ

Chip

Is the channel your trying to lock out on a trunking frequency?
If your locking out a trunking frequency that was entered into a
memory bank IN CONVENTIONAL mode then the scanner can't
trunk track. Locking out individual frequencies will not stop
the channel (TALK GROUP) from being assigned by the trunk system's computer
to another frequency.

Look at the PRO - 94 display for the word "trunk" in the bank
where the offending channel is. If it's a trunking system and this is not
displayed, go back to the manual to find out how to designate that bank
"TRUNK' and the set the TRUNKING MODE to MO or ED and reenter all the
frequencies for that system in the bank.

Many folk have made this mistake , entered a trunking system in
conventional mode!
Once it's correctly entered you can then set up a " scan lists"
of individual TALK GROUPS and the PRO-94
will pass by the unwanted channel. If you lock out a" talk group" in a
scan list
or while SEARCHING a trunk system that "talk group" will stay lockout in
both ways of scanning I. E. 'scan list' or 'trunk search' !

The beeps sound like a EDACS trunking system, do the beeps invoke a delay
in the return to scanning the frequencies? Again entering the trunking system
in the correct TRUNKING MODE may cure this beep problem.
From more information check out this site. Look at the TRUNKING BOARD

<http://www.strongsignals.net/index.cgi>

<http://www.strongsignals.net/access/boards/trunking/board.cgi>

That is very interesting. If this really happened, then they conspired to
cheat
MANY people out of money that was given to help with is health costs &
criminal
defense.

Interesting..... If correct, then they conspired to cheat many out of the money they donated &
probably voilated laws since they were under criminal charges for their other actions. You better
FIRST confirm there are not multiple people with that same.

(GOD, wouldn't THAT be a curse!!!)

I was using the Aircraft band-scan feature on my Pro-90 when it stopped on 111.18 Mhz. It was just a carrier with a periodic morse code transmission of the letters SDZ (... -.. --..). Anyone know what these letters could mean?

Thanks

Luke

Does anyone know of a dealer in the Dallas/FT Worth area that has various shortwave receivers on display? I am looking on a step up from the DX-398 and was looking at the Grundig Sat800. I would like to see it and purchase from a local dealer.

Thanks

Could be a VOR beacon.

Luke
It is probably a VOR at a airport near you.
It is an omni directional radio beacon that aircraft
use for navigation. It transmits a code identification for the
particular airports that they are located at.
Also, 111.18 mhz puts it right in the frequency area they transmit.

Hello Jim,

Do you have any of the stores below? I believe The Sharper Image has
a couple outlets in Texas.

The Good Guys
Brookstone (NY, LA, DC)
The Sharper Image
The Wiz
West Marine

I would recommend hitting one of the following just to see what else
is out there. Sorry I do not know Texas very well, these might be far
away:

Texas Towers
A Division of Texas RF Distributors, Inc.
1108 Summit Avenue, Suite #4
Plano, TX 75074

KCOMM, INC.
10815 Gulfdale
San Antonio, Texas 78216

Houston Amateur Radio Supply
181 Cypresswood Dr.
Spring, TX 77388-6038

Austin Amateur Radio Supply
5325 N. I-35 - Austin TX 78723

This is a VOR identifier. A vor is used for navigation purposes. What appears to be a continuous carrier is actually a signal that is electrically rotated to provide bearing information. When tuned in with a VOR receiver you can determine which radial of the station you are on. Cross referenced with a second VOR an exact position can be determined. Most are co-located with a DME which is distance measurement equipment allowing position to be determined with a single station. I.E. I am 22 miles from the station on the 090 radial.

Fry's has a few, the Sat800 included. Tucker (mentioned in another post)
used to have a nice retail store, but closed that maybe 7 years ago. Texas
Towers caters mainly to hams, but may have a few "consumer" SW receivers.

Performance is comparable, but construction is far superior on the Diamond.

It's like the old CB days: a HyGain CLR-2 sold for $49.95 while the Radio Shack
knockoff (Archer 5/8 wave) went for $34.95. Both had 4db gain and appeared
identical. But the Hy-Gain used aircraft-grade aluminum and machined clamps
while the Radio Shack used cheap aluminum and metal screws. Guess which one
held up better in wind and ice storms?

As with everything in life, you get what you pay for.

I knew the software on the CDROM that came with the PCIF cable wouldn't work with the Pro95 so I downloaded a copy of Starrsoft Win95. That doesn't seem to be working for me believe it or not. I've checked my cable connections at both ends and I've set the serial port to COM1 in Win95 but I still get nada. What gives here? Is there some other proggy out there that I should be using instead of Win95 or something?

Neither does the cable.

>so I downloaded a copy of Starrsoft Win95. That doesn't
>seem to be working for me believe it or not.

If you're using the cable that came from RadioShack, catalog # 20-048,
it's quite easy to believe. It would be difficult to believe
otherwise.

If you look at the Win95 web site, you'll see a link to a bunch of
cable information, including a big, red warning that 20-048 won't
work.
http://www.starrsoft.com/freeware/win95/cables/cables.html

From: Alex Devlin <Alex@127.0.0.1>
Message-ID: <Xns942E8E6DE182Ejammy@68.12.19.6>
Source record: 24990

I just got a RS Pro-94 but when I follow the instructions for entering trunking frequencies it doesn't scan for the data channel.

I got the frequencies from a website and entered them according to the instructions on the RS support site. (http://tinyurl.com/568p) When I press SRC at the end it just sits there not searching or scanning. I even tried the other instructions for the "A" model where you press SCAN then SRC. It scans but it doesn't search like the instructions say.

Am I missing something really obvious?

Does anyone have trunked frequencies for Oklahoma City and an idiot guide to entering them?

Dazed and confused.... :-/

I have been monitoring Kern County, Ca. all morning and we have had
five off rode motorcycle accidents requiring a dust off.
Still have 4 more hours of day light to go.

Say, my "15 channel cordless phone" seems to transmit on 48.000 to
48.350 in steps of .025 Mhz, obviously different than
http://www.flash.net/~av8tor/radios/cordless1.htm
(46 MHz Cordless Telephone Frequencies)
48.000... must be a local Taiwan standard?

P.S. Are 900 MHz Cordless Telephone Frequencies,
http://www.flash.net/~av8tor/radios/cordless2.htm
listenable as regular FM transmissions?

>> I just got a RS Pro-94 but when I follow the instructions for entering trunking frequencies it doesn't scan for the data channel.<<

Is it possible that you don't have all the freq's in it? One time I had a scanner programmed and up and running and it suddenly quit trunking. Come to find out that the city had added more freq's to the system and moved the data channel to one of the newly added frequencies. Thought I was going nuts before I figured it out. Tulsa used to have 20 freqs but now has 30.

Would it not even search without all the frequencies? When I enter the frequencies as the RS site tells me the scanner doesn't do anything at the last step. It sits on the last channel/frequency I entered. Or it starts to scan if I follow the steps for model "A". Is this the way model "A" trunks?

Could you post the frequencies for Tulsa here Rob? I sometimes get up there so I could try them.

Source record: 24908

I've owned a Diamond for 3 years now. I've never seen the A/W unit.I don't know what materials it is constructed with, so I cannot give an opinion. However, I have experienced 2 major weather challenges to the Diamond in those 3 years that, in my mind, makes it worthy of praise.

Three years ago, we had several days of 70+ MPH winds; my R/S discone had radials that blew off and which I found some 500' away from the antenna. Some of the radials broke off at the area where the stud is crimped into the end of the radial. Some radials even got bent in the winds! When it came time to replace the R/S discone, that's when I bought the Diamond.

I was one of the folks who recently got evacuated in the SoCal fires. Here again, the antenna withstood 50+ MPH winds for 2 days without anything being out of place. When I installed the radials into the Diamond base, the Allen screws actually "squeeked" as I torqued them into the radials; they're not coming out! In 50+ MPH winds and after two days of a firestorm, I returned to my home [still intact, thank you CDF et. al!] and the antenna was there waiting for me.

Again, I cannot vouch for the integrity of the A/W unit. If you live somewhere that has no adverse weather...ever...try the A/W unit. My house and utimately...my life was at stake during the week of October 26th. The Diamond held up, gave me the ability to hear the CDF and how the fire was acting. It probably saved my life and I'd recommend it to anyone! Diamond's URL is listed below. They have a toll-free #. I'd call them up and ask them what their antenna is made of and compare that with what you are told from A/W. Then, make up your own mind.

Alex;

Have you stepped through the bank containing the Tulsa trunked
system's frequencies MANUALLY? If your not hearing a
control channel audio continuos buzzing on one or more of the frequencies,
then as has been stated your missing a frequency(s)

Another possibility is, if you do have all the systems frequencies loaded
into the PRO-94 correctly then you may be out of range of the trunking
repeater(s)
And one last thing did you set that bank to the correct trunking mode before
entering the frequencies? try going back through the set up to see mode is
set correctly.
here's a site to look up frequencies
<http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts>

You can look for other trunking systems and or other Tulsa frequencies
by doing a frequency search in the 800 MHZ range. When a control channel is
found
look it up at the FCC site to get all the other frequencies licensed with it.
Jim

Yeah. Bwahahahahahahaha! Wait! Someone clue me in on what's so damn funny about the question.

Well Dan, here a better answer than LOL.

45/48Mhz cordless phone are the norm in Asian countries.

And yes I do believe 900Mhz cordless phones are listenable as FM transmissions as long as the phone does not have Digital Spread Spectrum.

Hi,

For a new page on my website

http://www.tetrascanner.com/links-to-tetrahobbyists.html

i am looking for links to hobbyists,radioamateurs,scanner-
enthousiasts....who have a website with a reasonable amount of
contents about tetra or ,on a hobby/amateur level,no matter where in the world...please
send your links to the contact adress
mentioned on the main page (www.tetrascanner.com)

On this page you will now find a very instructive and interactive
tetra-handset demo by motorola

Ok maybe you know that one already...so what about this one:

A 14 minutes official promotion-video about The Netherlands
Tetra-network called "C2000" it's a streaming video it can come to
you in 3 different speeds...sorry it's in Dutch ...just watch the
pix :) you may find it here

http://www.tetrascanner.com/forumsandnewsgroups.html

if anyone knows of such a videostream about your countries tetra
system please let me know also.

Thanks

Tetrascanner

2722. One Best Antenna for ICOM-8500?

Newsgroup: rec.radio.scanner
Date: 2003-11-11 12:05:07 UTC
From: Bob <rljames@hotmail.com>
Message-ID: <Xns9430528A2AB47rljameshotmailcom@208.34.105.14>
Source record: 24927

Can anyone recommend *one* good antennna for use with an ICOM-8500 in a situation where an antenna of any significant size is a problem? Maybe something unobtrusive and simple like the AOR SA7000?

The other related question would be how do I best connect this single antenna to *both* inputs on the radio?

Thanx,
Bob

I have a frequency for Consumers/Enbridge Gas in the Niagara Region, there is a CTCSS noise/marker on the frequency that locks the scanner up, the CTCSS tone that comes up is 100.0 but when I put this tone in with the frequency it does not cancel out the noise on the frequency. Does any one in the Niagara area know if 100.0 is the tone or if not could you provide the right tone for me to listen to this frequency .

Any help would be appreciated.

Steve

> sorry for you.

Not sure if this reply was meant to me or not.. IF SO, YOU MISREAD ME OR PART OF ME that was repeated somewhere.

"I" enjoy scanners, radios and electronics a lot... I was saying "WHO GIVES A CRAP" about this rekindled debate about a man and his life/death. If the man is dead, let him rest in peace.. How he died or when is of none of our concern - anymore.
When I first came to this news group, there was a war bigger than life itself with Mr. Cheek, his followers, supposedly one named John Mackey and so on... This newsgroup is to discuss scanners and such, not to personalize issues. That debate took up more of the news group than I'm sure many of us not involved care to admit to seeing. IF he did wrong, and I don't know that he did, it is up to the authorities to figure it all out. Arguing about it in here isn't going to do a damned thing.

This war has no place here in this newsgroup and IF the man is truly dead - again - let him rest in peace. IF he, like us did anything to be ashamed of - none of us are with out "a" sin, then it is up to powers far greater than ours to deal with it. Now, can we PLEASE get back to scanners, radio, electronics discussions?

I don't need you feeling sorry for me... I'm not the one rekindling the debate/war. Feel sorry for those who feel they must prove a point and start the war again. I can always do as I did once before, eliminate the scanner group and perhaps miss out on giving advice to some who seek it here - which I have done - in private replies. Blocking senders is hopeless as many just use new names to perpetuate the same crap. It's easier to get away from the group.

So, what is it going to be??? ELECTRONICS AND SCANNERS??? OR A WAR???? If a war, I'm out of here. I have a life.
I don't need to read that bull shit. GW

Don't forget about "Petey Joe Boe!"

This was one of my favorite Cheek posts:

Subject: A Story of Petey Joe Boe
Date: Sat, 27 Jul 1996 06:20:15 GMT
From: bcheek@cts.com (Bill Cheek)
Organization: COMMtronics Engineering
Newsgroups: rec.radio.scanner

Listen, my friends, and I shall tell you a short story of the schizo-freako-paranoidal-hermaphrodyte fondly known as Petey Joe Boe (PjB). I repeat this story from memory as it was told to me by Captain Larry of "The River Dragon" fishing boat.

Now this lad, Petey, lives in Portland, Oregon, not far from the banks of the mighty Columbia River. Being an out-of-work piano teacher and in desperate need of something to eat, weary of a diet of Depo-Provera and Prozac, the fine strapping Petey found himself down by the river applying for work in the fishing fleet.

Much to his relief, the fine Petey was immediately hired, but because of no experience in the fishing industry, he was required to start at the bottom of the ladder as an Apprentice Baiter at minimum wage.

Not content with swimming around on the bottom of the barrel, the lad Petey learned about anchovies, cut mackerel, chum, and hooks, so that within about six months, he was advanced with a double-pay hike to Journeyman Baiter. His mother was so proud!

Thusly inspired and proud of his handiwork, the magnificent Petey got down to serious work with the arts and sciences of baiting like there was no tomorrow. Surprise, surprise, surprise! Three months later, the boy Petey achieved his crowning glory as he was elevated to the highest rank of all, Master Baiter.

Bravissimo, Boe! Way to go! <applause> <applause> <applause>

....
.....<pausing for more applause>........
....

In another installment, if interest warrants, I'll relate the anecdote
of how Master Baiter Boe got cured of a monstrous tapeworm.

Hi everybody,
I try to get Informations to choose a Rx like the Winradio WR1500e or the Icom PCR 1000 to be able to use on my sailboat for navtex weather fax .....And may be satellite.
I would like to have your advise on these interresting black box radio, or may it is better to have a normal Rx, but I need a 12 VoltsDC, for the power supply on the boat, small, and stong enougth for the marine environment.
If you can give me some ideas of type, price...
It will be superb.
Best regards for all.
JP

Bonjour a tous,
Je recherche des renseignements et des conseils choisir un type de recepteur petit de taille pour pouvoir avoir le navtex, fax meteo, et peut image satellite, j'ai pense au Winradio WR 1500e ou autre models Icom IC-PCR1000 Y a t-il d'autres models du meme type???

Ce type de model externe black box a t-il la meme sensibilite ???
Peut t-on en trouver d'occase???
Le critere principale est l'alim 12V, la taille, est la resistance au milieu marin!!!
Merci de tous vos conseils

I've heard that tale in the past, though not in here. Must have been before my arrival in this newsgroup or when I had cut the newsgroup out of my list to be received for a few months. Hell, I'm not even sure just who all WAS involved, I listed only the ones I could recall. But it is sad to see this all rehashed and for what? It is ridiculous. Can't we all enjoy the hobby - in this case Scanners, radios, electronics with out a major pissing match? Hell, I'd be more than happy to buy any one of ya a beer or cup of coffee to chat scanners, NOT FIGHT over something stupid. GW

2733. svc manuals needed

Newsgroup: rec.radio.scanner
Date: 2003-11-11 18:11:15 UTC
From: Ghost writer <Spamfree@Spamfree.com>
Message-ID: <7D9sb.38205$A%3.499034@ord-read.news.verio.net>
Source record: 24936

I have need for a couple to a few service manuals for scanners. Besides the manufacturers, some of who want as much for a manual as the scanner was damned near worth brand new, does anyone know of a reasonable source or have copies they're willing to sell reasonably? Realistic, Uniden and Cobra models are being sought.

2734. Scanner Sales in MD

AFAIK, there are no Md. dealers that carry the 250; I don't even think
Best Buy would have it. Ham Radio Outlet *might* have it; I think they
have an office in Virginia, and I know there's one in Wilmington.

This goes back to the days before scanners or even good tunable VHF receivers. It's a two channel (150-175 Mc) (in those days it was Mc) xtal controlled converter that's about the size of a pack of cigarettes. They would strap it to the back of a small transistor am radio that was tuned to the output of the converter. They worked reasonably well, especially when you considered the other options available in those days, the local PD even used them to keep up with the action while in the coffee shop.
It's in very good shape, has no xtals and I couldn't even tell you what cut it would require. The ones I used to home brew used a standard 26.680 CB xtal (5th overtone) but don't think this one is designed that way.
I'll pack it up and ship anyplace in the states for $15.00. You couldn't get a more interesting looking paper weight for that. :)

2746. Scanner Setup Help Please?

Newsgroup: rec.radio.scanner
Date: 2003-11-12 10:52:06 UTC
From: Bob <rljames@hotmail.com>
Message-ID: <Xns94314629FCCFCrljameshotmailcom@208.34.105.14>
Source record: 24849

I'm new to scanning and a little confused about how to setup "searches" of various frequency ranges.

For instance, rather than enter all the CB channel frequencies into memories I *thought* it would be much easier to simply search through the CB band in increments equal to channels. So, I programmed 26.965 (ch1) and 27.405 (ch40) as scan edges into my radio along with a step size of 25 kHz. So far so good... However starting the search resulted in the radio moving through the band by frequency stops that were "off" from the actual CB channels???

So what am I doing wrong?

Also, in the specific case of CB I know (or at least can calculate) the step size between active frequencies. How do I determine that information for other bands or frequency ranges? And am I going to have the same step problems?

My radio has a programmable step size with a minimum of 0.5 kHz resolution. Can someone please teach me how to setup searches? Or maybe direct me to a webSite or book that would help?

Thanx,
Bob

Firstly, the channel steps on 27 MHz CB are 10 KHz, not 25 KHz with a couple
of frequencies missed out (i.e. 27.195 MHz and about 3-4 others). Not sure
what mode you are using, would recommend AM and not FM.
As to other bands, experience will tell you what to use for channel spacing,
it varies with different bands, and different countries.

>
>So what am I doing wrong?

The US CB Channels are at 10kHz spaced channels - 26.965, 26.975 and so
on.

26.965Mhz is not a frequency that is divisible by 25 (25kHz) as you were
using however you really need to be using 10kHz tuning steps as your
chosen step size but depending which model you have this may still not
work correctly as 26.965 is not a frequency that is divisible by 10
either. In other words the frequency you enter has to be divisible by
your chosen step size.

With 10Khz tuning steps it would perhaps go 26.970, 26.980, 26.990 and
so on.

Some models though such as the AOR AR8200 and Yupiteru MVT-9000 for
example will allow you to "Offset" the frequency and step size so that
it will search the chosen frequencies as you want in your example above.

If this isn't possible on the model you have then you would have to use
something like 5kHz steps starting at 26.965 and going 26.970, 26.975,
26.980, 26.985 and so on so.

Hi Roberto,

Thanks for sending the audio sample

Sounds like very simple "voice inversion" or "speech inversion"...wich is the most simple scrambling system there is ...you can recover the original voice by mixing (actually distracting) it with a tone somewhere between
1000 and 4000 hz...there is a software program on my website called "voice scrambler/descramble 1.1" i think originally made by
(what a coincidence) an italian radio-amateur you can find in the "free software section of my website...

www.tetrascanner.com

You will have to experiment a little with your soundcard settings and levels to make it work

A hardware decoder can also be made using a: TBA120 chip (1 euro) or SO41P (1 euro)

You may also look in Germany where the same system is still in use by the German police i think a company called "VHT" have a
lowcost decoder for that. or you could check at the website of
CML microcircuits who have a scramble/descramble chip for speech inversion

Or just look on the internet using google for "speech inversion circuit" or "voice scrambler plans"

You may even be able to use a ssb receiver to decode it ...in that case you will have to transmit it first in am or ssb and then
receive it agian ...by "playing with the tuning dial" you could make it intelligible

Just remembered that you can decode it with 2 scanners that have a scramble decoder built-in

Yupiteru (do'nt remember wich model i think this one is not tunable)
Aor 8200 (have an option for a descramble module that can be tuned)

Greetings

Bla

People can be a great deal more helpful if you told us the make/model
of the scanner you're using. Yahoo has numerous groups devoted to
scanners, and it's likely you can get more help there, apart from the
explanation Jonathan gave you.

2763. AOR SDU-5500

Newsgroup: rec.radio.scanner
Date: 2003-11-13 04:48:08 UTC
From: goodbye@hotmail.com
Message-ID: <c2Esb.137218$275.414759@attbi_s53>
Source record: 24865

I was thumbing through the latest Monitoring Times yesterday, when I saw an ad for the AOR SDU-5500.

This seems to be very much like a spectrum analyzer. I've always wanted one of these. However, I hear that you MUST use it in conjunction with the AOR AR-5000 or similar radio.

Is this true? How terrible if it is! And if not, can it work with a BC 780XLT?

Has anyone ever used one of these things before? Is it as 'difficult' to use as a freq counter? Is it swamped by cellphone and pager signals?

Thanks

Those frequencies that are "missed out" are some of the "radio control"
frequencies somewhat still used by model aircraft and other model remote
control items. You are correct in the 10khz step making it a better scan
though. :)

Thanx everyone for the feedback. As was pointed out, I did mispeak when I indicated a 25 kHz step size for the CB band.

In any case, the problem remains and appears to be that any frequency bounds for a search need to be divisable by the step size selected. Otherwise the radio will "adjust" the frequencies it stops at throughout the range of searching and possibly completely miss intended targets.

This would seem to me a significant problem??? Staying with the CB band example. Given Jonathan's explanation of the workaround my search is essentially doubled by causing the scanner to stop on intermediate freqs that are essentially not used. Waste of search time and in the case of stronger signals the radio may stop off optimal tune.

My radio is an ICOM-8500.

Thanx again,
Bob

Have you seen the Icom PCR-1000?

It is cheaper (around $300) and has all the functions of a wide band scanning receiver plus a spectrum analyzer. Bells and whistles are limited mostly by the software. Course you will need to hook it to your computer as everything is displayed on your computer screen.

Personaly I dont like using my computer to control a radio but some people love it.
In fact I am thinking of selling my PCR-1000 as I seldom use it.

Well, ONE best antena isn't going to work very well at all. A longwire
would do a good job on the <30 MHZ side, and over 30MHZ a decent scanner
antenna (Not a discone, just about anything is better) would do ok.

A random wire can really be hard to spot if you take the time to think
about it.

If you do go with one antenna, a switch would probably be the best
thing, a "splitter" is not a good idea.

Scanning CB is usually a pointless thing to do, the carriers and just plain old noise will make the scan stop constantly.

Yeah, great that idiots like that are on our streets with guns telling us what to do.

All I hear are cops getting pissed off all day that everyone is wearing their seatbelt and they haven't been able to pull anyone over for it all day long. Made the mistake of giving that tape to the local news station. Now that channel is scrambled.

Gee, poor cops. Why not see what is going on at the donut shop again?

Here's one for you......

Officer #`1 - Call going down, female cop gets injured. She calls in -
officer down.
County clears the airwaves to get a general area. They respond help. They
ask for the air to stay clean of non emergency traffic.
Officer #2 - is trying to contact her to get to her.
Officer #3 - comes on after being asked NOT to do any license tags for a few
to do what? ASK FOR ONE.
Officer #2 comes on and says.. HEY, CLEAR THE FU(#!ING AIR, WE HAVE AN
OFFICER DOWN.
Officer #3 says I need a tag run, it will only be a minute. He is then
reminded of keeping the air clean
Officer #2 says CLEAR THE AIR, THAT DAMNED TAG CAN WAIT. IF you don't like
it, meet me after this is over.
County - OK PEOPLE, we have an emergency in progress, let's act
professional.

G.W.

^ Cop 1 What was the discription of the suspect?
^ Cop 2 bald with grey hair

It could seem funny if you're not familiar with other uses of the word "bald". Bald doesn't have to mean no hair -- it can also be used if only the top of the head has no hair.

Frank

Just one word - eBay. The prices for these scanners tend to be low - and
you get a good deal.

Thanks for the info, everybody! The Cruise Ship monitoring site in particular looks nice, it's well organized like Robert Eisner's frequency lists.

I finally got around to sending an email to Holland America, and this is their response, in case anyone is interested:

> We have been advised that you can bring your radio
> monitoring equipment on board. That is not a problem.

Thanks again!

Michael

Depends what country you are in.
In Aust there are 40 UHF CB channels - 25 KHz spacing from 476.425 MHz to 477.400 MHz with repeater outputs on the first 8 channels, inputs 30 channels above, no VHF CB channels.
In the US there is the FRS which is somewhere about the 466MHz area, dunno how many channels.
In Europe they have a 446 MHz low power allocation.
I think there is also an allocation for LIPDS (Low Interference Potential Devices - allegedly) in the 433 MHz area (yes in the amateur band), not sure if it is worldwide or not, but here in Aust it is totally fucking stupid as it is in the repeater input segment for the amateur 70cm band.

I'd guess that at least the 50 channel one isn't... I mean hell, that would
be one awfully big scanner to hold 50 crystals plus the controls for each
one... Back-breaker for sure! :)

:)

For the record, I have "several" friends who are cops. It is a tough job a lot of the time. Maybe not all, but a lot. They have "fun" when they can - like most do. Being a firefighter and previous Paramedic, I know that you have to find humor when possible.. Some of the things you see stick with you for life. You do the job when others run from it. Call it a sick sense of humor, but you have to deal with the outcome of the calls. Don't believe me, if you're not involved, try it sometime. And yes, WE ALL have our bad apples. There isn't a profession on this earth that doesn't.

As to the words said on the radios, in excitement, or blank of mind, people often say things that they wish they hadn't. Others tend to not want them to forget. They play up on those words and the person who uttered them never lives them down.

As most things, you can merely look upon them as "bloopers". Like clips of movie takes, comedies, sit-coms, etc. NO ONE IS PERFECT. The TV bloopers unless live TV, can be edited. Things said over a radio can not.

Regardless of the bloopers made on a radio, so long as those men and women are out doing their jobs to protect us from the scum we all face, a blooper is insignificant as opposed to a threat to my security.

So, try to look upon this with the humor as was intended (I believe). I'm sure they have as well, with a red face!

LOL...actually, I have a sense of humor.
But describing police officers as 'idiots with guns', etc, isn't particularly funny, nor do I think the miserable 'cops & donut shop' quips as being funny, either, unless of course one still counts with one's fingers and toes <g>.

No, that original post was nasty, not funny, and I stand by my response.

I stand corrected, Ghost Writer; thanks for setting me straight.

FWIW, I have a unique interest in police humor...Hell, I even wrote a book
about it... and I admit that I've worked with too many good cops over the
years...and buried a few of them...to just sit idly by when I feel that the
good guys are being unfairly criticized.

Take care, and good luck!

In that regard I DO agree with you. COPS aren't as they used to be... they are now all required to undergo vast training. Even in smaller areas. It isn't like the past where most anyone could be given a badge and gun. Even the Constables. A few years ago, you got elected, you were the man. No training necessary. NOT NOW. The world has changed.

COPS are human, they too are prone to errors. IT HAPPENS! WE ALL DO. I've seen people take cops as idiots when the cops were merely trying to cut them a break. The people involved were the "idiots". Basically, "I" have come away with the thought that anyone who hates cops, "USUALLY" has a past with them. They got caught speeding, dealing, whatever. Yes, I'm human too, I've been busted speeding twice. It was MY fault, not the cops. Why blame them? If a person can't admit to their own mistakes and learn from them, then I pity them. However, when I got busted, I didn't give them a bunch of bull shit. Being I didn't, they cut me a break. They said so. One guy had me dead to rights. I wasn't thinking - was consumed by a days events and was way over in my speed. He wrote me up for 10 over. And I'm going to argue that? HELL NO. Don't be an ass and you won't have a problem. Take your punishment like a man/woman. Admit to your mistakes. Why make it harder?

And since we're into the Holidays.. One thing I DO ADVOCATE is a DESIGNATED DRIVER. I've pulled far too many people out of crashes, INNOCENT victims. Children killed. So, PLEASE DO NOT DRINK AND DRIVE. If you're caught DUI, don't blame the cops, they didn't make you drink it. They're only trying to keep you from killing someone, maybe even yourself.
G.W.

James, I got to agree with you here.
"Cops and donut shops" is a bit old and is a stupid thing to even say.
It is no more true than saying every truck driver takes speed to stay awake.
It is so stupid it just isn't funny anymore if it ever was.

What is funny is those cop chases on TV narrated by some idiot that blows every thing to the extreme.
If the guy is going 45 mph he will describe it a dangerously high speed chase.
One fox with 20 hounds chasing over hill and dale with a play by play unrealistic description.
But even those are getting old and less entertaining as they seem to be made for the 10 year old mentality.

Since the PRO-2006 is a wide band scanner, would you be kind enough to tell us what frequency you want this best performance to be at? Do you want the antenna to be directional or receive from all directions?

Actually, the one that comes with it aint bad for general use but any antenna mounted outside and up in the air would be much better.

Lynch Book Debunks Bush PR. Dump the Lying Chimp in 04.

November 11, 2003
Lynch Book Says Iraqi Doctors Were Saviors
By THE ASSOCIATED PRESS

Filed at 2:26 p.m. ET

NEW YORK (AP) -- The authorized biography of Pfc. Jessica Lynch debunks early myths that U.S. troops waged a daring rescue to save her, and describes a team of Iraqi doctors as gentle caretakers who worked at their own risk to keep her alive.

``I Am a Soldier, Too: The Jessica Lynch Story,'' published Tuesday, suggests camera-toting American fighters met no resistance as they rushed a Nasiriyah hospital April 1 to retrieve the prisoner of war.

The biography, by former New York Times writer Rick Bragg, discredits stories from the war's first days that Lynch shot at her Iraqi captors, and that the Iraqi hospital was hostile territory that posed grave danger to Lynch's rescuers.

Once, according to the book, Iraqi medical workers even loaded Lynch into an ambulance and drove it to an American checkpoint in hopes of returning her -- but came under fire from U.S. troops and had to turn around.

Critics have suggested the U.S. military, desperate for support for the war, exaggerated Lynch's story -- or at least did not go far enough in publicly correcting rumors about how it played out.

``From the heartbreaking mess of the convoy ambush, gold was spun -- first from an event that looked more dangerous on television than it perhaps had truly been, and next from a story of heroics in the fight at Nasiriyah that a Hollywood script writer would have been hard put to invent,'' Bragg writes.

And the suggestion by a handful of critics that Lynch may have contributed to the myth, deceiving others to enhance her heroism, enrages her family and makes Lynch herself cry, according to the book.

``Don't they know I'd give anything in this world if it never happened at all?'' she says.

Eleven soldiers lost their lives when Lynch's 507th Maintenance Company convoy was ambushed March 23 in Nasiriyah after missing a turn.

Lynch dismisses early reports that she had engaged in a firefight with the Iraqis who ambushed the convoy. Like many soldiers in her company, the M-16 rifle she carried had jammed with grime and airborne sand. She fired no shots, she said.

Lynch, then a 19-year-old Army supply clerk, was rescued nine days later by American soldiers who had been tipped off by an Iraqi lawyer that she was captive in a hospital.

The book says Lynch ``lost'' three hours between her last memory of the ambush and her awakening in an Iraqi hospital.

In that time, according to medical records cited in the biography, Lynch was raped and suffered broken bones, torn flesh and two spinal fractures. Iraqi doctors who treated her have told reporters she was not raped.

The book also says Lynch strongly resisted Iraqi doctors who wanted to amputate one of her legs at a general hospital in Nasiriyah. The surgery never took place.

Still, Lynch describes a caring, sympathetic staff at the hospital. When she told one doctor she was afraid of Saddam Hussein, the doctor hushed her and replied: ``Don't say that name. We don't say that name in the hospital.''

One older nurse took notice of when Lynch began to panic, or break under the intense pain, and rubbed soothing talcum powder into her shoulders and back and sang to her.

``It was a pretty song,'' Lynch says. ``And I would sleep.''

Lynch and Bragg are splitting the book's $1 million advance, and publisher Alfred A. Knopf ordered a first run of 500,000 copies. The cover features a smiling photo of Lynch in military garb, a U.S. flag behind her.

The book's release, timed for Veterans Day, comes amid a blitz of promotional interviews by Lynch and Bragg. ABC's Diane Sawyer interviews Lynch in a prime-time special Tuesday; NBC aired an unauthorized movie about her Sunday.

Besides detailing Lynch's capture and her agonizing recovery -- she suffered extensive broken bones and is slowly learning to walk again -- the book profiles Lynch's family and her hometown of Palestine, W.Va.

It portrays the rural hamlet as a God-fearing place where residents spoke of almost nothing else during Lynch's captivity, and where hope slowly faded that she would be found alive.

When the Defense Department telephoned the good news to the family, Lynch's mother, Dee, threw open her screen door and ran, crying and laughing, through her neighborhood: ``They found my baby! They found my baby! They found my baby!''

And the book includes a love letter written by the man who later become Lynch's fiance, Army Sgt. Ruben Contreras. The letter never found Lynch, and was returned to Contreras unread at Fort Bliss, Texas, the book says.

``You're gonna be all right,'' Contreras wrote to Lynch in the letter. ``If we can make it through this, we can make it through anything.''

Lynch told Bragg she wished the war had never taken place because other soldiers would then be alive -- including Lori Piestewa, a soldier close to Lynch who was killed in the ambush.

``We went and we did our job, and that was to go to the war, but I wish I hadn't done it -- I wish it had never happened,'' Lynch says. ``I'd give four hundred billion dollars. I'd give anything.''

Watched an interview with Jessica on the news a couple days ago. She said pretty much what that article said, but that the rescue did happen.. but she did say that she never fired a shot, and was badly injured in the accident when the vehicle she was in hit another vehicle. She did say that the staff at the hospital were very good to her, and that there never was a Fedeyeen (sp?) in her room or outside it. Lots of other things she said that didn't go along with the version pushed in the news..

That being said, WTH is with the title of this thread??

jsprine@aol.comnothanks (James S. Prine) wrote in
news:20031114132714.17304.00000167@mb-m19.aol.com:

Why is it that cops, firemen, and EMTs feel that they have some kind of patent on working dangerous jobs? I also work at a dangerous job, and I, like any of you, have the same option. If I don't like the danger, I can quit.

You see, I work in heavy industry, around voltages such as 13,800, 4160, 2140, and 480. At these voltages, when things go wrong, people die. I also work around gas streams that are the byproducts of the process. I work around Hydrogen Sulfide, Hydrogen Cyanide, Benzene, and the like. One breath of the first 2 gasses instantly renders you unconscious. More may render you dead. The last is quite carcinogenic. Die now or later, if you will. (an expression, not a threat).

People are crushed, burned, they fall, things fall on them, they are electrocuted, they are gassed. I think, of a working population of about 1200, we average 1.5 deaths a year, the injury rate is quite high, the injuries are not uncommonly serious, many debilitating. People develop cancer, I saw a 33 year old man die of cancer of everything. (liver, bones, pancreas, etc.), he had been married only a couple of years and recently had a child.

There were no 400 car long police escorts for a fallen comrade. The media did not cover the funerals ad nauseam. There were no black wreaths hanging on the plant entrance.

The dead from my plant and industry share something in common with dead police and firemen. They are dead. They died violently, they died unexpectedly.

They differ in that few know that they died. I never thought that we would hear the end of the courageous stories from 911. The police this, the firemen that, etc. The problem with this endless adulation of the public service section is that it masked the courageousness of the citizens that contributed as much or more than the police and firemen.

We are all people, we all have a job to do, and we all have the option of quitting the job if we fear it too much. I respect cops, I listen to the scanner daily, I have a relative that is a cop here. Of the Pittsburgh police, I think they are professional, concerned, able, and overall decent people. One cannot help to share in the humor of their occasional mistakes in speaking or understanding.

We recently had a dispatch for an unruly woman at a Hair Styling Salon, the name of the establishment is Tantrum. The officer said to the

dispatcher "in other words, there is a woman having a tantrum at Tantrum". The dispatcher laughed and said "I was thinking that as well".

I heard a call where the dispatcher said that the car in question had "tinted wendells" (meaning to say windows). The officer called for a confirmation, and said, "did you say that the car has tinted wendells?", and before he had completed his call to the dispatcher, his partner could be heard in a burst of laughter in the background, no doubt incredulous that he had repeated the dispatch verbatim. I don't think that the dispatcher was amused, but she replied "affirmative".

Likely you will take umbrage with this post, so to save myself the recriminations, I have killfiled it.

I make trips to San Diego so I would like to setup one or two banks for
that area.
Does anyone know some Border patrol Freq.'s, FBI, Secret Service or
anything like that?

Also would like to have the light rail or other trains.

TIA,

Burr

I have a Sony ICF-SC1PC computer controlled scanner for auction on eBay:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=14956&item=3058012143

It is in very good condition, and comes with all of the original stuff (plus an improved belt clip).

The auction ends Saturday Nov. 15.

Thanks

Public servants are given the extra attention to help compensate for their low pay. The public does not want to pay them more and they don't want them to quit, thus the extra attention. With other dangerous jobs, such as "Siloliquy's", the pay is not usually determined by the public. In those jobs if they think their pay doesn't compensate for the danger they should take it up with their employer.

Their is also the patriotism angle that we saw with this last war. The public can be made to appreciate the actions of the government more by commending our heroes -- their sons and daughters.

It is nothing more than a tool.

Frank

"Ghost writer" <Spamfree@Spamfree.com> wrote in
news:YVetb.38318$A%3.502959@ord-read.news.verio.net:

I didn't run that fast. I have no problem with the police motorcade or escorts or whatever they refer to them as, or black wreaths, or black bands over the badge, I simply make the point that if police or firefighters feel that their jobs are too dangerous, quit and get another job.

I also feel that worship of police is the wrong thing for society, since their constraints on our behavior is what makes the police necessary to a large degree. In other words, we are not allowed to defend ourselves, or at least discouraged from doing such using lethal means. If we do, even when justified, we will likely be arrested, and processed, and hopefully acquitted. Contrast that to the increasing number of cases of police shooting unarmed citizens, (someone reached for their wallet in N.Y., and was shot 19 times (of 41 shots fired), one of the shots piercing the foot from bottom to top, indicating that the person was lying down at the point that the shot was fired, i.e., he died after being hit the first 12 times or so and dropped like a rock, yet the police continued to shoot at a man armed only with a wallet.) These cops are put on paid leave, then subsequently aquited.

http://www.courttv.com/trials/diallo/index.html

"Officers cleared in Diallo shooting
After 23 hours of deliberations over three days, an Albany jury found all four officers not guilty of all charges in connection with the shooting of Amadou Diallo. The Feb. 25, 2000, verdict sparked protests from supporters of the family, lawmakers and the Rev. Al Sharpton."

http://cgi.cnn.com/US/9902/05/police.shooting/

http://www.refuseandresist.org/resist_this/020699nypdkill.html

These are not the people to be worshipped. Their past indicated problems. All officers are not good people.

NO ACCOUNTABILITY. They wantonly kill, they get a vacation, they get back pay, and they get their former positions.

These are not the kind of people to worship.

http://www.courttv.com/archive/national/diallo/autopsy.html

Read the autopsy report, oops, the officers made a simple mistake, they deprived an unarmed man of his life. Shit happens.

These are not the kind of people to be worshipped.

Support (not worship) honest, hard working, well tempered officers. They exist, by the legions. Oppose the kind of officers described above. Demand that your local police (via your city government) purge this kind of riffraff from their ranks. Don't make the mistake of becoming infatuated with the unfettered support of law enforcement. Accountability is the answer to assure that your friends and relatives survive those inevitable encounters with the law. You wouldn't want your wife or daughter pulled over by the likes of those reprobate officers from N.Y. (those described above, not all N.Y. Officers)

Regards.

I don't believe that it is that simple. I know the danger is there, I just choose to believe that I can manage it. Gambling with a hedged bet, the hedge being assiduous attention to safety and procedures. Working with "greens" (uncomfortable clothing meeting fire resistance standards), respirator or breathing air (SCBA), metatarsal shoes, safety glasses, fall harnesses, gloves, and hard hat.

I could take my pay up with my employer, and I'd be informed that I have the option of quitting, just like police officers do.

The same is true of the police. They don't believe that they will be the ones shot. Hopefully they won't. They hedge their bets with training and discipline. The Pittsburgh Police are supposed to be some of the highest paid officers in the nation. I don't believe that with major police departments, the pay is so low that we need to woo the officers with feigned attention. If the pay is so low, what attracts people to become police anyway? Too many times the wrong thing attracts them. Power.

Of the police, let me say, I do not have the fortitude to see what they see. The end results of rape, domestic violence, murder, auto accidents, broken families, alcoholism, senior citizens living alone and calling the police in the middle of the night from fear of a noise (the police attempting to comfort such people), the ravages of drugs, mentally disturbed poeple, suicides, abandoned children, etc. etc. etc.

I do not have the courage to do their jobs. In some ways it's easier to risk your own life than it is to see others in the throes of loosing theirs.

Even though, Worship should be reserved for God, not cops.

Of your Patriotism angle, read the following:

Hermann Goering, Hitler's Reich-Marshall, speaking at the Nuremberg Trials following WWII

http://www.snopes.com/quotes/goering.htm

"Why of course the people don't want war. Why should some poor slob on a farm want to risk his life in a war when the best he can get out of it is to come back to his farm in one piece? Naturally the common people don't want war neither in Russia, nor in England, nor for that matter in Germany. That is understood. But, after all, it is the leaders of the country who determine the policy and it is always a simple matter to

drag the people along, whether it is a democracy, or a fascist dictatorship, or a parliament, or a communist dictatorship. Voice or no voice, the people can always be brought to the bidding of the leaders. That is easy. All you have to do is tell them they are being attacked, and denounce the peacemakers For lack of patriotism and exposing the country to danger. It works the same in any country."

By this one can infer that blind patriotism essentially makes people chumps. Blind cop worship does the same thing.

>Why is it that cops, firemen, and EMTs feel that they have some kind of
>patent on working dangerous jobs?

I've never thought police work or EMS work was particularly dangerous...I've done both, but firefighters definitely do have a tough and dangerous job.

Certainly no patent on being dangerous of course...I've heard that the Alaskan crab fishermen have the truly dangerous job.

>I also work at a dangerous job, and I,
>like any of you, have the same option. If I don't like the danger, I can
>quit.

Absolutely.

>You see, I work in heavy industry, around voltages such as 13,800, 4160,
>2140, and 480. At these voltages, when things go wrong, people die.
>I
>also work around gas streams that are the byproducts of the process. I
>work around Hydrogen Sulfide, Hydrogen Cyanide, Benzene, and the like.
>One breath of the first 2 gasses instantly renders you unconscious.

>More
>may render you dead. The last is quite carcinogenic. Die now or later, if
>you will. (an expression, not a threat).
>People are crushed, burned, they fall, things fall on them, they are
>electrocuted, they are gassed. I think, of a working population of about
>1200, we average 1.5 deaths a year, the injury rate is quite high, the
>injuries are not uncommonly serious, many debilitating. People develop
>cancer, I saw a 33 year old man die of cancer of everything. (liver,
>bones, pancreas, etc.), he had been married only a couple of years and
>recently had a child.

Granted. Sounds like an environment filled with hazards.

On the other hand, I imagine you are well paid for your work, and have an excellent union, and doubtless an excellent benefits package.

I don't think any of your colleagues were killed in ambush, or need to be concerned with frivilous lawsuits, or are required to pay for their own safety equipment or training. Or have to work two or possibly three jobs to maintain their families. Or have a bunch of untrained people looking over their shoulders and videotaping them as they go about their tasks. I wonder how many of your colleagues blew their brains out or OD'd or drank themselves due to job stress? I could go on and on, but I think you get my point.

>The dead from my plant and industry share something in common with dead
>police and firemen. They are dead. They died violently, they died
>unexpectedly.

Granted.

>The problem with this endless adulation of the
>public service section is that it masked the courageousness of the
>citizens that contributed as much or more than the police and firemen.

I think your perspective is skewed. The cops and firefighters that were killed on 9-11-01 *knew* they were going into harm's way, and many of them knew they wouldn't be coming back. They chose to risk their lives to save others, if possible, and they sure as hell didn't do it for a paycheck or 'adulation'.

>Likely you will take umbrage with this post, so to save myself the
>recriminations, I have killfiled it.

Oh well.

>The same is true of the police. They don't believe that they will be the
>ones shot. Hopefully they won't. They hedge their bets with training and
>discipline.

LOL...my years of training and experience didn't prevent a young man from fracturing my lower spine with his Ford Expedition last year when he tried to kill me. Of course he is suing me now for 'false arrest', which is amusing, considering his propensities and record.

BTW, I'm not working, I've lost my job, and my savings are just about used up. I can always sue my former employer if I have a beef about it, but what's the use?

>If the pay is so low, what attracts people to become
>police anyway?

This is one of those questions that is truthfully answered this way: if you have to be told the answer, you'd never understand it anyway. Of course, some people become public servants to serve their communities, some people like the action, and others have a need to help in whatever way they can. Remember that there are *lots* of reserve police officers, fire fighters, and EMTs who serve *without* any pay or benefits.

>Too many times the wrong thing attracts them. Power.

Power? Are you serious? Are you familiar with the Garrity Rule? No, it's not worth explaining all this to you, you obviously have some sort of problem with authority figures, and it's not up to me to address that issue. But if you sincerely think that people become cops for 'power', you really need some reality.

>Worship should be reserved for God, not cops.

LOL...where do you get these notions? Cops...worshipped? <shaking head in disbelief>.

>Blind cop worship does the same thing.

Wow...you are really interesting.

Soliloquy <Xns9433E8BA526F7invalidinvalidcom@216.168.3.44>...

^ If the pay is so low, what attracts people to become
^ police anyway?

The glory. The recognition as a hero. Just look at the statement that someone else made in response to your message:

"How many lives did you save last week?"

That is what attracts most people to dangerous jobs. If the money isn't there then it is for the glory. So we give them their glory.

Frank

Source record: 24832

I too worked as a civil servant, for a State agency as a matter of fact. However, I didn't work as a firefigher or police officer--I was a highway maintenance worker for my state's Department of Transportation.

People here have mentioned how dangerous that firefighting and police work are, and yes, I do agree. But, have you ever thought about how dangerous highway maintenance work is. Not only is your health threatened by the "everyday" work of things such as: getting squashed by heavy equipment (2 years ago, a collegue was squashed to death when a 20000 pound dump truck accidentally backed over him), injuring yourself with the physically demanding work, risk of skin cancer, and the list goes on and on, just like other jobs...

But, how many of you have ever stood in a highway lane while literally hundreds, if not thousands, of vehicles pass by you at arms-length distances, traveling at speeds of 65-80+ mile per hour! Traffic is going by so often and so fast, that you as a person cannot keep track of it.

And I've heard about job recognition, especially when a worker is killed in the line of duty. It is a proven fact, in my State at least, a highway worker has, by far, a more dangerous job--there are far more highway workers injured and killed on the job than police and fire personnel combined. Here's a thought: in my State, when a State police officer is killed in the line of duty, he/she has a HUGE State-sponsored memorial, and among other things, has an entire freeway named after him/her. However, what does a highway worker get when killed in the line of duty? His/her name included to the growing list of a tiny 2 feet by 2 feet plaque, and that's pretty much it! No memorial, no mention of his name in the news media...

So, these kinds of civil servants receive very little, if any, recognition for how they put their life on the line. Not to mention their tiny salaries, compared to the other "dangerous" civil servant jobs out there. Public servant salaries are public record. Check the websites of any public agency--you'll see. And yes, they do save literally hundreds, if not thousands of lives every day (in a round about way, of course). Would you survive if your car was swallowed up by a 8-foot-deep sink hole while going 70 mph down the freeway? Heck, who do you thing is usually the first on scene of a freeway crash? Highway maintenance workers. Numerous times, I was the first on scene to provide life-saving methods to injured persons...

But, the only public recognition we get is that "one-figered greeting", or the blare of the horn, or even persons stopping to

threaten you. All for making them just a bit late while providing them with an efficient means to drive their prescious vehicles.

Every job has its perks and negatives...

jsprine@aol.comnothanks (James S. Prine) wrote in
news:20031115002849.28603.00000241@mb-m14.aol.com:

I read the post on Highway workers, if you read this (the poster of the topic), your point is well taken.

We are ambushed, just by non-human things. A co-worker, working in the same place that I had all day, with the exception that the mechanics had removed an inspection plate to examine a valve stem, took a breath and fell to the grating (floor), unconscious. The supervisor wasn't sure what to do in the next few seconds, not sure if the man was even breathing. Fortunately, the man began snoring (a good sign of life), and in about 40 seconds, he awoke, looking around, saying "I'm ok". He had fallen with his legs bent behind him. Had he not fallen to the grating and over the side he would have plummeted to his death.

Another co-worker had gone out early in the morning to do his rounds, and he noticed a leak (fluids) into a containment area. When he attempted to start a steam siphon to clear the contaminated water from the area, he instantly fell unconscious, falling off a small wall onto the street. Had he of fallen into the containment area, he would be dead. He laid there unconscious until the gas service (they check the level of toxic gasses throughout the plant) men found him. He was transported to a PGH area hospital, and remained there for several days. His face was quite a mess, as he fell off the wall while standing up. Is an ambush any worse than this, especially if the victim had died?

I was at work one day when a storage tank blew up, casting its top (30 feet in diameter), over the side onto the roadway. A man routinely needs to go to the top of the tanks as part of his rounds. If he had been killed, would he have been any less dead than an officer killed my some maniac? Would it have been any less expected? Is it not an ambush of sorts? The only difference is that with an industrial accident, there will be no backup support, no SWAT team. You run, hope to escape the destruction, and wait for it to stabilize before returning. When your buddy gets connected to 13800 volts (yes, it happened at my plant, though it wasn't my buddy), how does one extricate him? One doesn't. You watch, hope he doesn't completely fry, then get help. The man I speak of lived and returned to work. Another was carrying a pipe that connected to a 69000 Volt line, blowing through his buckle and down his legs, blowing his shoes off. He lived but was unable to return to work, his internal organs having been too seriously injured. My co-workers, being with him, ran when it first occurred. After obtaining safe distance, they realized that their buddy was involved, and returned to him when the sparks were over. No bulletproof vest would help.

Ambush by human means or by mechanical means is the same if the recipient is dead or crippled.

Videotaping, an excellent topic. With the police fetish of taping the perpetrator, and with the availability of small cameras, I feel that police should be required to wear cameras when entering homes or businesses, to preclude those unfounded claims of brutality. If the actions are honorable and according to procedure, why not tape them? This would certainly help to reveal the true way that the police are treated, and help to show the public how difficult their job is.

Of course, there is always the possibility that they don't want the video tapes since they (the tapes) show what abuses the police are capable of. I witnessed the police here after they pulled over a stolen car that contained several black youths. The black youths had been pointing what turned out to be an air pistol at pedestrians as they drove around. The police had the youths on the ground, being held at gun point while that were cuffed. I have no problem with this. What I had a problem with is that the police, after securing the youths in the police car, continued with an inspection of the stolen car. An officer, noticing me standing relatively near, looked at me, and I nodded a hello. He loudly said "where do you live", and I indicated the next street. He then yelled "then go back to where you live". Nevertheless, I moved about 20 feet, then turned and continued to watch. Three officers were pulling packages out of the trunk, and ripping wrapping paper off them, it was Christmas time and whoever owned the car must recently have made purchases. They were looking for stuff to steal. Hell, if they found anything of value, they could blame the black kids for stealing it. The car should have had a cursory inspection then been impounded in toto. They were actually peeking around the trunk periodically to see if anyone was watching. There was another officer in front of the stolen car, they need not fear for their safety, no crowd had gathered. They were paranoid that someone would see them, maybe that someone would FILM them.

How about this:
http://www.cbsnews.com/stories/2003/11/07/national/main582492.shtml
Police raid a high school in South Carolina, hold the students at gun point, arrest others, used canines to terrorize the students, and find nothing. Police need to use their brains. As they are programmed by indoctrination that we are all "their enemies", they are ever willing to do such atrocities as these. Even in Israel, some of the soldiers have enough chutzpah to violate orders and refuse immoral commands. Too many police use the excuse that they are just doing as ordered. No one has the right to violate others in such a manner. They didn't find anything. What assholes. Brave armed men with crew cuts and dogs, corralling the evil teenagers. And you think that these types of schmucks deserve adulation? This was truly sickening. I can see why police abhor cameras.

I grew up with a kid whose father was a commander on the PGH fire department (his father brought the command car home with him in the evening, easy to confirm his status). The kid took me through the house

to show me all the stuff his father had stolen from fires that he had been at. Stereos and the like. All kinds of stuff, piles of it. I guess the firemen feel that insurance will pay for it, but if one doesn't have insurance, and if the stuff was in such excellent condition to be stolen, perhaps they denied the people of items that they may direly have wished to have. Maybe handling all those fire damaged (not) items helped him buy that Corvette that he owned, according to you they get paid very little.

Yes, we have had suicides, yes the job is stressful. Have you tried breathing chemicals all day? Odors so bad that when one is sick with the flu, its intolerable. Noise, have you ever listened to a dozen 1500 HP motors and related equipment running all day, or massive steam leaks? Have you worked 16 hours a day 6 days a week for several weeks (I haven't but many have been compelled to). We have had people apply and get jobs here, the jobs pay reasonably well, only to quit on the spot then they are toured around the plant. It's too frightening for some.

My relative on the Pittsburgh Police said that he worked harder on his first night as a PGH cop than he did the entire time he was a borough cop. What about all the small time cops? Do they automatically get the same adulation without the work?

Of the following, none of them knew that the building was going to fall. Yes, firemen brave truly dangerous situations rather routinely, and yes they entered the building, but they also left as quickly as the others when the first building toppled. By concentrating on the valor of the firemen, we omit recognition of the citizens that also did truly heroic things.

I suggest that you and others support the police, the ones worthy of support, and leave the worship for church.

Oh Well,

Regards

I have, and I've never liked the experience. I well remember one afternoon, while working a scene, that some moron sideswiped me close enough to tear my uniform pants and knock me a few feet back from the point of impact. I was *not* amused.

On another occasion I had my foot crushed, but managed (with difficulty) to complete my assignment before I sought medical help.

LOL...on *another* occasion I was shot in the leg while working a protective detail at a 'peace march'; later, my supervisor asked why I was walking 'kinda funny' and I showed him the wound, and he chewed me out for not reporting it earlier. No big deal.

>Here's a thought: in my State, when a State
>police officer is killed in the line of duty, he/she has a HUGE
>State-sponsored memorial, and among other things, has an entire
>freeway named after him/her.

In Louisiana, I know of a State officer who was run down and killed by a drunk driver, and he got no memorial whatsoever.

I remember this because I used to work with him. His name was Sgt. Gilbert Mast, and his killer, Josh Gimelstob, got the usual 'slap on the wrist' punishment.

You can still read the specifics of that case on the Internet; I know of yet another Louisiana officer who was stabbed to death in the line of duty, but can't find anything on the 'net in reference to it.

Perhaps different States honor their personnel in different ways.

>Not to mention

>jobs out there. Public servant salaries are public record. Check
>the websites of any public agency--you'll see.

So, what's your beef? In my last job, as a State police officer, I had not only the 'regular' duties, but also had to take on the additional responsibilities of Crime Scene Investigator, Intelligence Officer, and High-Tech Crime Investigator, as well as Training Officer.

I got paid for one job, of course, and yes, as you see from public records, I was paid the princely sum of $1367 a month. This was in 2002, by the way.

Plus of course I had to supply my own sidearm, ammunition, etc.

I couldn't afford the medical insurance package, so I did without it.

Yes indeed, all that 'big money' and glory out there, ripe for the taking.

>Heck,
>who do you thing is usually the first on scene of a freeway crash?

The drunk driver and the victim?

>Every job has its perks and negatives...

That's something we both agree on <g>.

Hope you enjoyed the cruise. Wish I had gotten a scanner when I did the same trip along the central coast aboard BC Ferries from Port Hardy to Prince Rupert in 2001.

Had a BC245XLT scanner when I went over to Vancouver Island. Gives a different prespective on things when you're doing part of living in southwestern British Columbia. Being in a ferry line up.

Vancouver city police and most of the fire activty is Pro-Voice so that activity won't be available on a scanner, but there's
lots of marine traffic, plus BC Ferries, and YVR (Vancouver International Airport) and CFB Comox. S

A cheap way to do the same cruise is to drive aboard the Alaska Marine Highway ferry at Bellingham Washington for
the trip to Alaska. No fancy casinos or any of the traditional cruise ship junk.

Be sure to come back for another cruise when you can.

That was me. Never a cop, but I did do volunteer emergency services work,
and I didn't do it for glory or hero worship. I've worked with lots of
cops while doing it, and I never met one who was a cop for glory or
heroism.

Anyone who became a cop (or an emergency services worker) for the glory
would quit in a very short time because of the abuse and drudgery.

Yes public servants can quit when faced with possible death and so can you.
The big difference is that they don't!
In private industry you got any brains you would tell your supervisor that there is a likelihood of you getting injured or killed and refuse to do the job until it was safe.

If you call and tell the police someone is in your house with a gun what do you expect them to do?
What would you do if your neighbor called you some night and told you that?
Would you run over there and confront the intruder or would you tell him to call the police?

I think the big difference is that our public servants are expected not to avoid or run from dangerous situations.
In industry OSHA demands you stop work if you think there is any danger of death or injury.

When was the last time you walked into a bank or store thinking you might get shot?
Every time a police officer in uniform walks in one he damm well better be thinking just that.

Hope this helps explain just a few of the differences between their job and yours.

I think you should examine your motivation in making your statement "How many lives did you save last week?". That statement would probably be made out of jealousy or self-importance. Glory, self-importance, a desire for recognition -- they're all basically the same in this context.

Why do people do dangerous jobs? Either for the glory, the money, or, more rarely, because it is something important that must be done. Most of those who think they are in the latter category only think it. Few people would admit to themselves that they do something only for the glory it brings so they convince themselves that they do it for the reasons that everyone thinks they do it for. This is a defense mechanism that the brain handles with very little, if any, conscious thought. And very few people will readily admit that they do something because they want to be a hero.

For the record, there are no such things as BORN heros. NO ONE in their right mind goes into the EMS/FIRE/POLICE service OR Military for that matter to "BE" a hero. Usually the only "heros" are DEAD heros. ANYONE who goes in to a scene regardless the type with the tunnel vision of becoming a hero, is a hinderance to ALL at the scene. THEY lose track of all training, signs of danger, and thus place themselves and/or many others in danger. SHOULD someone save a life, they may be called a hero.. BUT YOU DON"T GO LOOKING FOR IT. ANYONE who HAS joined the services for that reason are in it for the WRONG reason. AND - I don't know about the other states, but here in PA, it is at last check - 85% VOLUNTEER. WE DO NOT GET PAID to learn how to save lives and property. Our families get little in return if we are disabled or killed in the line of duty and we're no longer able to supply the income. WE DO IT BECAUSE WE CARE. WE NEVER KNOW when that call minor or major as it be, will be our last.

YOU WANT HEROS? Continue to look to the Sports arenas. THEY are too busy trying to be heros. WE who take our jobs seriously - do NOT look to be heros. Give us our due for doing our jobs paid or volunteer and call it a day. G.W.

^ NO ONE in their right mind goes into the EMS/FIRE/POLICE
^ service OR Military for that matter to "BE" a hero.

Whether they are in their "right mind" or not, there are a great many who do. I spent 25 years working in dangerous jobs and being an observer of people and their behaviors I've learned that most people go into a dangerous job for the glory they perceive it will bring them. Once they are in the job and have gone through the education, the training, and the drills much of their desire for glory is suppressed, but there is still enough of it there to keep them from leaving the job.

Frank

The mystical Frank, observer of humanity, sagely penned:

>I spent 25 years working in dangerous jobs and being an observer of people
>and their behaviors I've learned that most people go into a dangerous job for
>the glory they perceive it will bring them.

I wish you'd provide some documentation on this interesting perception of
yours. What exactly did you do, to gain this insight?

Not trying to initiate a flame-war, mind you, but your perceptions and
experiences and mine are diametrically opposed, and it piques my curiosity.

>Once they are in the job and have
>gone through the education, the training, and the drills much of their desire
>for glory is suppressed, but there is still enough of it there to keep them
>from leaving the job.

You know, I've worked for a major municipal police department, and a few
smaller agencies, over the years. Nearly all of the agencies make it clear,
very early in the recruiting process, that glory, acclaim, etc., etc., have
nothing whatever to do with the job and, if one is seeking that, to go
elsewhere and save everyone a lot of time and trouble.

They literally try to persuade everyone from entering the job because of the
perceptions most civilians have about the work, due mainly to television and
idiotic thriller films.

I know that recently a major city department was hiring non-sworn (civilian)
personnel to work as crime scene technicians, and of course they had these
potential employees 'browse' through a color 'scrapbook' detailing exactly what
they'd be facing on the job.

Many of them left at that point, and many others left within the first week of
on-the-job training, which was the best for everyone involved.

Glory? LOL...don't make me laugh.

Again...if you want glory, go into professional sports. Or politics <g>.

I have a new in box Motorola M1225 LS 25-40Watt Mobile Unit,
MINT/UNPROGRAMMED. still with mic and clip, hardware, manual, and safe op
manuals. The split is 450-470 UHF. Never programmed. Photos upon request
Model # M44DGC95A2AA
asking $300.00

Also, 1 pair (2) Motorola 2 channel Radius P110 with good batteries,
antennas, 2 chargers.
Model #'s P44QLC20A2AA

Asking $250 for the set OBO

Will consider trades in part for good working BC780XLT and cash. Photos of
both units available. Postal MO preferred.

"WilleeCue" <n5wrx@stx.rr.com> wrote in
news:rautb.54249$PH6.12890@twister.austin.rr.com:

First, the job is reasonably safe. OSHA cannot insure that a 1500 HP motor, driving 2 stages of compressors, will not throw it's coupler with disastrous results when a compressor fails. It has thrown them through walls, the motor subsequently catching on fire. Heavy industry utilizes complex and potentially dangerous equipment as a requisite to their function. The circuit breakers for the 13800 volt equipment are the size of a refrigerator. Why don't police just insist of their supervisors that their jobs be made safe?

Concerning your second premise, from listening to the police radio, and with Pittsburgh suffering budget problems and police force cuts, I have seen calls go for half an hour before they have someone to dispatch to the scene (a recent call, the first responders from the fire department had come across an accident of a pickup truck hitting a car, and the pickup driver fled by foot. The fireman notified the police on the radio that the perpetrator was running down so and so, but the police replied that they had no units. 20 Minutes later, the fireman called the police again and was informed that there were still no units. Finally 30 minutes later a lieutenant came in on the issue and finally arranged for a car to be sent). Even calls with violence, such as violent domestics, have had to wait 15 minutes or more before a unit is available. In a twist on your issue about calling the police, if I was at home and heard a noise, I get the gun first, and then call the police next. Home invasions are increasingly common here, calling the police will get nothing but someone to write up the report.

Examine the public servants at Columbine that hid outside while students and a teacher bled to death.

http://www.cbsnews.com/stories/2001/12/27/national/main322513.shtml

Where was that bravado that you speak about?

Police, they are no better than the rest of us. They have made a career choice, hopefully they honor their choice by working in a dignified way.

By militarizing the police, they are distanced from the citizens that they supposedly "serve". Some time ago, in a story on Waco, it was

pointed out why local police should handle such issues, not Federal lackeys. Since the local police have to live with the local populations, their actions will be tempered by their desire not to alienate themselves from their communities. Federal lackeys have no such fear, they go home when the "objective" has been achieved.

Few of you seem to find any fault with the police, or in worshipping the police in a manner that people have been taught to worship soldiers. (By this I mean driving people into a patriotic fervor). As I have posted earlier, blind fervor is easily exploited by those in power. That's why I say to "support" the police that honor the job and badge, not worship police collectively. By honoring incompetent police, dishonorable police, or police involved in criminal activity, you dishonor those truly deserving "respect".

I know that in many departments, there is a specific mention of 'cowardice' in the policy manuals, and failing to perform one's assigned duties because of 'fear' is reason for disciplinary action including termination of employment.

And of course, there are specific laws on the books (in certain jurisdictions) that apply specifically to law enforcement officers (including unpaid volunteers), and not other public service personnel, which the non-sworn person doesn't have to bother with.

Check also into the "Garrity Rule", which is highly interesting. After all, who said that one has to give up one's civil rights just because one is employed as a law enforcement official? Most police departments apparently feel that way, hence the "Garrity Rule" for officers.

Err, what precisely is your point, Frank? Obviously, if one thinks something, that person thinks it. Perhaps an exploration of the basics of elementary logic is in order <g>. Or, quote the dictum, "I think, therefore, I exist" (usually mis-translated into "I think, therefore, I am."). But I digress.

>Few people would
>admit to themselves that they do something only for the glory it brings so
>they convince themselves that they do it for the reasons that everyone thinks
>they do it for.

I admit it...I live only for the 'glory' of shoveling the remains of a decomposing suicide victim...and a murder victim...mother and daughter...off a floor in a stifling apartment on a typical August afternoon in New Orleans.

Or the 'glory' of trying to work a scene where the remains of someone's head is literally raining off the ceiling, making the paperwork a wee bit messy, after someone 'checked out' with a 12-gauge shotgun.

I particularly reveled in the 'glory' of recovering two teenaged girls' bodies off the muddy floor of a stinking, polluted lake after they drowned on a hot July afternoon (and yes, this is all documented).

Glory? Not even close, Frank. But these little jobs...and lots, *lots* more..have to be handled by professionals, and it sure as hell isn't for 'glory'...come to think of it, I don't remember anyone asking for my autograph or endorsement after I've emerged, reeking, from a multiple homicide case.

Hero? LOL...that's for sports fans and little kids.

Ghost writer wrote:

You know, many years back, my team was called...our of our jurisdiction...to handle an overturned 18-wheeler blocking a roadway.

When we got there, we discovered that the driver was pinned inside the cab, and screaming for help. The tank...filled with gasoline...had split, and the gasoline was literally pouring out and rapidly filling in the little ditch we were working in, trying to extricate the driver.

It was an extremely interesting experience, trying to get the driver out of the truck and continue breathing in the unbelievable fumes from the gasoline...I was up midway to my shins at one point!

Somehow we got the guy out without anyone (including us) being incinerated; we got him to the hospital for treatment (he did fine), and of course the entire team had to go off duty and discard our ruined clothing.

I think my first shower was an hour long, and I smelled like a fuel farm for a week.

We all got sick from inhaling the gasoline fumes of course, and, as a reward, the driver slapped us with a huge civil suit!

Yes, the intense 'glory' of public service work....the heady feel of being a 'hero'....

LOL

Soliloquy, comparing working in an industrial environment to street police work, wrote;

>Why don't police just insist of their supervisors
>that their jobs be made safe?

LOL...because it's impossible. 'Safety' is, after all, a relative term...I feel 'safer' solo cave diving deep in a Florida cave than I do in early morning traffic, because there are less variables to contend with, and most all of them I've anticipated and have trained and equipped myself to deal with.

Besides, OSHA regulations don't apply to government agencies...including the police.

Simply put, you get the best training and equipment you can afford, and do your best. That's about as safe as you can get.

>I have
>seen calls go for half an hour before they have someone to dispatch to
>the scene

Again, your convoluted logic escapes me. You wrote that Pittsburgh is suffering budget problems and police force cuts, and still, you expect every call for service to be answered as fast as they come in? It's not going to happen; even here, the day watch inraviably rolls out with anywhere from 10-30 calls backlogged. More calls come in than Officers to handle them, and, with budget constraints and police being terminated due to budget cuts, the situation just gets worse. Of course calls get priority dispatching, but it's not the cops' fault if mebbe 10-50 cops are trying to handle perhaps problems emanating from 35,000 to 500,000 people. It's the system...yet of course, you blame the police.

>Even calls with violence, such as violent domestics,
>have had to wait 15 minutes or more before a unit is available.

Yes...there's just so much work that can be accomplished in a given time by a given number of people to handle it.

>In a
>twist on your issue about calling the police, if I was at home and heard
>a noise, I get the gun first, and then call the police next. Home
>invasions are increasingly common here, calling the police will get
>nothing but someone to write up the report.

I think you are being prudent in arming yourself in such a situation. And what of the rural counties where perhaps the nearest law enforcement officer is an hour away? Of course it happens...but do you really think that all of this is

due to the fault of the individual officers?

>Examine the public servants at Columbine that hid outside while students
>and a teacher bled to death.

Those people were following established policies in effect at the time...do you really expect that police agencies have a little book that covers *all* eventualities?

>Police, they are no better than the rest of us. They have made a career
>choice, hopefully they honor their choice by working in a dignified way.

I'm interested in the context and manner in which you might define 'better', but that is another issue. I, too, hope that all law enforcement officials...indeed, every person...performs their jobs/duties in a dignified manner.

>By militarizing the police, they are distanced from the citizens that
>they supposedly "serve".

Wow...talk about bouncing off into a tangent!

Are you now going to raise the hoary old use of the term "serve and protect"? Incidentally, that is a city's motto, not a universal policy for all police all over the nation. Several cities have adopted the motto, but what it means is that police protect the public by serving the law. Look it up if you disagree.

>Some time ago, in a story on Waco, it was
>pointed out why local police should handle such issues, not Federal
>lackeys. Since the local police have to live with the local populations,
>their actions will be tempered by their desire not to alienate
>themselves from their communities.

I personally believe that the Waco incident was completely mishandled, and I agree here with your assessment.

>Few of you seem to find any fault with the police, or in worshipping the
>police in a manner that people have been taught to worship soldiers.

LOL...what is it with you and this constant use of the term 'worship'? I've served in two branches of the U.S. armed forces, and in law enforcement, and if people were worshipping me and my colleagues, I'd sure like to know about it <g>.

By honoring incompetent police, dishonorable
police, or police involved in criminal activity, you dishonor those
truly deserving "respect".

Now, on that, we are on complete and total agreement, sir. Fire the incompetents and prosecute the criminals, by all means.

Cheers....

3 suggestions:
Find the name of the County Fire Chief (Should be on the County's web page) for each county and write to him personally and ask if he knows where you can get a map.

Write to the President of each County's Board of Supervisors and ask if they have such a map that is available to the public.

Contact the O.E.S.(Office of Emergency Services) in Sacramento to see if they have maps available.

Best,
Rich

Just suffice it to say, there is no room in the Police, EMS, Fire OR Military for people who "try" to be HEROES. It only ends up getting them or others killed or seriously hurt. As I said, they in their quest, lose all track of training, danger signals and so on.
IT DOESN'T PAY. You want to be or see a hero, look to sports. You want glory, look to sports or Politics - as another also pointed out as well. IT DOESN'T BELONG in the Emergency or Military areas. People may come in with that in mind, but as one man pointed out, TRAINERS do their damndest to chase that out of the services. WE can't stop people from seeking glory or wanting to be a hero, but we sure don't need them either. As stated, it puts us all at risk. When the tones go off, I do my job. Will I end up a hero? I don't know nor do I care. I go to do the job required. Will I come back alive or unhurt? I don't know, but I can rely on my skills to try to assure that. I'd rather be alive to help another day than to be a hero and risk getting myself or others killed or seriously hurt in the process.

As to budget cuts, most everyone is experiencing them. Crime is up and it will take longer for a response from Police with fewer working. Here, even the State Police are swamped with calls due to providing coverage in areas where local police aren't available - plus their own State assigned areas. They've even had response times of about 45 minutes. Calls are prioritized. They can only do so much and if it is a nasty call, it will tie up more for longer periods of time...

As one man pointed out, where is the "heroism or glory" of scraping up one's remains? THERE ISN'T. I've done it a few times and it is very sad and disgusting. If you get a "thrill" out of that, you got a serious problem.
G.W.

I'm currently based in Louisiana, and government agencies here, including police departments, are still exempt from OSHA regulations.

Of course Louisiana is the oddball State in any event; it is the only State in the country where the laws are based on the old Napoleonic Code while all the other States use English common law.

I understand that the OSHA exemptions might be coming to an end sooner or later, but for the time being...well, there it is.

LOL...between the polluted river water, the polluted marshlands and the polluted air, New Orleans itself should be shut down and sealed off <g>.

The Civil Air Patrol (CAP), an auxiliary of the U. S. Air Force,
has conducted several drills on the
two frequencies attributed to them , CH 1 148.150 and CH 2 148.125,
with a PL for the
New Hampshire wing of 136.5 hz (Mass Wing and others may us the PL
tone of 100.00 hz)
this past month in Southern New Hampshire.

Yesterday is the first time received traffic on 148.125 simplex
here in New Hampshire.

This is in addition to CAP missions, going out on the occasional
search for Emergency Locator Beacon., that have come up on the air on
148.15 repeater, over the past several years. I do not have the VHF-AM
air band allocations for the CAP in any of my radios and when they were
entered
into the radios didn't hear much on the air band form the folks in CAP.

I will be loading those CAP AM air band SAR frequencies which are
readily available at different sites
on the web, into the ICOM IC R-2 to see if they may have search and
rescue mission or drill traffic along
with what's coming across the CAP VHF-FM channels.

These two CAP frequencies also are heavily used at air shows. They
seem to be in the "repeater talk around"
simplex mode. Along with FRS Handy Talkies.
Checking the FRS band when hearing activity on the "official" CAP
channels may yield
other communications, the CAP Cadets and their adult officers appear to
use FRS radios.

The FRS band is a good place to check for other groups like scouts
and Law Enforcement- Fire
Explorers, too. Nothing has shown up on the 390 MHz-FM Military (FRS
like) intersquad band. This 14 channel
UHF-FM band has been checked over the last two air show seasons!
Jim

Dear Friends and Family:

I hope that you will spare me a few minutes of your time to tell you about something that I saw on Monday, October 27.

I had been attending a conference in Annapolis and was coming home on Sunday.

As you may recall, Los Angeles International Airport was closed on Sunday, October 26, because of the fires that affected air traffic control. Accordingly, my flight, and many others, were canceled and I wound up spending a night in Baltimore.

My story begins the next day.

When I went to check in at the United counter Monday morning I saw a lot of soldiers home from Iraq. Most were very young and all had on their desert camouflage uniforms. This was as change from earlier, when they had to buy civilian clothes in Kuwait to fly home. It was a visible reminder that we are in a war. It probably was pretty close to what train terminals were like in World War II.

Many people were stopping the troops to talk to them, asking them questions in the Starbucks line or just saying "Welcome Home." In addition to all the flights that had been canceled on Sunday, the weather was terrible in Baltimore and the flights were backed up. So, there were a lot of unhappy people in the terminal trying to get home, but nobody that I saw gave the soldiers a bad time.

By the afternoon, one plane to Denver had been delayed several hours. United personnel kept asking for volunteers to give up their seats and take another flight. They weren't getting many takers.

Finally, a United spokeswoman got on the PA and said this, "Folks. As you can see, there are a lot of soldiers in the waiting area. They only have 14 days of leave and we're trying to get them where they need to go without spending any more time in an airport then they have to. We sold them all tickets, knowing we would oversell the flight. If we can, we want to get them all on this flight. We want all the soldiers to know that we respect what you're doing, we are here for you and we love you."

At that, the entire terminal of cranky, tired, travel-weary people, a cross-section of America, broke into sustained and heartfelt applause. The soldiers looked surprised and very modest. Most of them just looked at their boots. Many of us were wiping away tears.

And, yes, people lined up to take the later flight and all the soldiers went to Denver on that flight.

That little moment made me proud to be an American, and also told me why we will win this war.

If you want to send my little story on to your friends and family, feel free. This is not some urban legend. I was there, I was part of it, I saw it happen.

2873. An Additional Quest. Re Step-Sizes On This: Re: Scanner Setup Help Please?

Newsgroup: rec.radio.scanner

Hi,
Let me also please ask a question here that I too have wondered about. Am new at this.

a. Is it the total frequency that has to be divisible, evenly, by the step size?

e.g. 26.970, rather than just the part after the decimal point (e.g. .970) ?

b. Also: where does the incrementing of the step start from ?

Is it the beginning of the search range you set, or is it some othere criteria ?

If you don't enter a range, but just frequencies in a Bank, but do have Step-Sizes entered, what happens now ?
Are they still used ? How ?

Thanks,
R.

Soliloquy wrote:
>We are ambushed, just by non-human things.

Quite frankly, I find it fascinating, yet rather odd, that you'd have the audacity to compare inanimate objects with the workings of malicious human beings.

No one has ever said (certainly not I) that working in industrial plants was entirely safe...quite the contrary.

I've worked in an industrial plant myself...Amax Nickel Refining Company, in the Ammonium Nitrate division (Area 13...lovely number!), and know how nasty things can get. I had more than a few close shaves there, including narrowly missing falling into a vessel filled with ammonia (the fumes literally consumed my coveralls and I passed out while I was attempting to 'gauge' the tank), and falling through a roof into a burning building while fighting a fire.

>Is it not an ambush of sorts?

No, no, it's not an ambush of any sorts. Inanimate objects do not act from free will, and so, cannot 'ambush'.

>The only difference is that with an industrial accident, there
>will be no backup support, no SWAT team.

Wow...here in Louisiana, the industrial plants are required to have their own fire departments, HAZMAT units, medics, etc. And, it might interest you that not every law enforcement agency has its own SWAT team...small municipal departments cannot afford them in any event...and depending upon a State or County team might take far too long to be of any benefit.

>Ambush by human means or by mechanical means is the same if the
>recipient is dead or crippled.

My dictionary defines 'ambush' as 'a deployment of persons in hiding to make a surprise attack', and I'll have to go along with the dictionary in this issue.

>With the police fetish of taping the
>perpetrator

Fetish? I understood that videotaping perpetrators was to simply provide an 'unbiased witness', so to speak, during public contacts. A 'fetish' denotes something entirely different.

>I feel that
>police should be required to wear cameras when entering homes or
>businesses, to preclude those unfounded claims of brutality. If the
>actions are honorable and according to procedure, why not tape them?

An interesting idea. But, would you like public service officials entering your home and videotaping everything you do and say, the appearance of your home and furnishings, etc? And, who would store the tapes, administer them, etc? How long would they be kept? Would the video records have to be shared with other government agencies, such as the IRS, Family Services, and so on? Opens a lot of cans of worms, does it not?

>Of course, there is always the possibility that they don't want the
>video tapes since they (the tapes) show what abuses the police are
>capable of.

LOL...being human beings, I imagine 'the police' are as capable of stupid, silly, dangerous, or occasionally criminal behavior, as anyone else. But your suggeston that 'the police' are afraid of being videotaped while performing their duties doesn't necessarily hold much water.

>What I had a
>problem with is that the police, after securing the youths in the police
>car, continued with an inspection of the stolen car.

Why? Was the vehicle impounded? Prior to being 'towed', or even sealed, the police are invariably required to inventory the vehicle and its contents.

>Three officers
>were pulling packages out of the trunk, and ripping wrapping paper off
>them, it was Christmas time and whoever owned the car must recently have
>made purchases. They were looking for stuff to steal.

Really? Did you see any of the Officers steal anything, or is that just your hunch? If you thought the Officers were trying to steal the items, why didn't you obtain whatever information was available about them, and make an official complaint, or call your local media?

>Hell, if they
>found anything of value, they could blame the black kids for stealing
>it.

LOL...you can't have it both ways. The black kids in the stolen car *had* already stolen the property. It had to be identified and undoubtedly inventoried. There might have been information (not known to you) about one (or more) of the packages inside the car that the police were trying to locate. You didn't have all the available facts, but you immediately jump to the conclusion that the police were trying to steal things.

>They were actually peeking around the trunk periodically to see if
>anyone was watching.

Yes, it's called 'situational awareness', for one thing. How did 'the police' know that a backup team of punks might not have showed up to ambush them and set their colleagues free? Sounds crazy, doesn't it, but we're finding out more and more that gangs of thieves are acting in concert, with tactics, communications, and weaponry available to facilitate all sorts of nasty things.

>There was another officer in front of the stolen
>car, they need not fear for their safety, no crowd had gathered.

LOL...it doesn't take 'a crowd' to fire a shot from a roof or a window, or to initiate a drive-by shooting.

>They
>were paranoid that someone would see them, maybe that someone would FILM
>them.

Actually, if seems that the paranoia in this incident is emanating from you.

>Police need to use their brains. As they are programmed by
>indoctrination that we are all "their enemies", they are ever willing to
>do such atrocities as these.

Interesting, and yes, apparently I was correct about assuming that you are more than a little paranoid. In the 'high school raid' in S.C. that you mentioned, even you admitted that arrests had been made, yet you add that police dogs were used to 'terrorize' the students, etc. You read an article, and take it as gospel. Interesting indeed.

>Even in Israel, some of the soldiers have
>enough chutzpah to violate orders and refuse immoral commands.

My goodness....now you're equating foreign soldiers' actions with those of American police officers! Unreal.

>Too many
>police use the excuse that they are just doing as ordered.

Ok...provide some documentation...names, dates, places. Prove it.

>No one has
>the right to violate others in such a manner. They didn't find anything.
>What assholes. Brave armed men with crew cuts and dogs, corralling the
>evil teenagers.

Oh, we're back to South Carolina again? Sorry, I thought we were still in Isreal with the I.D.F. Sorry, my mistake <g>. As you wrote, arrests *had* been made, so, what's your beef? That the teenagers had been 'terrorized' by the police? I say again, you read an article, no doubt a totally UNbiased article, and you feel that it is totally factual. Okay, you live in your little world, and let the rest of us live in ours, amigo.

>This was truly sickening. I can see why police abhor cameras.

Again, an unfounded assertation unproven by fact.

>I grew up with a kid whose father was a commander on the PGH fire
>department...

Remainder snipped for brevity...so now, the actions of a Fire Department official many years ago are the basis of your problem with authority ficgures, specifically, the police? If you knew that the man had stolen property in his home, why didn't you say something it when it could have done some good, rather than rant about it years later?

>Yes, we have had suicides, yes the job is stressful. Have you tried
>breathing chemicals all day?

Er, yes. I live in Louisiana, where our atmosphere reeks 24/7 from the nearby chemical and refining plants...they don't call my neighborhood 'cancer alley' for nothing <g>.

>Have you worked 16 hours a day 6 days a week for several weeks (I
>haven't but many have been compelled to).

Yes, I actually have pulled tours like that...for months on end. I really like the 'days off' which you have to spend in Court after working 16 hours, or attending mandatory training, etc.

>What about all the small time cops? Do they automatically get the
>same adulation without the work?

LOL...there you go again, with 'adulation' and I guess you'll be referring to 'worshipping cops', etc., again.

>Of the following, none of them knew that the building was going to fall.

WRONG! Many of the NYFD members knew that the buildings *were* going to fall, it was just a matter of time. Radio transmissions from the doomed men inside the towers have confirmed this.

>By concentrating on the valor of the
>firemen, we omit recognition of the citizens that also did truly heroic
>things.

Nonsense! I think everyone out there, in whatever capacity, performed well that day...and in the horrendous days that followed. Except of course the thieves and looters.

>I suggest that you and others support the police, the ones worthy of
>support, and leave the worship for church.

I can make some suggestions for you, too, but doubt that they'd make much difference <g>.

> -- they're all basically the same in this context.

I've been on the scene when a firefighter saved a life by pulling someone from a burning building. I've also been there when firefighters cried because they couldn't pull someone, or discovered a lifeless body. I can tell you that the latter guys weren't crying because of missed glory. I can tell you that the former guys won't even mention having saved those lives, any more than they'd brag about having put out a garbage-can fire; either was just part of what they do. If you ask them for stories, they'll tell you about a close call they had in a fire, or a fire that was particularly tough to put out.

> Why do people do dangerous jobs? Either for the glory, the money, or, more
> rarely, because it is something important that must be done.

I think that's a LOT less rare than you think. Now, combine that thought with the idea of having seen what happens when no trained personnel are available to help.

You know, you just stimulated a memory that may be the reason I got into emergency services. I was a kid doing a little shopping. I walked out of a store and saw a crowd at the corner (two busy streets); they were standing around two little old ladies who were lying on the ground. I asked someone and found out they'd been grazed by a speeding car. My first thought was to be flabbergasted that all these people were staring and not one was helping. So I did what I would have hoped someone would already have been doing by then; I started giving orders. You, go to that pay phone at that store and call an ambulance. You, lay that coat you're holding on one of those women, they're shivering. You, stand there and point so cars will go in the other lane. Lady, can you move your feet. And so on. I wasn't a hero, I was the guy covering the omission. It was all stuff someone had to do and no one was doing it.

> Most of those
> who think they are in the latter category only think it. Few people would
> admit to themselves that they do something only for the glory it brings so

> they convince themselves that they do it for the reasons that everyone thinks
> they do it for. This is a defense mechanism that the brain handles with very
> little, if any, conscious thought. And very few people will readily admit
> that they do something because they want to be a hero.

I've been in the "hero" spot once or twice and all it does is confuse me.
I'm not talking about the old ladies; these weren't nearly as serious.
It never seemed to me that I had done anything exceptional at all, and
I didn't feel I deserved any special recognition for what I had done.
To me, it seemed like any other little task I'd done, it just happened
to be one that looked really cool to onlookers or something.

And as I said, the crap outnumbers the glory about a hundred to one.
If I were in it for the glory, I'd have quit after about the first
thousand "fuck you" or the first hundred threats of bodily harm (which
would have been about six months). Amazing how people act when you won't
let them park in the handicapped parking because they don't feel like
walking far.

And if you ask me for stories, my favorites are ones like the guy who
tried to double-talk me to get past the barricades to park closer to
the church festival. Or the time someone pulled up to another person's
checkpoint and introduced himself as the director of our emergency
services group to get in (we sent the director to meet him). Or the
time the director let one slip on the radio; we had a particularly
abusive person demanding to park in handicapped (he wasn't), and sent
the director to handle it. When the abuser demanded a cop, the director
pulled out his police badge. (Full-time cop.) When he pulled away, the
director forgot himself and said over the radio, "Cancel the tow, the
stroke left."

And you'll hear no respect, honor, worship or other adulation for them
from me. I've run into more than my share of bad cops; one of them gave
me my first speeding ticket. (He was thrown off the force before my
court date; the cop, not the force, was bad.) I hated cops for a long
time before I saw one thoroughly abused; that's what made me rethink my
feelings, and working with some really good cops in my emerg. svcs. work
has shown me the other side.

And I still run into the occasional bad egg, and they don't get no respect.

I almost pooped my pants when we were taught the Illinois regulations for driving with lights and sirens. The laws are such that if a car "driving code" is sitting at a full stop and some drunk loses control, spins out, rolls over, and hits him, the guy with the lights and sirens is responsible. Fortunately, the courts hold otherwise if there's any evidence that the "code" car wasn't responsible.

We had an anxious night once. Our lighting vehicle was "running code" to a fire. Some a**hole was drifting him to get through traffic. When our guy obeyed the law and came to a nearly complete stop before crossing an intersection, the a**hole rear-ended him. We all shook in his boots until an eyewitness came forward that night.

It's much the same in Louisiana...no matter who is truly at fault in a given situation, the police are nearly always held responsible, as far as civil liabilities, etc.

Really makes you want to run around and help people, eh?

I think the Thomas Map books show all of the fire stations. Then you can go to various websites to get the station numbers. (One good website is freqofnature.com - look for Fire Station Locater - also do a google search for Southern California Fire - there is another good website out there that lists all the fire stations in all the south Calif counties.) If you cant find it, drop me a note.

Yes, but they're test equipment accessories, and expensive.

Look at www.avcomofva.com under Analyzer Accessories.

They will downconvert the specified frequencies to 1-1000 megacycles
as covered by their PSA-65C spectrum analyzer. Will work with
anything, but you would have to add your own 12VDC. Whatever modes
your receiver can demodulate will be the same.

Do a Google search on the part number for sources to buy. Prices seem
to be fixed, and Avcom doesn't sell direct.

Sensitivity is pretty good on the things.

Burr;

Is there any information on the map legend
to indicate who publishes the fire map you already have?
If you would like on line topo maps try

<http://www.maptech.com>

I realize lots of folks do not want or need the in depth
detail of a topo map, however they sometimes have the
location of fire stations on them.

And here's another source of maps

<http://www.maptown.com/maldivesmaps.html>

this site has links to other map resources.

I know the area very well. I live about 5 miles inland, in the
Oceanside-Vista border area. I often go to the beach and probably
pass buy your old home many times.

It's still great over here... apart from the Firestorm that we had
earlier in the month. I am certain that if you visited the area
today, you will notice the following:

1. Green spaces are getting smaller (more people ;-)

2. Traffic is hell (no major improvements to the infrastructure)

3. Housing costs are "out of this world". A shed over here would
get me an estate in many other parts of the country ;-)

But apart from that, SoCal is still one of the best areas to live
in... if you can afford it!

2902. WFM vs FM Mode?

Newsgroup: rec.radio.scanner
Date: 2003-11-17 16:00:02 UTC
From: Bob <rljames@hotmail.com>
Message-ID: <Xns94366FE5EFFEErljameshotmailcom@208.34.105.14>
Source record: 24705

Why would the same signal (around 900 Mhz) received on one radio, an AOR AR8600, be heard best in WFM while FM seems to be the mode of choice on an ICOM 8500? The two radios react almost exactly opposite of each other, clear reception on AOR using WFM and noisy, no signal FM. No ICOM signal received using WFM and distorted but intelligible FM. Same antenna, an AOR MA500 sitting on an indoors windowsill.

I *think* the AR8600 uses 150kHz and 25kHz bandwidths respectively for what AOR terms WFM and NFM while the ICOM is 150kHz for WFM and 12kHz for FM "normal". If (and believe me this is a big if) I understand Frequency Modulation in general correctly I can see why ICOM FM narrow might differ from AOR NFM but not the apparently identical WFMs.

Thanx,
Bob

I can't say I've ever seen anyone in a public-safety job for more than
six months who meets your description. I've seen a few who lasted a
shorter time, but they quit fast.

> And as I said, much of that is suppressed in most people after
> their education and training. In addition, since you brought it up, the

I've seen one or two who started for glory and remained for service after
finding out the glory is too infrequent and too expensive.

Taking a job for glory, and finding out one doesn't get much (if any),
most would probably quit the job.

> ^ >Frank:

> Were we discussing you or are you seeking glory?

This is a serious question. How did you get glory-seeking out of what I said there? I said I'd had the glory seat once or twice and didn't WANT it. It felt phony, undeserved. It's like getting cheered for pulling a number from the little gizmo at the butcher shop ("now serving no. 23"). It's like getting an award for putting your empty coffee cup in the sink.

^ for more than six months who meets your description. I've
^ seen a few who lasted a shorter time, but they quit fast.

That statement is consistent with what I have been describing. Unless you're examining these people during the initial screening process or during their initial training you are not likely to see any.

^ This is a serious question. How did you get glory-seeking
^ out of what I said there?

I didn't, but early in this discussion you asked "how many lives have you saved?" (which implies "you don't know what you're talking about, you're not one of us") then in your previous message you proceed to describe some of the super things that you've done. These are not definitive but they are indicators that you want people to know that you've done some great things. Why do people want others to know that they've done great things? Most people who want this sort of attention don't come right out and say something like "look at how good I am, I save lives daily!". They would be scorned if they did so they learn to disguise their effort in a way just like you did. I personally would have chosen another person to use as an example.

^ I said I'd had the glory seat once or twice and didn't
^ WANT it.

True, but you receive more glory by saying those things and then stating that you don't want glory because of them.

Thanks,
Except for a few scanners in the thousand dollar range most scanners top out at 1.3ghz to 1.5ghz. I find it hard to believe that I am the only one looking for a downconventer in the 2.4ghz range. A google search yields very little. There are so many cheap devices using 2.4ghz, why is it so hard for someone to develop a cheap 2.4 downconverter?

Source record: 24719

The PRO-90 is as good as any other Police scanner that will cover
the 108 to 136 Mhz AM air band. It has the air band pre-programmed
into it's
SERVICE SEARCH feature.

I us the PRO-90 for 800 Mhz trunk tracking! It will only work one
(1) 800 Mhz
Motorola trunking system at a time.The PRO-90 dose not do VHF, 900 Mhz
and EDASC also it
will noit do conventional at the same time, that its trunk tracking the
one 800 Mhz system!

It dose not have independent mode so you can't do AM in
the 138 to 144 Military air band where the US Air Force Thunderbirds
jet air demonstration team hangs out, during air shows!
The going price for a PRO-90 used is $75 to $100.
Check this site for more information:

>dead or still in use?

NOAA 12, 15 & 17 are active. Sometimes 12 or 15 bump freqs so one or
the other may be turned off for a short while until their passes
separate.

NOAA 17 is very strong and easy to copy with stunning results. The
others are not as strong but perfectly adequate.

The Hamtronics receiver practically builds itself, works great and has
been trouble free for my wife for 2 years. A Woodhouse turnstile
antenna is cheap and simple and if you can keep the feedline under 100
feet or so of RG8X you won't need a preamp.

My wife uses Wxtoimg software, free w/ voluntary donations. Google for
all sources. We have less than $300 in our system not counting the
computer, did it in an easy weekend, and get 4-6 passes a day.

It's worth doing. We're in the woods, in a valley with only a narrow
view of the sky with the antenna 8 feet above a one story roof and we
still get plenty of passes. Even better in the fall and winter when
the leaves aren't on the trees.

Look up APT (Automatic Picture Transmission) on the web and you'll
find plenty of links.

I don't believe I've saved any lives. But I didn't burst in here bragging
about how dangerous my surroundings are and try to use that to diminish
the contribution of public safety personnel to society.

The one case is a greedy company violating the rules and endangering
employees to save a few cents. The other case is people doing a job
that *can't* be made non-dangerous, to save lives and protect people
and things. I don't see a comparison. So I pulled out one of many of
the things I saw wrong with the comparison.

> Why do people want others to know that they've done great things? Most people
> who want this sort of attention don't come right out and say something like
> "look at how good I am, I save lives daily!".

Some doctors might save lives daily. No cop, fireman, ESDA worker,
paramedic, or other public safety person would even try to tell you he
did. The cops are doing paperwork; the firemen are washing hoses; the
ESDA workers are lugging traffic cones and the paramedics are counting
stock in the ambulance.

> They would be scorned if they
> did so they learn to disguise their effort in a way just like you did. I

You'd only see glory in such stories and claim false modesty for me.

> ^ I said I'd had the glory seat once or twice and didn't
> ^ WANT it.
>
> True, but you receive more glory by saying those things and then stating that
> you don't want glory because of them.

You don't get the glory if you don't tell anyone what the glory should
be for. So far all I've mentioned is having someone call an ambulance.
I got the hero tag for entirely different things, which really aren't
worthy of mention.

There's really no sense trying to convince you. You somehow see glory in those jobs. If you really wanted facts and a dose of reality, I'd tell you to ask a local police department to do a ride-along so you could see first-hand what your "glory" is like. But I think you'd rather look on from a distance and equate your imagination to reality.

FAE LLV#11 <97eda5f.0311172232.2536be37@posting.google.com>...

^ Can I program the talkgroup #'s (ie 04-021) or do I need
^ to program the frequencies.

You need to enter (program) the frequencies beginning with channel 1 (skipping channel 0) of your radio. These frequencies need to be in the designated order and if a channel is skipped it must also be skipped in your radio. For example, if you have five frequencies, with channel 3 being skipped, and wish to enter them in bank 2 of a PR0-95:

200
201 800.1231 (logical channel 1)
202 800.1232 (logical channel 2)
203 (logical channel 3 not used)
204 800.1233 (logical channel 4)
205 800.1234 (logical channel 5)
206 800.1235 (logical channel 6)

In the Radio Shack scanners each channel would be assigned the "ED" mode and the entire bank would be assigned the "EDACS" mode. Then, beginning with channel 207, you could enter conventional channels of mode AM or FM, though I would leave 207-210 open for system expansion. If you enter busy frequencies (i.e. NOAA Wx, mode FM) into the blank channels (203, 207-210) you will know if the system is expanded sometime in the future when you hear a weather transmission in the middle of some other discussion.

^ If I do the freqs how can I asociate them with the talkgroup
^ numbers?

Talk groups are entered in a different way. With the Radio Shack scanners (93, 95) press PROGRAM, TRUNK, then enter each ID and a text label for each ID. These ID's are the actual communications channels that, with conventional systems, were handled by a single frequency.

The easiest way to enter IDs is to wait until the radio stops on one you wish to monitor, then press TRUNK. The radio will add that ID to its list and you could later assign it a label if you wish.

Hello and thanks for reading,

I have a Uniden BC250D hahdheld scanner with the digital decoder card, 2 extra 2000mah battery packs, standard pack, wall charger, PC cable, manual and box. The radio works great and looks like 9.5 out of 10.

Will ship to your front door for $525, payment by postal money order or Paypal. If you use paypal add 3% for their fees.

Email me direct at nmar@earthlink.net

GOES are synchronous sats. NOAA-XX are LEO (Low Earth Orbit). The NOAA
series are easier to copy as they operate in 13X megacycles where the
GOES birds are around 16XX something and need a fixed dish and a
downconverter. Not practical for us buried in the woods as we don't
see much of the sky, but we get the APT sats fine.

^ Frank, how woud you do this? "the entire bank would be
^ assigned the "EDACS" mode". I can't see a way to do this
^ in the manual.

My memory was incorrect; the mode is abbreviated "ED" instead of "EDACS".
When in MANUAL mode on any channel in the applicable bank press PROGRAM,
TRUNK, then MODE as many time as is needed to set the mode to ED. The options
on my radio are "Not trunked", "MOT", and "ED".

==========

You didnt say whether you would be using the 2 mtr antenna for
xmitting. If both are for recieving the antenna placment wont make
much difference. If you are going to be xmitting on the 2 mtr antenna
then the other antenna "should" be 1/4 wavelength away from it in
order for it not to ineract with it. For 2 meters that would be about
19"s. As long as the antennas are above the flue itself that wont be a
problem. If you are going to be xmitting on the 2 mtr.ant. you're
going to have some significant rf induced into the other antenna, so you
might want to keep that in mind when operating.

You answered it wrong. It's because the guy in the dangerous job should
really be reporting his employer for the dangerous working conditions
so the law can be enforced, but chooses instead to keep his mouth shut
and let the abuse continue so as not to endanger his paycheck. Whether
that's a valid choice or not I won't debate; but it ain't a choice
worthy of glory.

There *is* glory in lots of dangerous jobs that are dangerous by nature
rather than by employer neglect. Take the guys who put out oil-well
fires, for instance: <http://www.redadair.com/thriller.html>. Or the
guys who work on million-volt power distribution lines. Or the guys
who work on live transmitter antenna sites.

Crystals are available. Some places even stock a few. And the frequencies
the scanner can pick up probably are limited because modern freqs weren't
in wide use when it was made. You might be better off spending that crystal
money on a flea-market or garage-sale scanner, or watching local newspaper
ads. Anyway, if the scanner was owned locally, there might be some
interesting freqs in there when you get it.

If your planing to xmit with the two meter antenna then disconnect the receiver
from the other antenna's co-ax cable at the receiver input while transmitting
This will avoid e transmitter Radio Frequency energy (rf) burn out in the receive. A
co-ax switch at the receiver's antenna jack would be a good way to keep the rf out if the receiver.
Just remember to switch the receiver antenna off or out of the co-ax line.

There was a 'professional' grade scanner made for emergency vehicles that had this antenna switch
in the form of a pull down relay built into the scanner. It was activated by a cord that would go to a
connector on so equipped transceivers collocated in the emergency vehicle. So when the mike was
'keyed' the scanners antenna would be cut out to avoid rf burn out!

If you're remembering the Uniden MR-8100 - if I remember it correctly
it was simply a speaker mute - it did not disconnect the antenna. It
was simply there to prevent audio feedback....

>From Bob Seydler, K5GNA:

I now have brand new, modified TranSystem AIDC 3731 downconverters that have
been retuned on a NF meter to have a noise figure of better than 1.1 dB and
a
passband of about 2400 - 2586 MHZ. The image rejection has been measured at
better than 50 dB. They only come with an N adapter and the length has been
cut down, so do not have the mounting area in the rear to mount in the focus
of a dish like the 3733's will. They are smaller and are made to mount
directly on an N connector.

The total bandwidth is wider than my modified 3733's with the Murata filter, being about 186 MHZ instead of 85 MHZ. But, the front end combline filter at
the antenna is much narrower than the 3733's and will provide some better isolation from your uplink transmitter.

I am selling them ready to go for $70.00 each with the 123 MHZ output. You can order them directly from me -- PLEASE CONTACT ME AT k5gna@aol.com. I have them listed on Ebay for easy viewing. You can see the picture and get a
better description -- here is the URL:

http://cgi6.ebay.com/aw-cgi/eBayISAPI.dll?MfcISAPICommand=ViewListedItems&;

Not sure how wide a BW you want to monitor, but you can p/u a CATV MMDS down converter for under $50. I have some around here somewhere. The amateurs use them to receive AO-40 satellites - they down convert to the VHF HI band.

I am one of those firefighters who have seen some horrific scenes, and I tell you, it would take a real cold-hearted prick to not feel something when a scene has gotten bad as listed below. Most firefighters are caring human beings, who are doing the job because they love the type of work and care about their fellow man. After all, with the risk, and lack of pay that they possibly could earn in other jobs, why else would they do that type of work?

If a firefighter is ecstatic after a scene when well, that is because the rush of doing what they do has not been dampened by a fatality or drastic loss.

I am man enough to admit that there has been a couple of scenes that afterward, later that evening I actually cried a bit. The worst calls to go on is where a kid is lost! That really gets to a person!

Hello,

I bought a pair of above FRS in US and using it in an Asian country.
Catalogue says it can be used for 6 miles but when I checked the range
it was not more than a mile. Has anyone used a 6 mile range FRS and
what is the actual range that works. Are these manufacturer’s
lying us or have I got something messed-up.

Thanks,
Karl

Two really important factors involved: 1) where you and your rig are in relation to where AF1 is, and 2) what frequencies you were monitoring. pcox

The materials often say something like "up to 6 miles, depending on
terrain and conditions."

> it was not more than a mile. Has anyone used a 6 mile range FRS and

I would say that you are getting typical distance from the radios.

> what is the actual range that works. Are these manufacturer’s
> lying us or have I got something messed-up.

I have gotten longer range on FRS, but I was on a filled in lake bed that
was flat for a few hundred thousand acres. I didn't go out 5 or 6 miles to
test it, but I would guess the range might extend that far in that
terrain. You have not got somethinge messed up, and you are getting typical
distance for the radios in normal terrain and conditions.

FAE LLV#11 <97eda5f.0311181940.2e3b4976@posting.google.com>...

^ I'm a little confused here.....there are at maximum 10
^ freqs per group.

What's a group? I'll assume it is a group of frequencies assigned to a communications subsystem.

^ However there are approx. 40 channels listed.

What is a channel? Normally "channel" refers to a communications path. Historically a channel was either a single frequency for either simplex or half-duplex communications, or two frequencies for full-duplex communications. Today there are several other types of channels. In a trunking system the talk group is the channel. The radio operator selects the talk group with a channel selector and the computer system spreads those communications over one or more frequencies. Those frequencies are the "group" referred to above. The frequencies are entered into the computer, and the scanner, in a certain order and are assigned numbers indicating that order. These are then referred to as "logical channels".

^ What is my best approach for identifying all 40 channels?

What do you mean by "identify"? Identify the function of the talk group (channel) or identify the talk group code?

You can find all the talk groups that are being used by leaving the scan bank in the open mode (FUNC 5). This will scan all channels (talk groups). When the radio stops on a channel in use the talk group code will appear on the display. If you press TRUNK while it is being displayed the radio will enter that talk group into its list of talk groups. Then if you set the bank to the closed mode (FUNC 5 again), only those talk groups in the list will be listened for (unless they are locked out).

When a bank is "open" a + (plus) is displayed below the bank number in scan mode. When the bank is "closed" a - (minus) will be displayed instead.

When a bank is set to ED (EDACS) mode you can still enter other non-trunking (conventional) frequencies in that same bank following the trunking frequencies and those conventional frequencies will be scanned normally. Open and closed do not affect conventional frequencies in the bank, it only affects the trunking talk groups.

If you have trunking frequencies (marked as mode ED or not) and the bank is not set to mode ED, those frequencies will be treated as if they were conventional and the trunking system will not follow channels (talk groups). For trunking to work the bank must be set to ED (PROGRAM, TRUNK, MODE).

If by "identify" you meant the function of a talk group (channel) then that is done either by listening to the channels and figuring it out on your own or by getting a list from some one who knows.

I hope I've answered your question in there somewhere.

Frank

Ok let me try this again.....there are 6 groups of freqs. for the
riverside county sheriffs dept. these are apparently broken down by
repeater sites. each has a channel "1" in them. If I wanted to monitor
more than 1 group of freqs. for a different geographical area. Would i
need to put them in a different bank to keep with the channel 1 being
first in the bank? I found the information for the DEC display for the
edacs on another website, at least I have an idea of whos talking now.

If go to www.rvcfire.org they have a listing of all the stations and
addresses for them. If you live in riv co. you can go to one of the
county fire stations and they have light blue pamphlet with the info.
on it including a small map of the county with the station numbers on
it. hope this helps for Riverside at least.

2962. Amateur Radio Newsline™ Report 1370 - November 14, 2003

Newsgroup: rec.radio.scanner
Date: 2003-11-20 10:00:25 UTC
From: radionews@aol.com
Message-ID: <20031120050025.27838.00000629@mb-m06.aol.com>
Source record: 24665

Amateur Radio Newsline™ Report 1370 - November 14, 2003

Amateur Radio Newsline report number 1370 with a release date of Friday, November 14, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Internationally sponsored ham radio training begins in Albania, UOSat-14 goes QRT for good and ARISS honors the late Roy Neal, K6DUE, with an on the air -- space to ground event. The details on Amateur Radio Newsline report number 1370 coming your way right now.

(Billboard Cart Here)

**

BREAKING NEWS: AUSTRALIA TO BE CODE FREE

The Australian Communications Authority has announced to QNEWS that as of January First 2004 CW will no longer be a requirement for Amateurs to operate on the HF bands. From Monday November 17th, the ACA website will have the press release under the signature of Dr. Bob Horton. Full details on next weeks Amateur Radio Newsline report. (Q-News)

**

RADIO EDUCATION: AMATEUR RADIO PROGRAM OPENS IN ALBANIA

We told you a few weeks ago that it was going to happen and now it has. Ham radio training is now available in Albania. Jeramy Boot, G4NJH, in the U.K. takes an in-depth look at the new internationally sponsored training program:

--

A unique amateur radio program started in Tirana, Albania the 9th of November. Thirty-four third and fourth-year university students began a five-week amateur radio course using RSGB study material as the reference books.

The course will culminate in CEPT license examinations. It is being run in cooperation with Mr. Spartak Poci, the Albanian Minister of Telecommunications, and the Polytechnic University of Tirana.

A unique part of the program is the way in which amateur radio is being integrated into the regular university courses. The course will not only teach amateur radio up to the RAE Full-license standard, but also the role of amateur radio in society, QSL'ing practices and successful Dxpeditioning.

During the five-week period, ZA1A will be active on many bands and modes while demonstrating amateur radio to local telecom and education administrators, as well as to the students. Multiple locations will be used and several stations may be active at the same time. After the course, all the donated equipment will serve the amateur community.

Jeramy Boot, G4NJH, in Nottingham, the U.K.
--

This unique, one-of-a-kind ham radio training program is supported by Region 1 of the International Amateur Radio Union. Additional assistance comes from several national ham radio societies, the Northern California D-X Foundation, Vertex Standard, Fluidmotion Corporation, Malev Airlines and the Rogner Europark Hotel in Tirana Albania. (RSGB, OH2BH)

**

RESTRUCTURING: SWEDEN MAY GO CODEFREE

Sweden could be next nation to drop the Morse requirement for ham radio licensing and end C-W testing.

The November issue of the Swedish national amateur radio society's magazine, QTC, says -- and we quote: "Soon - very soon - the requirement for knowledge of C-W for High Frequency band access will be dropped for the country's would-be amateurs and current Class 2 amateurs".

SM0SMK is the President of the Swedish national society. He says that they hope the Morse code test requirement will be removed at the end of the year. (GB2RS)

**

HAM RADIO IN SPACE: OSCAR 14 GOES SILENT

One of ham radios most popular emergency communications Easy Sats has gone Q-R-T. This with word from the Surrey Space Center that U-Oh-Sat Oscar 14 has finally reached the end of its mission after an amazing 14 years in day to day service.

Launched in January of 1990, U-Oh-14 was the first 9.6 kilobit per second amateur digital communications satellite. It literally pioneered the packet satellite or PacSat concept.

After about 14 months on-orbit, U-Oh-14 was switched to commercial frequencies for humanitarian service by an organization called Satelife. It was used by them until 1997 when it was returned to Amateur Radio service and configured as an F-M repeater in space.

A failure of one of the cells of its on-board battery supply is keeping the entire pack from recharging from the satellites solar array. This causes the transmitter to shut down shortly after it is commanded on. This situation lead to the decision by controllers to terminate the

micro satellites mission after more than 72,000 orbits of the planet. (RSGB)

**

RADIO HONORS: ARISS TO CELEBRATE THE LEGACY OF ROY NEAL, K6DUE

The Amateur Radio on the International Space Station team will be honoring the memory and the legacy of the late Roy Neal, K6DUE. This, with an operating event involving the crew on the orbiting outpost and hams on the ground. Amateur Radio Newsline's Norm Seeley is here with the details:

--

In a joint release, Frank Bauer, KA3HDO and Sergej Samburov, RV3DR of the ARISS International team say that the event is being held to commemorate Roy Neal's vision and dedication. This, in the development of manned Amateur Radio space communications.

And as a celebration of Roy's contributions ARISS has requested that the current I-S-S crew take to the airwaves the weekend of November 29th and 30th to communicate with as many ground based amateur radio operators as they can. After the initial two days, the operation will continue through the month of December using both voice and packet.

Ham radio from the International Space Station signals will be on the usual frequencies. These are 145.80 MHz as the worldwide voice and packet downlink. That's where you listen.

The worldwide packet radio uplink channel is 145.99 MHz. 144.49 MHz is the voice uplink for the America's and the Pacific while 145.20 MHz is where to call if you are in Europe, Central Asia and Africa.

Roy Neal, K6DUE, died last August 15th due to complications following heart valve replacement surgery. He is very much missed by everyone in the world wide ham radio community especially by us here it the Amateur Radio Newsline where he was a friend and colleague.

The full text of the ARISS International release about this special operation commemorating Roy Neal's contributions to manned ham radio in space is now at our website. That URL is www.arnewsline.org. Scroll down to the new "This Just In" area and you will find it there.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

According to Bauer and Samburov hams making contact with the Roy Neal Commemorative Operation will be eligible for a special certificate. More ham radio in space news later on in this weeks report. (ARISS)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the W9EAR repeater of the EARS Repeater Network serving Indiana, Kentucky and Illinois.

(5 sec pause here)

**
AN ARNEWSLINE(tm) EDITORIAL: AN ANONYMOUS NOTES OR E-MAIL PLEASE

I'm Bill Pasternak, WA6ITF, with a short editorial comment. Actually, its more of a reminder that the Amateur Radio Newsline does not accept anonymous letters and e-mail as valid information or story leads.

Every so often, a letter or e-mail will arrive making all sorts of claims. It might deal will allegations that a ham radio test session is corrupt, or identifying someone as the purported jammer of a net or that a ham is doing business over a local repeater. This past week we received two such notes. One claimed that a repeater was discriminating against a group of individuals. The other claimed corruption in the management of a ham radio convention. Both had something in common -- they were unsigned. And here's our policy in dealing with unsigned correspondence. Ready?

(Sound of actual letters being torn up and toss in the trash basket.)

That's right, you just heard me rip it up and toss it in the garbage can. And the reason is simple. If the person sending the letter or the e-mail does not have the courage to sign it, then the chances are that he or she is attempting to use us and you in a personal vendetta. And friends, we are not going to let ourselves or you to be used in someone's private war. That's been our policy since our days as the Westlink Radio Network and it is still our policy today.

The bottom line. If you are going to send us information you must provide identification and be ready to take responsibility for your words and actions. I you are not willing to do so, please save us the time and effort of doing this -- and tossing it in the trash.

This has been an infrequent Amateur Radio Newsline editorial. In Los Angeles, I'm Bill Pasternak, WA6ITF. (ARNewsline(tm))

**

ENFORCEMENT: ALLEGED TOWER UNBOLTER CAUGHT

A follow-up to a story we aired two weeks ago about a man trying to unbolt power transmission towers in three western states. He has now been captured.

According to news reports, the suspect is identified as Michael Poulin. He claims that his actions illustrate how vulnerable the power grid might be to acts of terrorism. At airtime, charges against him are pending. (Published news reports)

**

ENFORCEMENT: IRLP HARASSMENT

A pair of mid-West hams are being asked to explain their actions their on the air activities. The FCC's Daryl Duckworth, NN0W, tells us who and why:

--

Duckworth: "Two Oklahoma amateurs; Johnny Adams, KD5QJG, of Dell City and Jack Stokes, KE5KR, of Oklahoma City have been queried regarding complaints of deliberate interference and harassment of repeater users on W5QO, 144.650 and 145.250 MHz."

--

The FCC says that at the time the incident occurred, the W5QO repeater was functioning as an IRLP node. Adams and Stokes were given 20 days from the day that they received the FCC's letter to answer the charges. They were also warned that failure to respond could result in the revocation of Amateur station license and suspension of operator privileges. (FCC, RAIN)

**

ENFORCEMENT: HEY YOU LEFT THE RADIO ON

The FCC also wants to know why a ham may have walked away from his car with his rig running as a cross band repeater. Again, the FCC's Daryl Duckworth, NN0V:

--

Duckworth: "A complaint of two hours of interference on September 16th, coming from an amateur transceiver unit, in a car, unidentified, unattended, and operating in crossband mode has prompted the Enforcement Bureau to inquire of the vehicle's owner, KG6QKR, Angel Carballo, of Freemont California. The vehicles was located at Hamilton and Bascon Avenue's in San Jose (California) at the time of the interference to 145.23 and 146.94 MHz."

--

Like Adams and Stokes, Carballo was also given 20 days from the date he received the FCC's letter to file a response. (FCC, RAIN)

**

RADIO LAW: A CLARIFICATION ON EQUIPMENT SEIZURES

Phil Kane, K2ASP, says in the CGC Communicator that the FCC does not confiscate equipment.

Kane, now an attorney in Oregon is the retired District Director of the FCC in San Francisco California. He says that he served many times as an on-scene supervisor during events such as the recent raid on an unlicensed broadcaster where equipment was taken. According to Kane,

seizures are made by the U.S. Marshal Service executing an order of the Federal District Court. Any items taken are held pending court action of forfeiture of the equipment to the Government.

According to Kane, the FCC agents on scene are there only as technical experts. They identify to the Marshals what equipment falls under the purview of the seizure warrant. (CGC)

**

RADIO RULES: THE FEDS ON FRS

Federal government entities have been authorized to purchase and operate radios certified by the FCC in the Family Radio Service. This, according to the May 2003 Manual of Regulations and Procedures for Federal Radio Frequency Management.

The manual says that pursuant to Part 95 Subpart B of the FCC Rules and Regulations, government users will be accorded the same privileges as non-federal users. Also, since FRS users must share each channel and no user is assured protection from interference caused by another authorized user, federal entities may not purchase and operate F-R-S radios for planned communications operations that safeguard human life or property.

The Manual of Regulations and Procedures for Federal Radio Frequency Management is a great publication that has a ton of useful information. The only drawback is that it costs $342.00 new. However it is available for viewing and download, chapter by chapter, at www.ntia.doc.gov/osmhome/redbook/redbook.html (CGC)

**

HAM EDUCATION: NEW ON-LINE HELP FOR INSTRUCTORS

The American Radio Relay League's Field and Educational Services branch has announced a new resource for active Volunteer Instructors. Titled the Online Instructor Primer, it's a new compilation by Linda Mullally, KB1HSV, that's jam-packed with helpful tips, links, and tutorials sure to help instructors eager to try new ideas and approaches. More information about it is at the ARRL website. Just take the link to www.arrl.org/FandES/ead/instructor/oip (ARRL)

**

NAMES IN THE NEWS: PATRIOT NAME CHANGE

Turning to this weeks names in the news. Word that the Patriot DX Association has changed its name to the New England DXCC with a new mission. That of fostering participation in DX'ing and the DXCC program.

The group has also announced the creation of a new operating event called the N-E-D-X-C-C Challenge. According to an October 27th press

release the purpose of the Challenge is to stimulate on-the-air operating activity among club members to make contact with many DXCC countries as possible during the prescribed activity periods. More information is on the web at www.nedxcc.org (Via e-mail)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: SOUND OF A BLACK HOLE

From the science page this question. Did you know that the voice of a black hole is a deep, deep bass? In fact, its 57 octaves below middle C. It is and Jim Meachen, ZL2BHF, has more:

--

The Chandra X-ray Observatory has picked up sound waves for the first time from a cluster of galaxies 250 million light years away. Astronomers at the Institute of Astronomy in Cambridge, England, discovered the sound waves while analyzing the Chandra images of the Perseus cluster. This is an immense grouping of galaxies held in formation by the powerful tug of a super massive black hole.

Andy Fabian is a professor at the Institute of Astronomy. He says that a close study of the fine detail collected by Chandra shows ripples in the X-ray pattern that are caused by sound waves excited by the energy from the black hole.

Fabiam says that the sound produced by the black hole is a B flat, the same pitch as a key near middle C on the piano. But the song of the Presses Black Hole is 57 octaves below that middle C. This is a tone or frequency more than a million, billion times deeper than the limits of the human ear,. Fabian says that makes it the lowest note known in the universe.

For the Amateur Radio Newsline I'm Jim Meachen, ZL2BHF, in New Zealand.

--

Scientists expect more insight on this as the experiments progress. (Science Today)

**

EMERGING TECHNOLOGY: NEW FRACTILE ANTENNA DESIGN

Engineers at Pennsylvania State have developed innovative design methods for a new class of antennas. One composed of an array of fractal-shaped tiles that offer anywhere from a 4 to 1 to 8 to 1 improvement in bandwidth compared to their conventional counterparts.

According to Space Daily, the new broadband antennas are composed of irregular but self-similar, repeated fractal-shaped unit tiles called "fractiles." These "fractiles" cover an entire plane without any gaps or overlaps.

While fractal concepts have been used previously in antenna design, the Penn State research team are the first to introduce a design approach for broadband phased array antenna systems. One that combines aspects of tiling theory with fractal geometry. (ANS, Space Daily)

HAM RADIO IN SPACE: AMSAT UK DONATES TO LAUNCH FUNDS

AMSAT-UK is funding the development of two new amateur radio satellites by donating œ10,000 to each of two projects in the USA and Germany. In accordance with their constitution, at their meeting on Saturday October 25th, AMSAT UK decided to make an immediate donation of œ10,000 to the AMSAT North America's Project Echo Launch Campaign Fund.

Also at the meeting AMSAT U-K decided to earmark another œ10,000 for transfer to AMSAT Germany to support the Phase 3 Express project. This, when a suitable component for funding can be identified.

Project Echo satellite is due to be launched next March 31st. The Phase 3 E Express ham satellite is likely to get a ride to orbit in the 2005 to 2006 time frame. (ANS)

**

BEACON NEWS: UK PROP BEACONS BACK ON

If you are a microwave D-X'er, listen up. This one is for you. It comes from the United Kingdom and says that two of that nations highest frequency beacons are back in full time operation.

Both are part of the South Coast microwave beacon complex. GB3SCX operates on 10 GHz and GB3SCK on 24 Ghz. The two units are again operational following a major rebuild. Both have had their output power increased, raising them at least 10 dB above their previous levels. And there's more.

GB3SCK has been retuned to transmit on 24,048.905 MHz in order to comply with the new 24 GHz bandplan, which will come into force at the beginning of 2004. Also, the GB3SCC which is on 5760.905 MHz has had its keying duty cycle adjusted. It now transmits callsign and location details, followed by plain carrier for a total of 45 seconds. It then stops transmitting for 15 seconds to permit cooling before resuming its operation. Reception reports on any of these beacons go to John Fell, G0API, at his Callbook address. (GB2RS)

**

DX

In D-X, MW0USK reports over QRZ.com that M1DAZ, who is on active duty with the British Forces Broadcast Services in Iraq, has obtained official authority to operate with the callsign YI9DAZ. Darran will be active around the bands for the next couple of weeks using a Yaesu FT-100 and Atas aerial from the Southern part of the country. Most of his operation will be on P-S-K 31 so that he does not disturb his room mate who is the presenter of the early morning radio show. QSL direct to M1DAZ at his home address. (qrz.com)

F6BUM will be active on CW, SSB and RTTY from various regions of Peru. This, between the 5th of November and the 5th of December. He will be using the callsign OA, followed by a district number, stroke F6BUM. (GB2RS)

Also, three operators from Japan will be active from Kathmandu, Nepal, between the 16th and 22nd of November. The callsigns will be 9N7AU, 9N7LN and 9N7SZ. They will operate on 40 to 6 metres using two HF rigs and a 6-metre rig. (GB2RS)

And, a VHF DXpedition to La Palma in Square IL18, should be active through November 19th. This, with DJ6JJ and DL1EJA operating during the ARRL EME Contest and scatter during the Leonids meteor shower. Their station is reportedly using use high power to four 12-element Yagis with full elevation control. For all of these operations please QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: THE TECH SIDE OF THE NYC MARATHON

And finally this week a look at two other ham radio aspect of the New York City Marathon. The way hams organize and the technology that they use. Here's Henry Feinberg, K2SSQ:

--
Last week Communications Coordinator Steve Mendelsohn, W2ML, told us that it takes 411 radio amateurs to keep the New York City Marathon moving along. This week W2ML says that it also takes a lot of well organized ham radio networks to keep the messages flowing:

--

Audio only. Hear the newscast in mp3 at www.arnewsline.org

--

According to Mendelsohn, ham radio communicators are aided by a lot of modern technology. Its science that literally gives them a leg up on the contestants:

--

Audio only. Hear the newscast in mp3 at www.arnewsline.org

--

And this year ham radio expanded the use of its own kind of digital positioning technology:

--

Audio only. Hear the newscast in mp3 at www.arnewsline.org

--

According to Mendelsohn, it's human beings -- trained ham radio communicators that makes for a smooth race.

In New York, I'm Henry Feinberg, K2SSQ, for the Amateur Radio Newsline.

--

Next week, how it all gets put together. Please be with us. (ARNewsline)

**

NEWSCAST CLOSE

FAE LLV#11 <97eda5f.0311192231.c50c856@posting.google.com>...

^ ...there are 6 groups of freqs. for the riverside county
^ sheriffs dept. these are apparently broken down by
^ repeater sites.

Each of those groups covers a geographic area and each group is called a subsystem of the county-wide communications system. The Riverside County system is split by San Jacinto mountain. If you are always on one side of the mountain you won't need the subsystems on the other side. If you are only concerned about one geographic area, Moreno Valley for example, you will only need that one subsystem. But storing all subsystems on your side of the mountain is helpful because they often go down (due to failure or maintenance) so you could shift to a more distant subsystem to hear the same traffic.

^ ... each has a channel "1" in them. If I wanted to monitor
^ more than 1 group of freqs. for a different geographical area.
^ Would i need to put them in a different bank to keep with the
^ channel 1 being first in the bank?

Yes. For example:

BANK 0 Subsystem 2A
Ch000 blank
Ch001 866.31250
Ch002 866.81250
Ch003 867.31250
Ch004 868.31250
Ch005 867.81250
Ch006 blank
Ch007 868.81250

BANK 1 Subsystem 2B
Ch100 blank
Ch101 866.23750
Ch102 866.73750
Ch103 867.23750
Ch104 867.73750
Ch105 868.23750
Ch106 866.78750
Ch107 868.73750
Ch108 867.28750
Ch109 868.26250
Ch110 868.71250

BANK 2 Subsystem 1A
Ch200 blank
Ch201 866.21250
Ch202 866.26250
Ch203 866.71250
Ch204 866.76250
Ch205 867.21250
Ch206 867.71250
Ch207 868.21250
Ch208 867.26250
Ch209 868.26250
Ch210 868.71250

Each of those banks would be set to ED mode and each of those frequencies would also be set to ED mode. The control channel in each subsystem changes as needed by the computer that controls the system, but you need not worry about this since your radio will detect and use the appropriate frequency for control.

^ I found the information for the DEC display for the
^ edacs on another website, at least I have an idea of
^ whos talking now.

That web site probably has some frequencies listed incorrectly. Try the frequencies I have above.

The EDACS system can patch one channel (talk group) to another and both channels will be assigned a new talk group ID during the patch. So if you're listening to a pursuit on the Moreno Valley channel and everyone suddenly disappears, that channel was probably patch together with an adjacent geographic area so that units in both areas can follow the pursuit without having to change channels. To find out where everyone is, set the bank to OPEN (FUNC, 5). When you hear the same traffic press and HOLD the TRUNK button (2 seconds) until it beeps and you will be locked onto that channel (talk group).

Frank

>>them?

AF1's ATC comms are 100% AM... FM, NFM, or WFM is not used by ATC and I bet it never will be used for ATC comms in our life time....

MilSat comms however are mostly FM. And the Orderwire network is WFM.

However your best bet of hearing the callsign "Airforce One" will be on the standard ATC freqs for your area. And usually it will be the VHF, not the UHF military, ATC freqs.

If you go to: http://www.milaircomms.com/audio_library.html and scroll down about 1/2 way you'll see where you can listen to some AF1 comms I had snagged during one of its visits to Florida.

Frank,

Thanks for the info..... the haze is finally beginning to clear.
although I do have one more question. I have Elsinore area programmed
in and the control channel pops up at different times with a lot of
static. I expect it is when they transmit to the MDT. Is there a way
to keep it quiet? I tried the squelch with no luck. I got the freqs
from Trunked Radio website and confirmed they match what you have.

Bryan

Something very similar to that happened here about two summers ago. They were chasing a white pick-up. One reported he was going to get in front of the vehicle. About thirty seconds later, another said, "you're getting in front of me. Can't you tell the difference between a white pick-up and white SUV?" The other said, "sorry about that. What was the color of the vehicle again?" The other screamed "it's the god d**n white pick-up right in front of you." The other one said something in response but I didn't hear what he said - I was too busy laughing.

^ I have Elsinore area programmed in and the control channel
^ pops up at different times with a lot of static. I expect it
^ is when they transmit to the MDT.

MDT/MDC data is transmitted on the other frequencies the same as voice is but the radio doesn't normally send it to audio. MDT/MDC data is not transmitted on the control channel so you would either be hearing control data on the control channel or MDT/MDC data on a data channel.

^ Is there a way to keep it quiet?

You shouldn't be getting that noise and I don't know what it is so I can't answer.

Try entering one of the other subsystems in another bank. Hopefully, with the experience you gain by entering the second subsystem, this will help you figure out what is wrong.

It is worth it to make or buy a serial interface for the radio and to download the freeware program that Don Starr wrote (WIN93.EXE).

Frank

You need to lighten up, James. The thought of a bald man described as having grey hair is indeed funny, regardless of the real intent of the description. There is no criticism of anybody in that. As for the comment about the donut shop, Dwayne (the person who posted the "grey hair" message you replied to with the above) didn't say that - someone else did. And, around here, because cops still do tend to hang out at donut shops on the night shift, those jokes still have some humor left. While local cops may be slightly irritated by those jokes (because there may be some truth in them), I haven't met one yet that is truly that offended.

Nonsense, Dee. I've never, ever, saw HF messed up enough not to support voice on at least some frequency. Regardless, if HF was truly somehow messed up that badly (enough not to support voice on any frequency), CW probably wouldn't get through either (CW doesn't get through that much better).

Inexpensive Emergency Position Indicating Radio Beacon (EPIRB) units, Inmarsat, and other relatively low cost emergency related systems are available for recreational boaters. EPIRB's can be found in boating catalogs selling marine electronics and information about Inmarsat can be found on the web (and at many retail locations). SSB marine radio equipment has a typical range of several hundred miles. Boaters with VHF can also seek assistance from nearby marine vessels, including Coast Guard, Navy, commercial, and private, vessels. The Coast Guard recommends a combination of these for those heading far off shore (VHF, SSB, and EPIRB, for example). CW is not recommended for emergency use today.

Our local cops take a real ribbing on various things... donut shop, etc. IF
you're not using it to insinuate something, they could care less and roll
right along with you on the jokes. They too are human and like to poke fun.
They get their job done and they do it well. There are a few who don't like
them, but gee, can you guess who the crowd consists of? Those who've been
busted.

Can anyone offer comment on first hand experience with the AOR SA7000 wideband antenna? How about a comparable alternative?

Looking for one good antenna for use with ICOM R8500 and very limited mounting space.

I have a Pro-95. I have a couple of Mot and Edacs trunking systems in the region. These are Police trunks in a town about 15 miles from here, and another town about 20 miles away. I am running off of an antenna warehouse super discone. If I scan between 851.0 and 868.9875 I do not pick up any strong repeaters, but otherwise I have no problem receiving as far at 40 miles away on conventional frequencies....much further on Ham. What would be the normal expected transmit range on an 800mhz trunked system/repeater? Since I can't seem to pull in any strong repeaters, that should tell me that I need a better antenna, an 800mhz specific antenna, or to tune the discone somehow. Is my thought process valid? Any ideas?

> Antennas are reciprocal, if they wouldn't work well for transmitting,
> they will work equally poorly for receiving.

The reciprocity principle is usually good physics (but watch out for Faraday rotation). However, the engineering virtues of a good transmitting and good receiving antenna are different. At HF and below, efficiency is much less important for receiving than it is for transmitting. The reason is that the natural noise level is high at these frequencies: at 10 MHz it's >30 dB above thermal, while a good receiver's noise floor is <10 dB above thermal. This leaves plenty of room for inefficiency without SNR degradation. At lower frequencies the natural noise is higher. In practice 10 meters of untuned inverted L into a 500 ohm input suffices to reach the natural noise floor from 100 kHz to 30 MHz with a good receiver.

Back in the days of the omega navigation system, we used tuned 2 meter whips to receive signals from around the world in the 10 kHz band.

For the results of quantitative engineering calculations on this subject, see:

1. It's only a "law" for scalar radiation (like sound), not vector radiation (radio). To be sure, it's a fine approximation for most HF antenna systems, but watch out a microwave frequencies, especially if your antenna system contains a "circulator".

2. In the cases where reciprocity applies you would be correct to say that it requires that the antenna directivity and efficiency are the same for transmitting and receiving. It does not follow, however, that a poor transmitting antenna is necessarily a poor receiving antenna. Efficiency matters much more when transmitting than it does when receiving.

Franks's observations are correct, and can be verified if you do a detailed signal to noise calculation. You could also try the experiment yourself.

Hello All!

I live in San Diego and have been a PBS supporter for many years. An article in this months "On Air" PBS magazine has made my day! The article is on page #3. It is written by the General Manager of the tv station. I have not read the document in question, but it does sound too good to be true. How curious are you? If you live in San Diego, you might find a copy in your local library.

In essence he says that the:

"...[Federal] government will defend your right to crawl up on the roof and put up a BIG, HONKING antenna, despite the protests of nosy neighbors, community planners, rental management companies, local governemnt bureaucrats and other meddlesome busybodies."

Want to know how? Here is the URL:

www.fcc.gov/mb/facts/otard.html

Now you may have to prove to "the opposition" that the antenna you have erected can indeed receive "local" television stations, but that should not be that difficult to do...

2986. Connex 3300 CB radio FOR SALE

Source record: 24687

I have a Connex 3300 radio that i am willing to sell. The radio is in good working condition. It has a roger beep installed, with a switch for it on the right side of the radio. It also has a toy that honks a semi horn 2 time then says "Hey get out of the way stupid!". I have a road king mic for it. It will aslo come with a midland external speaker for it. The radio has Am/Fm band and PA. It has 240 channels.
I had it listed on E-bay and the auction was ended, becuase it is a problematic radio since it is considered a 10 meter radio. But if you are intrested in buying it feel free to E-mail me at "mrnmrscody@aol.com". The radio is about 6 month old, unfortunatley my house burned down sept. 26 and I do not have the original box or paper. Radio was saved since it was in my big truck! I hate to sell it but with everything going on in my life I am forced to sell it.

Such feelings are generally indications of dreaming.

>In essence he says that the:
>
>"...[Federal] government will defend your right to crawl up on the roof
>and put up a BIG, HONKING antenna..."

The government will DO NOTHING! Which means you won't get arrested.
The converse notion of their helping is dreaming in technicolor.

>Want to know how? Here is the URL:

Hi Pismo,

Big honkin' antennas? This completes the picture with dreaming in
surround-sound:
> (1) A "dish" antenna that is one meter (39.37") or less in diameter
> (2) An antenna that is one meter or less in diameter or diagonal measurement
> (3) ... Masts higher than 12 feet above the roofline
> may be subject to local permitting requirements.

Such interpretation of the law, while asleep, has created a vast
culture of lawyers who are willing to do follow-up work.

The trick is to design your antenna to within the law.
1. Choose the highest point of your roof line and erect the allowed
12
foot mast;
2. Place suitable dish or simple TV antenna (remember, local means no
40 element booms);
3. Run your favorite coax STRAIGHT UP (as nearly you can) to the top;
4. Ground to radial system and AC earth ground at bottom;
5. Gamma match to coax shield at the bottom (hidden).

Antenna does not have to be functional. It only needs to look functional (do not point at the northern star, Polaris, for example). If it is functional, you may need to provide for a choke at the feedpoint to the antenna (to separate the two functions - your hobby from your TV). Try to place this effort away from major home interference sources (TV's and computer monitors, fish tanks, fluorescent fixtures, and so on).

To extend the service frequencies in the HF region (because the mast is still too short), then add guy wires attached at the top electrically and physically, which are insulated about halfway down with egg type insulators, or use rope the rest of the way to ground. This top-load skirt may also serve as the choke, but don't count on it without figuring in the time to experiment and confirm.

Well, the back panel says to use a 300mA external supply, so
theoretically it shouldn't draw more than 300mA when charging dead
batteries with the light on and audio present.

Homeowners associations are a good thing! They are basically an agreement that you and your neighbors will follow some clearly defined rules for the specific purpose of maintining optimum property values for everyone. In other words, you won't have to worry about buying an expensive house and having your next-door neighbor decide to use his yard to store a dozen wrecked automobiles while he builds a hot-rod or runs a car-repair business. Common sense should tell anyone that their rights end when they start to infringe on anyone else's, but sometimes you need it in writing. ;^)

Receiving antennas are easily concealed. If you can find mine from the street, you were born on Krypton. I think this is an overly-hyped problem.

Broadcasting antennas are another animal, though. For instance, nobody wants to live next to some clown running a bunch of linear amps through a CB "base station." It will literally be "seen" on well-shielded cable television connections, and is a nuisance. I think that's a lot of what the "external antenna" rules are meant to curb.

2993. Step Size Question ?

Newsgroup: rec.radio.scanner
Date: 2003-11-21 23:40:07 UTC
From: Robert11 <rgsxrose@comcast.net>
Message-ID: <iOKdnfA8i56VPyOiRVn-vw@comcast.com>
Source record: 24694

Hi,

Have a 780
Regarding Step size:

a. Is it the total frequency that has to be divisible, evenly, by the step size?

e.g. 26.970, rather than just the part after the decimal point (e.g. .970) ?

b. Also: where does the incrementing of the step start from ?

Is it the beginning of the search range you set, or is it some other criteria ?

c. Using Butels software for the 780.

If you don't enter a range, but just frequencies in a Bank, but do have Step-Sizes entered, what happens now ?
Are they still used ? How ?

Thanks,
Bob

In answer to your question: "no" however it can be be modified to have

un-interupted coverage from 806-956 MHz.

The following came form the mod site:

http://www.mods.dk/

Note:
It is not lawful to monitor cellular or conventional mobile telephone
conversations.

The 2026 has cellular frequencies deleted at the factory, but restoration is
the easiest ever! - clip one marked wire! All you need is a Philips
screwdriver and wire cutters.

1.. Turn the scanner upside-down and remove the four side screws holding
the bottom cover in place; pull the cover loose and set it back about two
inches out of the way.

2.. Locate the small circuit board at the lower right-hand corner and find
jumper L201. Cut it and slightly separate the break.

3.. Reassemble the radio which now has continuous 806-956 MHz coverage and
30KHz search increments in the cellular band.
2026 is a great radio
metals case
ruggedized for mobile operation
bright beautiful display
loud, quality audio
I've had one for 7 years.

|having your next-door neighbor decide to use his yard to store a dozen
|wrecked automobiles while he builds a hot-rod or runs a car-repair business.
|Common sense should tell anyone that their rights end when they start to
|infringe on anyone else's, but sometimes you need it in writing. ;^)

I happen to subscribe to Fine Homebuilding Magazine and in one of the
latest issues there is some discussion about people who will not make
any changes to their house without considering resale value. They
could be eight feet tall and planning to remodel the kitchen, but will
they think of raising the height of the countertops to make it easier
on themselves? Nooooo. It will affect resale value. They might be
planning to die in the house but they worry that their heirs will have
a hard time selling.

The same mentality prevails in people who willingly submit to the
whims of the homeowners' association board. If I want to leave my
garage door open while I use my woodworking tools or work on my car, I
don't want the guy across the street getting his panties in a bunch
over it. Likewise, I don't want to be told when to mow the grass.

Of course, in my case, across the street is 80 acres of Sonoran Desert
and my landscaping is whatever grows here. (I gave the lawnmower to
the guy that bought my last house.) And I'm not trying to keep up
with Jones either because where I live, *I'm* Jones. Heh heh.

|
|Receiving antennas are easily concealed. If you can find mine from the
|street, you were born on Krypton. I think this is an overly-hyped problem.

If you don't want to hear anything, by all means conceal your antenna.
Antennas are reciprocal, if they wouldn't work well for transmitting,
they will work equally poorly for receiving.

|
|Broadcasting antennas are another animal, though.

Broadcasting is done by broadcasting stations. Broadcasting is
one-way communication.

Hobbists; licensed radio amateurs (hams), and CBers (not to be
confused with hams) are operating transmitting stations designed for
two-way communications.

|For instance, nobody
|wants to live next to some clown running a bunch of linear amps through a CB
|"base station."

Nobody? That is an all-encompassing term. "Few", "some", "not too
many" might be better. Not that I'm in favor of CBers running illegal
stations.

|It will literally be "seen" on well-shielded cable
|television connections, and is a nuisance.

A "well-shielded" system will not "see" anything of the sort. The
problem will more likely be from some upstanding homeowner, who
wouldn't dare leave his garage door open and violate association
rules, making an illegal tap on the cable.

| I think that's a lot of what the
|"external antenna" rules are meant to curb.

No, most antenna restrictions have nothing to do with the possibility
of interference. The restrictions are for the same reasons as not
wanting the garage door open, the grass an inch too high, painting the
house the wrong shade of white, etc...

Dwight,
While I agree with your assertion regarding "some frequency" will certainly be available for HF voice communications. As a long time CW operator I must respectfully question your statement that "(CW doesn't get through that much better)." as I can think of literally thousands of times when the band in question was to 'weak' for SSB, but good ole faithful CW was clicking away on the band. Just some food for thought.
73,
Gary WY9Q

^ transmitting, they will work equally poorly for receiving.

I don't believe that. It's been my experience that an antenna used for receiving will function satisfactorily over a much broader range of conditions (environment, antenna length, etc.) than it will if used for transmitting under those same conditions.

Well, just about ANY antenna is better than a discone, but you should
be able to get at least the closer of the two systems with the rubber
duck, let alone an outside antenna. You may be overloading the 95, and
that's why you can't hear anything. Try scanning the 800 PSB freqs with
the duck and see what happens. Maybe the coax on the discone has taken a
dive and hasn't gotten really bad yet, so the higher freqs are the only
ones affected so far.

For a better antenna, check out:

http://users.cis.net/kingpop/Scanner/Scantenna.htm

Can you hear anything on 800? You should be able to hear control
channels buzzing away somewhere, and that's all the 95 needs to trunk
track. My 93 has no problem getting local trunked when I am 15-20 miles
away with a replacement (MFJ dual band short duck) antenna, the original
got tweaked and I tossed it.

Common sense says there's considerable value in a neighbor who can fix your car. Especially if you need a Sunday afternoon repair! I've done plenty of car work, back when I had a driveway. I got along fine with the neighbors. I suppose fixing their cars helped. We'd talk about cars, laugh at the Cubs, etc. It's the American way!

Sit on a cactus or something, Wes? You seem a little edgy.

Nobody is forced to buy into a neighborhood with covenants. One can do exactly what you have done and buy some distance from your neighbors. That's great if it works out for you.

However, my case is obviously different from yours. The home where I now live is not the home I will own when I retire. I won't need nearly as many bedrooms, etc., and it will be out on an acreage I own (that's currently a little farther than I care to commute to my job). Living in a good neighborhood with covenants makes sense for me right now, because I do want to protect the hefty investment I've made in my home, specifically because I do intend to sell it someday.

Just because covenants aren't ideal for your situation doesn't make them a bad thing. As for your hair-splitting over "broadcasting," it was clear my intent was "transmitting." -- just as it is clear your intent is to act like an asshole.

Frank,

As I mentioned to Wes, nobody forces you to buy into a neighborhood with covenants. I also mentioned that they are not for everybody. In my case, they are a good idea, and one of the reasons I built my house where I did was specifically because I knew what to expect from neighbors as they built nearby.

I don't feel bad that I can't let my yard get waist high, park junk cars on the lawn, or paint my roof purple. Rather, I feel good knowing my neighbor won't.

By the way, I happen to be a Republican Kung-Fu black belt (Dragon Claw 1992) that knows a good, honest mechanic that helped me teach my son how to change the heads on his antique T-Bird in his garage.

So much for your lily-livered weenie who won't fix their own car argument.

I honestly don't understand the hostility in your tone, Frank. What's the real problem?

BDK, thanks for the reply. I think you may be onto something with the coax or antenna. I stuck on a RS telescoping and I got to the nearest trunked system no problem. So, I guess I'll check out the coax first (It's RG6/U), then maybe try the scantenna. The discone is brand new, and the RG6 is a couple of years old. Might try another straight run of coax. Is there an easy way to test for loss on coax? I could just go right out to the discone and run a short piece to the handheld I suppose.

You didn't ionize the air in the range :-)

Seriously, for your purposes you did nothing wrong. Just don't call reciprocity a "law", OK? It's a useful idea of wide applicability, but physics does not require it in general. Calling it a law confuses people.

Many years ago in grad school my advisor would vex visitors to his office with a little disk that looked like a piece of tinted glass. Put a quarter on the table, put the disk on top of it, the quarter looks black. Flip the disk over, put it back on the quarter, the quarter looks shiny. What was the construction of this thing? Some world class physicists couldn't figure it out.

Directivity matters equally for receiving and transmitting. Was your wet string as directive as your other antenna? 2 meters is also quiet enough that there's not much room for inefficiency: in some directions the sky temperature is <200K.

Throw a thin wire with dark brown insulation over a tall tree, up over one side, partway down the other (shaped like a "?"). Tie it in place with nylon fishing line. It will be invisible unless you're very close. Couple to coax with a grounded 9:1 broadband matching transformer. Bury the coax run to the house.

Not only will this be much less conspicuous than a Yagi, but it will outperform your Yagi as a receiving antenna for nearly every signal over the range 100 kHz - 30 MHz. A Yagi is just too specialized an antenna for a listener.

For the listener from ELF to HF these are not manufactured special cases, they are the general case. MW and tropical band listeners often target their regions of interest with Beverages, either temporary or permanent. A Beverage is another antenna that can be very inconspicuous: if your soil's dry you can even bury a Beverage! For listening, a simple broadband antenna like a Beverage is much more practical than a complicated narrowband antenna like a Yagi.

>
> In the general sense of h-f to microwave, I stand by my claim.

For the special case of confinement to a small number of narrow bands (as in ham radio), you are reasonably correct above 10 MHz. To me as a hobbyist listing to LW/MW/SW, that isn't the general case. Of course the game changes when I'm operating a satellite, but that isn't my *hobby*.

I am hostile to the whole concept to a Homeowner's Association. These
are contractual arrangements, and not laws. If a person is penalized,
he doesn't have his usual legal rights. He either pays the penalty,
sells the property or sues the Homeowner's Association. If he sues,

it's the Homeowner's Association which will get the benefit of doubt in Court. Policing power is one of genuine responsibilities of the publicly elected government, and it ought to be done by public employees who are directly answerable to the courts.

And there's the related issue of ownership. Let's say, after another marathon session of listening to SW kooks, I completely lose it and paint my roof purple. It's my roof, isn't it? If it does cause some damage to someone else it should be provable. But the complainer ought to be prepared to put up some sort of evidence.

So, yeah, homeowner's associations ain't for me.

I could go on with my opinions about the public sector getting improperly in the private sector and vice versa.
